

ORMOC CITY DISASTER RISK REDUCTION & MANAGEMENT PLAN 2023-2032

A 10-year Plan for Ormoc City's Transformation into a Fully Disaster Resilient City

MESSAGE FROM MAYOR LUCY TORRES-GOMEZ

During the time I served as Congresswoman for the Fourth District of Leyte, I had already envisioned for Ormoc City to achieve a high level of disaster resilience.

As former chairperson of the House Committee on Disaster Resilience, I had seen and experienced the effects of disasters and how much it sets back and sometimes offsets the economic and social gains that communities worked so hard for.

I have seen industries and local economies wiped out in a span of hours as a result of extreme weather and earthquake.

This Local Disaster Risk Reduction and Management Plan for 2023-2033 is a work in progress, but this forms the seed to Ormoc's attainment of full disaster resiliency.

I commend the CDRRMO, under the leadership of Ciriaco Tolibao for working together and coordinating with the LGU's major departments, as well as partnering with Phivolcs, so that we can have at our disposal, the most detailed and complex disaster data.

I foresee the development of more focused, targeted and advanced PPAs to address the gaps of Ormoc City's disaster resilience.

But for now, let us acknowledge and applaud our achievements towards disaster resilience.

More power you our CDRRMO!

LUCY TORRES-GOMEZ
City Mayor

MESSAGE FROM VICE MAYOR LEO CARMELO J. LOCSIN SR.

Greetings!

Throughout the years, Ormoc has witnessed numerous calamities which brought us to our knees. We have seen how nature and man have stopped us in our tracks, seemingly upsetting the gains we always make. Yet, in all of the challenges, we have also seen how we – the Ormcanons – have risen from these events and have displayed our strength as a people.

Calamities may have hampered our progress from time to time, yet these same calamities taught us valuable lessons which armed us with the foresight and the resolve to get back on our feet stronger and better.

This Local Disaster Risk Reduction and Management Plan is not only our answer to the uncertainties of calamities – both natural and man-made which beset us from time to time, but serves as an institutionalized blueprint to prepare, manage, and stand up in spite these challenges. This is our textbook of innate Ormocanon resiliency.

It is my desire, along with my colleagues in the 16th Sangguniang Panlungsod, that we study and adopt the agenda we have set herein for a city that will always be ready and prepared for any eventuality; a bluebook that is dynamic as our changing times are.

I express the City Council's constant and active support to our disaster management and response efforts especially in further strengthening our mechanisms to enable and empower our people to rise above any calamity.

My warmest congratulations to our City Disaster Risk Reduction and Management team for a job-well done and my fervent prayers for a safe and progressive city.

LEO CARMELO J. LOCSIN SR.
City Vice Mayor & Presiding Officer
16th Sangguniang Panlungsod

MESSAGE FROM REPRESENTATIVE RICHARD I. GOMEZ, DPA

Mabuhay!

My congratulations to the team running our Ormoc City Disaster Risk Reduction and Management Office (CDRRMO) – and the men and women of LGU-Ormoc – for successfully renewing your CDRRM Plan 2023-2033!

When I was Mayor of Ormoc, I had the privilege of working with you on the same Plan. I saw how hard all of you worked on the Plan – and how, as one local government unit, we wanted it renewed to attune our CDRRM systems, programs and projects with the times.

If previously, our CDRRM Plan came prepared to manage any post-apocalyptic effects every time Ormoc got hit with a disaster, this time, LGU-Ormoc has raised the bar higher – the Plan ascertains that Ormoc is capable of mitigating the after-effects of both man-made and natural catastrophes.

This 10-year CDRRM Plan is our testament to the city's future citizenry – that we did not leave them to fend for themselves but that we made certain that our CDRRM systems and infrastructures are calamity-proof.

But we can only do so much planning. The job is half done. Now, we need to implement our CDRRM Plan 2023-2033; and I look forward to working with you on this.

As Fourth District of Leyte Representative, I can assure you that you have my support and admiration.

Kudos!

RICHARD I. GOMEZ, DPA
Representative
Fourth District, Province of Leyte

DEFINITION OF TERMS

"Adaptation" - The adjustment in the natural or human system in response to actual or expected climatic stimuli or their effects, which moderates harm or exploits beneficial opportunities.

"Capacity" – a combination of all strengths and resources available within a community, society or organization that can reduce the level of risk, or effects of a disaster. Capacity may include infrastructure and physical means, institutions, societal coping abilities, as well as human knowledge, skills, and collective attributes such as social relationships, leadership, and management. Capacity may also be described as capability.

"Civil Society Organizations or "CSO" – non-state actors whose aims are neither to generate profits nor seek governing power. CSOs unite people to advance shared goals and interest. They have a presence in public life, expressing the interest and values of their members and others, and are based on ethnical, cultural, scientific, religious, or philanthropic considerations. CSOs include nongovernment organizations (NGOs), professional associations, foundations, independent research institutes, community-based organizations (CBOs), faith-based organizations, people's organizations, social movements, and labor unions.

"Climate Change" – a change in climate that can be identified by changes in the mean and/or variability of its properties and that persists for an extended period typically decades or longer, whether due to natural variability or as a result of human activity.

"Community-Based Disaster Risk Reduction and Management" or CBDRRM" - a process of disaster risk reduction and management in which a risk communities are actively engaged in the identification, analysis, treatment, monitoring and evaluation of disaster risks in order to reduce their vulnerabilities and enhance their capabilities, and where the people are at heart of decision-making and implementation of disaster risk reduction and management activities.

"Contingency Planning" – a management process that analyzes specific potential events or emerging situations that might threaten society or the environment and establishes arrangements in advance to enable timely, effective, and appropriate responses to such events and situations.

"Disaster" – a serious disruption of the functioning of a community or a society involving widespread human, material economic or environmental losses and impacts, which exceeds the ability of the affected community or society to cope using its own resources. Disaster are often described as a result of the combination of: the exposure of the hazard; the conditions of vulnerability that are present; and insufficient capacity or measures to reduce or cope with the potential negative consequences. Disaster impacts may include loss of life, injury, disease and other negative effects on human, physical, mental and social well-being, together with damage to property, destruction of assets, loss of services, social and economic disruption and environmental degradation.

"Disaster Mitigation" – the lessening or limitation of the adverse impacts of hazards and related disasters. Mitigation measures encompass engineering techniques and hazard resistant construction as well as improved environmental policies and public
awareness.

"Disaster Preparedness" – the knowledge by governments, professional response and recovery organizations, communities, and individuals to effectively anticipate, respond to and recover from, the impacts of likely, imminent, or current hazard events or conditions. Preparedness action is carried out within the context of disaster risk reduction and management and aims to build the capacities needed to efficiently manage all types of emergencies and achieve orderly transitions from response to sustained recovery. Preparedness is a based on a sound analysis of disaster risk and good linkages with early warning systems, and includes such as activities as contingency planning, stockpiling of equipment and supplies, the development of arrangements for coordination, evacuation and public information, and associated training and field exercises. These must be supported by formal institutional, legal, and budgetary capacities.

"Disaster Prevention" – the outright avoidance of adverse impacts of hazards and related disaster. It expresses the concept and intention to completely avoid potential adverse impacts through action taken in advance such as construction of dams or embankments that eliminate flood risk, land-use regulation that do not permit any settlement in high-risk zones and seismic engineering designs that ensure the survival and function of a critical building in any likely earthquake.

"Disaster Response" – the provision of emergency services and public assistance during or immediately after a disaster in order to save lives, reduce health impacts, ensure public safety and meet the basic subsistence needs of the people affected. Disaster response is predominantly focused on immediate and sort-term needs and is sometimes called "disaster relief".

"Disaster Risk" – the potential disaster losses in lives, health status, livelihood, assets, and services, which could occur to a particular community or a society over some specified future time period.

"Disaster Risk Reduction" – the concept and practice of reducing disaster risk through systematic efforts to analyze and manage the causal factors of disaster, including through reduced exposures to hazards, lessened vulnerability of people and property, wise management of land and the environment, and improved preparedness for adverse events.

"Disaster Risk Reduction and Management" – the systematic process of using administrative directives, organizations, and operational skills and capacities to implement strategies, policies, and improved coping capabilities in order to lessen the adverse impacts of hazards and the possibility of disaster. Prospective disaster risk reduction and management refers to risk reduction and management activities that address and seek to avoid the development of new or increased disaster risks, especially if risk reduction policies are not put in place.

"Early Warning System" – The set of capacities needed to generate and disseminate timely and meaningful warning information to enable individuals, communities, and organizations threatened by a hazard to prepare and to act appropriately and in sufficient time to reduce the possibility of harm or loss. A people-centered early warning system necessarily comprises four (4) key elements: knowledge of the risks; monitoring, analysis and forecasting of the hazards; communication or dissemination of alerts and warnings; and local capabilities to respond to the warnings received. The expression "end-to-end warning system" is also used to emphasize that warning systems need to span all steps from hazard detection to community response.

"Emergency" – Unforeseen or sudden occurrence especially danger, demanding immediate action.

"Exposure" – The degree to which the elements at risk are likely to experience hazard events of different magnitudes.

"Hazard" – A dangerous phenomenon, substance, human activity or condition that may cause loss of life, injury or other health impacts, property damage, loss of livelihood and services, social and economic disruption, or environmental damage.

"Resilience" – The ability of a system, community or society exposed to hazards to resist, absorb, accommodate, and recover from the effects of a hazard in a timely and efficient manner, including through the preservation and restoration of its essential basic structures and functions.

"Risk" – The combination of the probability of an event and its negative consequences.

"State of Calamity" – A condition involving mass casualty and/or major damages to property, disruption of means of livelihoods, roads and normal way of life of people in the affected areas as a result of the occurrence of natural or human-induced hazard

"Sustainable Development" – Development that meets the needs of the present without compromising the ability of future generations to meet their own needs. It contains within it two (2) key concepts: (1) the concept of "needs", in particular, the essential needs of the world's poor, to which overriding priority should be given; and (2) the idea of limitations imposed by the state of technology and social organizations on the environment's ability to meet present and future needs. It is the harmonious integration of a sound and viable economy, responsible governance, social cohesion and harmony, and ecological integrity to ensure that human development now and through future generations is a life-enhancing process.

"Vulnerability" – The characteristics and circumstances of a community, system or asset that make it susceptible to the damaging effects of a hazard. Vulnerability may arise from various physical, social, economic, and environmental factors such as poor design and construction of buildings, inadequate protection of assets, lack of public information and awareness, limited official recognition of risks.

EXECUTIVE SUMMARY

The Ormoc City Ten-Year (2023-2032) Disaster Risk Reduction and Management Plan (CDRRMP) aims to address the challenges in preparing for, mitigating and preventing the adverse impacts of both natural and human-induced hazards that affect Ormoc City. This plan is pursuant to the legal provisions of Republic Act No. 10121 and anchored on the National Disaster Risk Reduction and Management (NDRRM) Framework and all relevant development plans of the city.

This is a ground-breaking plan in that it takes off from the most detailed disaster risk planning data ever mustered for the City of Ormoc. This data, available in Annex A, was possible through the earnest efforts and coordination of the CDRRMO, CDPO, CAO, CEO, CTO, CENRO, in partnership with the PHIVOLCS. The main feature of this detailed disaster risk planning data is that it allowed for the overlay of hazards and potential costs of damages on a per barangay level. This enables this plan to pinpoint which hazards are most damaging and in which barangay.

Although the disaster risk data is comprehensive, it must be noted that available data is limited to six hazards: (a) flooding, (b) rain-induced landslides, (c) earthquake-induced landslides, (d) storm surge, (e) tsunami and (f) liquefaction. This report provides for narrative analysis on primary hazards that historically, have wreaked havoc on the city, mainly tropical cyclone winds and earth shaking and ground rupture due to earthquake.

The Plan Program, Project and Activities (PPAs) were identified and developed based on the four thematic areas of Disaster Prevention and Mitigation, Disaster Preparedness, Response and Early Recovery and Rehabilitation and classified into Short-Term (1-3 years); Medium-Term (4-6 years) and; Long-Term (7-100 years) timeline. It identifies and assesses various cross-cutting disaster risk reduction and management program and activities that address the city's existing risk and vulnerabilities. The PPAs likewise address the potential impacts of different types of disasters, as well as the detrimental effect of climate change. The framework is anchored on the mutually-reinforcing concepts of resilience and sustainable development.

This plan links science and technology in policy making and programming as innovative solutions in transforming the results of risk assessments into innovative PPAs. These focus on cost-effectiveness, prevention of unnecessary loss of lives, reduction in potential physical damages and ensure effective recovery and rehabilitation towards the ultimate aim of resiliency.

For its results-based monitoring and evaluation, the LDRRM Plan 2023-2032 envisions the integration of the Ten Essentials for Making Cities Resilient (UNDRR) as the basis for monitoring in measuring the city's resilience, overlaid with indicators from the updated NDRRMP 2020-2030 program, project and activities for alignment. Geared towards the expected outcome of transforming Ormoc City into a disaster-resilient city, climate adaptive and growth-inclusive local government driven by risk-informed and environment friendly citizen and local leaders.

METHODOLOGY AND ORGANIZATION OF CDRRMP

Methodology. The LGU of Ormoc City's Local Disaster Risk Reduction and Management Plan (LDRRMP) for 2023-2033 is created pursuant to the Philippine Disaster Risk Reduction and Management Act of 2010 (RA 10121), which mandates the Local DRRM council to: (1) Approve, monitor and evaluate the implementation of the LDRRMPs and regularly review and test the plan consistent with other national and local planning programs; and (2) Ensure the integration of disaster risk reduction and climate change adaptation into local development plans, programs and budgets as a strategy in sustainable development and poverty reduction (Section 11, b, 1-2).

This LDRRMP follows the latest (2022) direction from the National Disaster Risk Reduction and Management Council (NDRRMC), as detailed in its LDRRMP Formulation Guidebook. Accordingly, this plan is segmented into five (5) stages:

Stage 1: Situational Analysis
Stage 2: DRRM Target Setting
Stage 3: DRRM Measures Planning (PPAs Identification
Stage 4: Prepare Local DRRM Fund Investment Plan
Stage 5: Develop a Results-Based Monitoring & Evaluation Plan

A key part of this latest NDRRMC guide is the accomplishment of the following specific forms, aimed at aiding a more structured analysis and LDRRMP formulation. The required forms are as follows:

Stage 1 Forms:
- Form 0-A: Executive Order for the Formation of the LDRRM-PT
- Form 1-A: NDRRMP Checklist Assessment
- Form 1-B: DRRM-Related Plans and Policies
- Form 1-C: Exposure Analysis
- Form 1-D: SWOC-PESTEL Matrix
- Form 1-E: Impact Chain Analysis

Stage 2 Forms:
- Form 2-A: Target Setting

Stage 3 Forms:
- Form 3-A: DRRM Long List
- Form 3-B: DRRM Measures Planning per Thematic Area

Stage 4 Forms:
- Form 4-A: LDRRM FIP

Stage 5 Forms:
- Form 5-A: LDRRMP M_E Matrix
- Form 5-B: Monitoring and Reporting
- Form 5-C: List of M&E Members

Goals. For Ormoc LGU, this LDRRMP will serve as the basis for the implementation of DRRM programs, projects, and activities. With this LDRMMP, Ormoc City's City Disaster Risk Reduction and Management Office (CDRRMO) aims to:

a) Fully understand the disaster risks of Ormoc City, down to the barangay level;
b) Create a plan which aims to prevent and reduce disaster risks, with the ultimate goal in mind of achieving the milestone of full disaster resilience at the operational level; and
c) Lay out LDRRM PPAs with concrete targets and benchmarks to reduce risks, competently respond to disaster events, and effectively conduct recovery and rehabilitation, if and when the need arises.

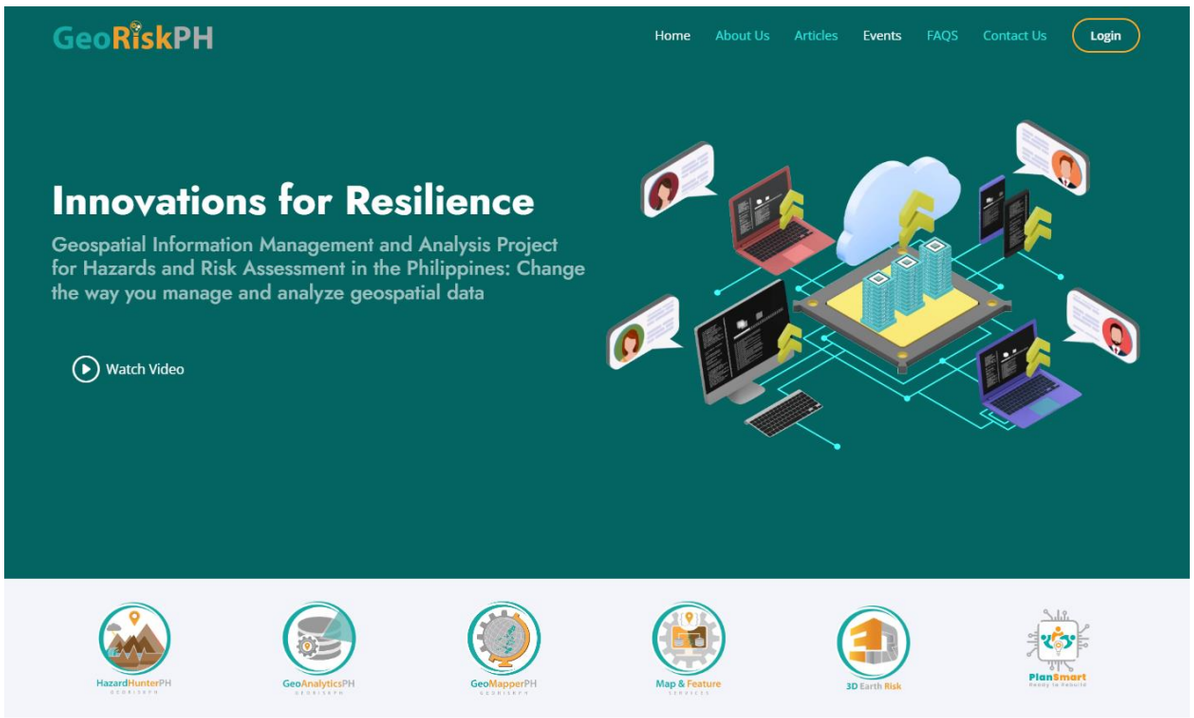

Figure 1: GeoRiskPH Website

Use of GeoRisk PH. One of the key advancements introduced in this LDRRMP is the use of GeoRisk PH. This is a hazards and risk assessment tool offered by the Philippine Institute of Volcanology and Seismology (PHIVOLCS) of the Department of Science and Technology (DOST). This geospatial information management and analysis provides the CDRRMO and LGU Ormoc a more complex and detailed perspective of risk. This platform accommodates the overlay of risk maps versus Ormoc's (a) built up areas and assets, (b) critical facilities, (c) roads and infrastructure, (d) production areas and (e) environmental assets. This critical feature provides targeted and quantified risks per barangay, to better illustrate the magnitudes of risk, giving clear directions as to the prioritization of relevant PPAs to be undertaken in barangays with most critical risk levels.

How this LDRMMP is organized. This LDRRMP is organized in two (2) documents, which are meant to be used side by side. The first and main document contains the narrative of the plan, which explains the rationale, analysis and the plans, programs and activities (PPA)s in detail. The second document serves as the repository of supporting elements comprised of four (4) Annexes. Annex A is a compilation of all the LDRRM Plan Forms, in compliance with the directions of NDRRMC's LDRRMP Formulation Guidebook. Annex B is a compilation of all the tables generated from the results the GeoRisk PH assessment platform. Annex C is a compilation of the figures generated from GeoRisk PH. Annex D is a compilation of the maps generated from GeoRisk PH. Elements from these annexes are referred to in specific sections of the main document, according to their relevance in the discussion.

SP RESOLUTION NO. 2023-112: A RESOLUTION ADOPTING THE ORMOC CITY DRRM TEN-YEAR PLAN (2023-2032)

REPUBLIKA NG PILIPINAS
SANGGUNIANG PANLUNGSOD
LUNGSOD NG ORMOC

EXCERPT FROM THE MINUTES OF THE 43RD REGULAR SESSION OF THE SIXTEENTH SANGGUNIANG PANLUNGSOD NG ORMOC HELD AT THE SANGGUNIANG PANLUNGSOD SESSION HALL, ORMOC CITY HALL BUILDING ON APRIL 24, 2023 IN LIEU OF APRIL 25, 2023

PRESENT:

Roiland H. Villasencio,	SP Member, Presiding Officer "Pro-Tempore"
Nolito M. Quilang,	SP Member, Majority Floor Leader
Rey F. Evangelista,	SP Member
Peter M. Rodriguez,	SP Member
Gregorio G. Yrastorza III,	SP Member
Maria Carmen Jean T. Rama	SP Member
Edmund B. Kierulf,	SP Member
Burt J. Pades,	SP Member, 2nd Asst. Majority Floor Leader
Lalaine A. Marcos,	SP Member
Esteban V. Laurente,	Ex-Officio SP Member, Chapter President, Liga ng mga Barangay ng Ormoc
Joan Marbie C. Simbajon,	Ex-Officio SP Member, Chapter President, Panlungsod na Pederasyon ng mga Sangguniang Kabataan ng Ormoc

ON OFFICIAL LEAVE:

Leo Carmelo J. Locsin, Sr.	(OIC – City Mayor), City Vice Mayor & Presiding Officer
Jasper M. Lucero,	(O.B. – Tacloban), SP Member, 1st Asst. Majority Floor Leader

RESOLUTION NO. 2023-112

A RESOLUTION ADOPTING THE ORMOC CITY DRRM TEN-YEAR PLAN (2023-2032)

WHEREAS, the Sangguniang Panlungsod was in receipt of an Endorsement Letter from the Office of the City Mayor dated February 20, 2023, requesting for an issuance of a resolution adopting the Ormoc City DRRM Ten-Year Plan (2023-2032). It was further requested that this matter be treated as urgent, a copy of the said plan is hereto attached as "ANNEX A" and made an integral part hereof;

WHEREAS, CDRRM Resolution No. 01, Series of 2023 was adopted by the CDRRM Council on February 17, 2023, a copy of said resolution is hereto attached as "ANNEX B" and made an integral part hereof;

WHEREAS, pursuant to Republic Act 10121 IRR Rule 6 Section 4 (7), the City DRRMO, in coordination with concerned national agencies to formulate and implement a comprehensive and integrated LDRRMP in accordance with the national, regional and provincial framework, and policies on disaster risk reduction in close coordination with the local development council;

WHEREAS, adopting a disaster risk reduction and management approach thru holistic, comprehensive, integrated, and proactive in lessening the socio-economic and environmental impacts of disasters including climate change, and promote the involvement and participation of all sector and all stakeholders concerned, at all levels, especially the local community;

Res. No. 2023-112

WHEREAS, incorporating internationally accepted principles of disaster risk management in the creation and implementation of national, regional and local sustainable development and poverty reduction strategies, policies, plans and budgets in order to attain the vision of Ormoc resiliency;

WHEREAS, mainstreaming disaster risk reduction and climate change in development processes thru the sectoral approach such as policy formulation, socio-economic development planning, budgeting, and governance, particularly in the areas of environment, agriculture, water, energy, health, education, poverty reduction, land-use and urban planning, and public infrastructure and housing, among others;

WHEREAS, ensuring that disaster risk reduction and climate change measures are gender responsive and recognizing and strengthening the capacities of LGUs and communities in mitigating and preparing for, responding to, and recovering from the impact of disasters;

WHEREAS, the Local DRRM Council shall approve, monitor and evaluate the implementation of the Local DRRM Plan and regularly review and test the plan consistent with the national and local planning programs;

WHEREAS, there is a need to pass a Resolution adopting the Ormoc City DRRM Ten-year (2023-2032) by the 16th Sangguniang Panlungsod ng Ormoc;

WHEREFORE, on motion of SP Member Gregorio G. Yrastorza III, Chairperson, Committee on Climate Change Adaptation, Disaster Risk Reduction and Management and Resiliency, severally seconded by SP Members Peter M. Rodriguez, Edmund B. Kierulf, Maria Carmen Jean T. Rama, Joan Marbie C. Simbajon and Nolito M. Quilang; be it

RESOLVED, AS IT IS HEREBY RESOLVED, to pass A RESOLUTION ADOPTING THE ORMOC CITY DRRM TEN-YEAR PLAN (2023-2032);

ADOPTED, April 24, 2023.

RESOLVED FURTHER, to furnish copies of this resolution each to His Honor, the City Mayor Lucy Torres Gomez; the City Administrator, Mr. Vincent L. Emnas; the City Legal Officer, Atty. Josephine M. Romero; the City Budget Officer; the City Accountant; the City Treasurer; the President, Liga ng mga Barangay ng Ormoc; CDRRMO; CPDO; CSWD; CHD; the City Local Government Operations Officer, DILG; and other offices concerned – all in Ormoc City.

CARRIED UNANIMOUSLY.

I HEREBY CERTIFY to the correctness of the above resolution.

CDRRMC RESOLUTION NO. 1, SERIES 2023: A RESOLUTION APPROVING THE ORMOC CITY DRRM TEN-YEAR PLAN (2023-2032) AND ENDORSING THE SAME TO THE 16TH SANGGUNIANG PANLUNGSOD

Republic of the Philippines
CITY DISASTER RISK REDUCTION & MANAGEMENT COUNCIL
Ormoc City

Excerpt from the Minutes of the First (1st) Quarter City DRRM Full Council Meeting held at the 2nd floor, Multipurpose Hall, New Ormoc City Hall on February 17,2023 at two o'clock in the afternoon.

CDRRMC RESOLUTION NO. 01
Series 2023

A RESOLUTION APPROVING THE ORMOC CITY DISASTER RISK REDUCTION AND MANAGEMENT TEN-YEAR PLAN (2023-2032) AND ENDORSING THE SAME TO THE 16TH SANGGUNIANG PANLUNGSOD FOR ADOPTION

WHEREAS, adopting a disaster risk reduction and management approach thru holistic, comprehensive, integrated, and proactive in lessening the socioeconomic and environmental impacts of disasters including climate change, and promote the involvement and participation of all sectors and all stakeholders concerned, at all levels, especially the local community;

WHEREAS, incorporating internationally accepted principles of disaster risk management in the creation and implementation of national, regional, and local sustainable development and poverty reduction strategies, policies, plans, and budgets in order to attain the vision of Ormoc resiliency;

WHEREAS, mainstreaming disaster risk reduction and climate change in development processes thru the sectoral approach such as policy formulation, socioeconomic development planning, budgeting, and governance, particularly in the areas of environment, agriculture, water, energy, health, education, poverty reduction, land-use and urban planning, and public infrastructure and housing, among others;

WHEREAS, ensuring that disaster risk reduction and climate change measures are gender responsive and recognizing and strengthening the capacities of LGUs and communities in mitigating and preparing for, responding to, and recovering from the impact of disasters;

WHEREAS, the Local DRRM Council shall approve, monitor, and evaluate the implementation of the Local DRRM Plan and regularly review and test the plan consistent with the national and local planning programs;

NOW THEREFORE, on motion of CDRRM Council member, Engr. Raoul Cam of City Planning & Development **Office** and jointly seconded by Ms. Maribel Gucela of CSWD and Dra. Sarah Q. Hermoso from the City Health Department, Be it;

RESOLVED AS IT IS HEREBY RESOLVED, to pass a Resolution **APPROVING THE ORMOC CITY DISASTER RISK REDUCTION AND MANAGEMENT TEN-YEAR PLAN (2023-2032) AND ENDORSING THE SAME TO THE 16TH SANGGUNIANG PANLUNGSOD FOR ADOPTION.**

1 | 1st Quarter CDRRM Council Meeting: 17February2023

RESOLVED FURTHER, to furnish copy of this resolution to the 16th Sangguniang Panlungsod to request for its approval, and to the City Planning & Development Office, Local DILG Office, Office of Civil Defense-Region 8, and all other agencies concerned for information and guidance.

"RESOLUTION APPROVED UNANIMOUSLY" this 17th day of February 2023, Ormoc City, Philippines.

I HEREBY CERTIFY to the correctness of the foregoing resolution.

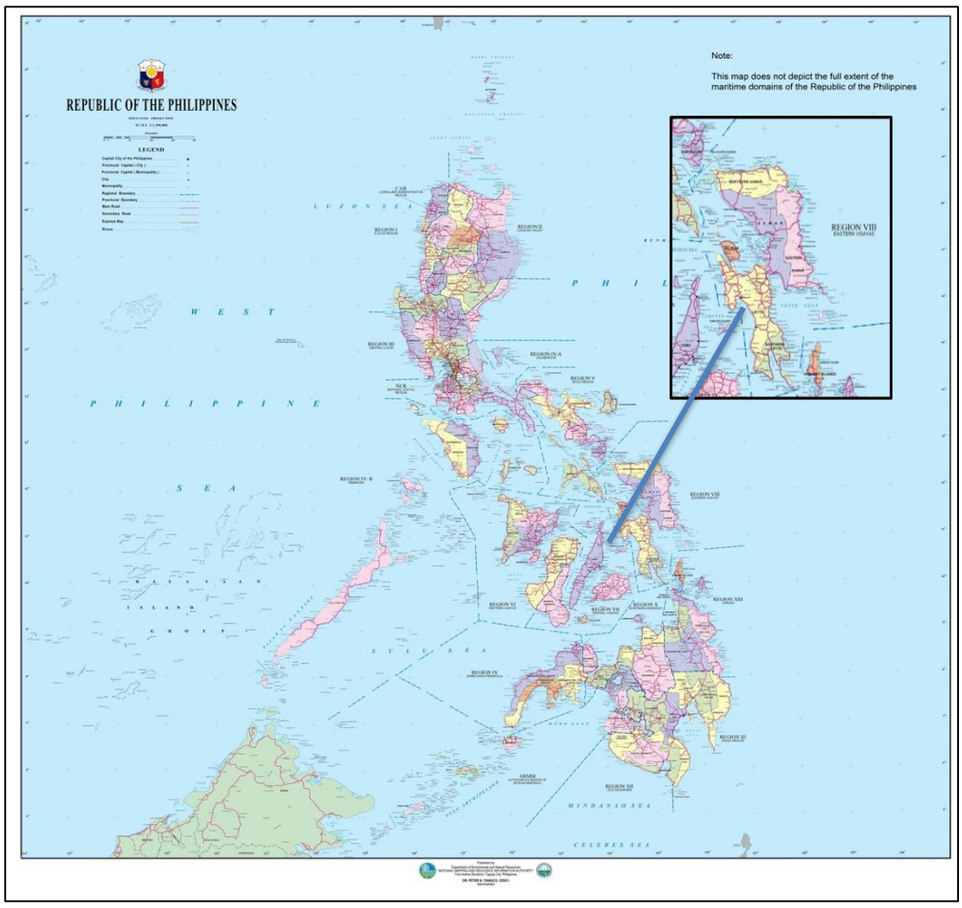

CIRIACO E. TOLIBAO II, MPM
Secretariat
Ormoc City Disaster Risk Reduction and Management Council

Attested/Approved:

HON. LUCY TORRES GOMEZ
City Mayor and Chairperson
Ormoc City Disaster Risk Reduction and Management Council

CDRRMO	OID	14	4	25

CHAPTER 1: SITUATION ANALYSIS

Map 1. Geographical Location of Ormoc City

BRIEF BACKGROUND OF ORMOC CITY

Rationale. In the conduct of a situational analysis of Ormoc City in the context of disaster risk and resilience, it is essential to establish what assets are at risk. To this end, the following brief discussions account for the most basic elements that have been affected previously by hazards and continue to be at risk now and in the future, if no reparative actions are taken.

Historical background. Before the Portuguese navigator, Ferdinand Magellan reached Leyte in 1521, a handful of Malay families lived in a small settlement called "Ogmok," an old Visayan term for lowland or depressed plain. "Ogmok" was also the name of a spring located between the present barangays of Donghol and Mahayag. The name Ormoc, evidently, is the variation of the original name and came into use with the coming of the Spanish *conquistadores* and the migration of people from the neighboring towns and islands to settle in its fertile plains.

The native Malay had some well-developed trade and commerce with the Chinese, Javans and Indonesians who frequented the islands in their junks, vintas, and sailboats. Pigafetta, the Spanish historian, mentions "Ogmok" in his chronicles as one place in Leyte where Magellan visited in search of food and water in March 1521.

Ormoc is a first-class independent component city in the Province of Leyte. It is the first non-provincial chartered city in the Philippines through Republic Act 179 of 1947 and by Presidential Proclamation No. 42.

Geography. Ormoc is the largest city in the Province of Leyte, with a total land area of 464.30 square kilometers (sq. km.). From the north, it is bounded by the Municipality of Kananga. In the northwest, it shares borders with the Municipalities of Matag-ob, Palompon and Merida, and in the northeast with the

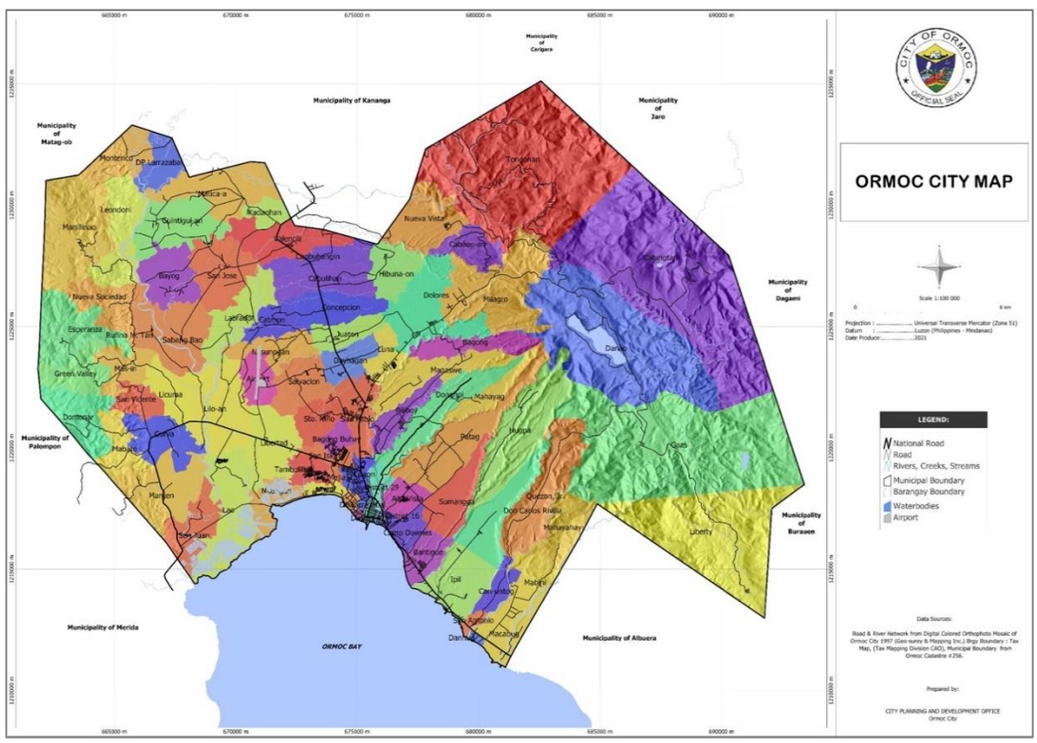

Municipalities of Jaro, Dagami and Burauen. South of Ormoc City lie Ormoc Bay and the Municipality of Albuera.

It is located in the western coast of the Island of Leyte, facing the eastern side of the Province of Cebu. High mountain ranges separate Ormoc from the eastern portion of Leyte, where the provincial capital of Tacloban City sits 109 kilometers (kms) away. It is 45 kms from nearby Baybay City and 129 kms from Maasin City. To add to its geographical context, Ormoc is 555 kilometers (kms) from the nation's capital of Metro Manila, 115 kms from the Province of Cebu and 240 kms from Davao Region. At the head of Ormoc Bay, the city's terrain is mostly of gently rolling plains. Almost half of the city consists of flat lands known as the Ormoc valley. The remainder is hilly and mountainous with an elevation of 1,300 meters above sea level. Map 2 below illustrates the topography of Ormoc City.

Political subdivision. The City of Ormoc is part of the Fourth District of Leyte. One of the distinctive features of the city is that it is subdivided into 110 barangays, which vary widely on various criteria. According to the Philippine Statistics Authority (PSA), 41 barangays are classified as urban, while 69 are classified as rural. In terms of location, 16 barangays are considered coastal, of which,10 are urban-coastal (Alegria, Bantigue, Batuan, Camp Downes, Can-adieng, District 1, District 2, District 12, Linao and Punta) and 6 rural-coastal barangays (Danhug, Ipil, Lao, Macabug, Naungan and San Antonio).

The 110 barangays are even more contrasting in terms of land area and population. The disparity in land area per barangay is very evident in *Map 3- Ormoc City and its Barangays* (below) and the wide range of population per barangay is presented in *Figure 2- Ormoc City Population per Barangay, 2023 and 2032* (below).

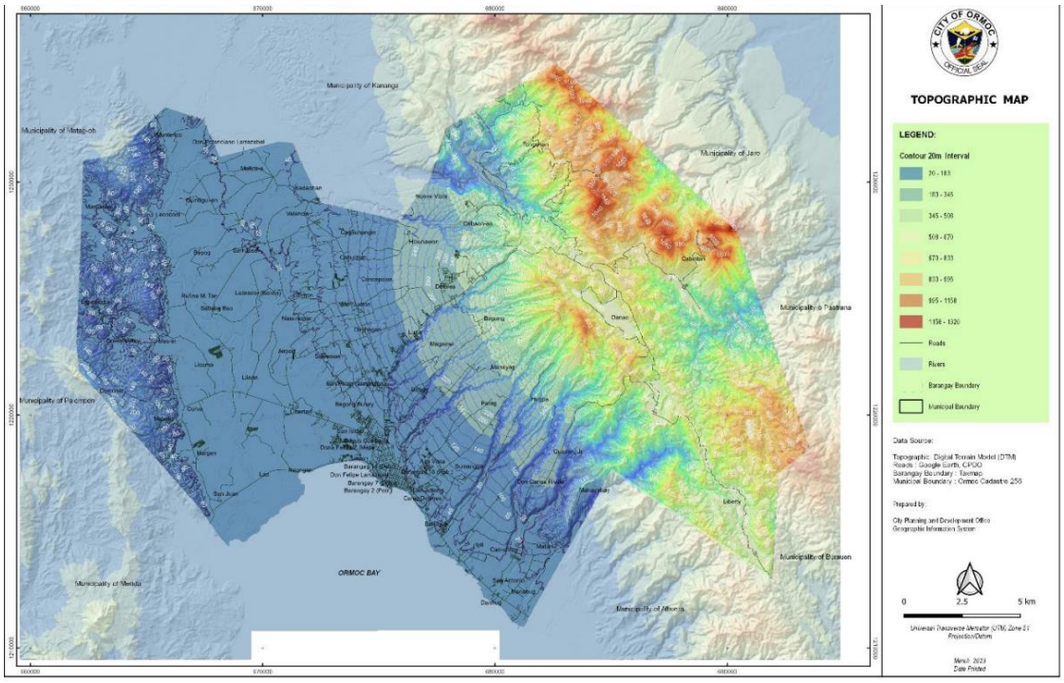

To address the issues resulting from such disparity, LGU Ormoc conducted a plebiscite to decide on the merger of 28 small barangays into 3 super barangays. However, this effort requires an act of Congress to take effect. Rep. Richard I. Gomez has filed a bill as early as October 2022 to establish the three (3) merged super barangays.

Map 2. Ormoc City with Barangays Map

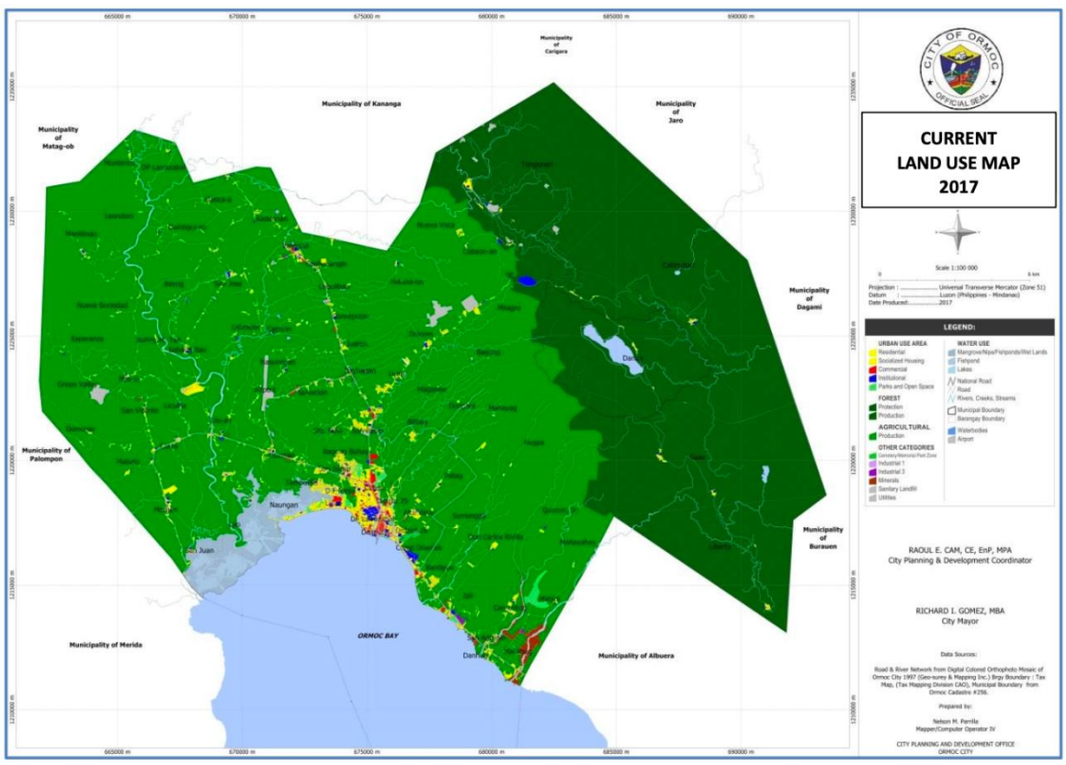

Topography. The topography of Ormoc City is characterized by a wide range of terrain. The eastern portion is generally hilly and mountainous, reaching a peak of 1,000 meters above sea level. On the other hand, its western and southwestern portions range from sea level to undulating lands that form the Ormoc Valley. This topography lends portions of the city to recurring floods and landslides. The city is host to a number of inland bodies of waters including the Danao Lake Natural Park, Janagdan Lake, and

Kasudsuran Lake. Pagsangaan River traverses from northern boundary towards Ormoc Bay. The city core is enveloped of Anilao and Malbasag rivers.

Map 3. Ormoc City Topographic Map

Land Use. The convergence of hazards and land use is the first condition for disaster risk. If there are no human settlements, activities or assets in a certain location, then there is no disaster risk. Map 4 below shows the latest available land use map for the City of Ormoc.

Map 4. Ormoc City Land Use Map (2017), (CLUP)

Ormoc City is predominantly an agricultural city. As shown in Figure 2, 54% of its land is classified as agricultural zone, 70% of which is used as agricultural production areas.

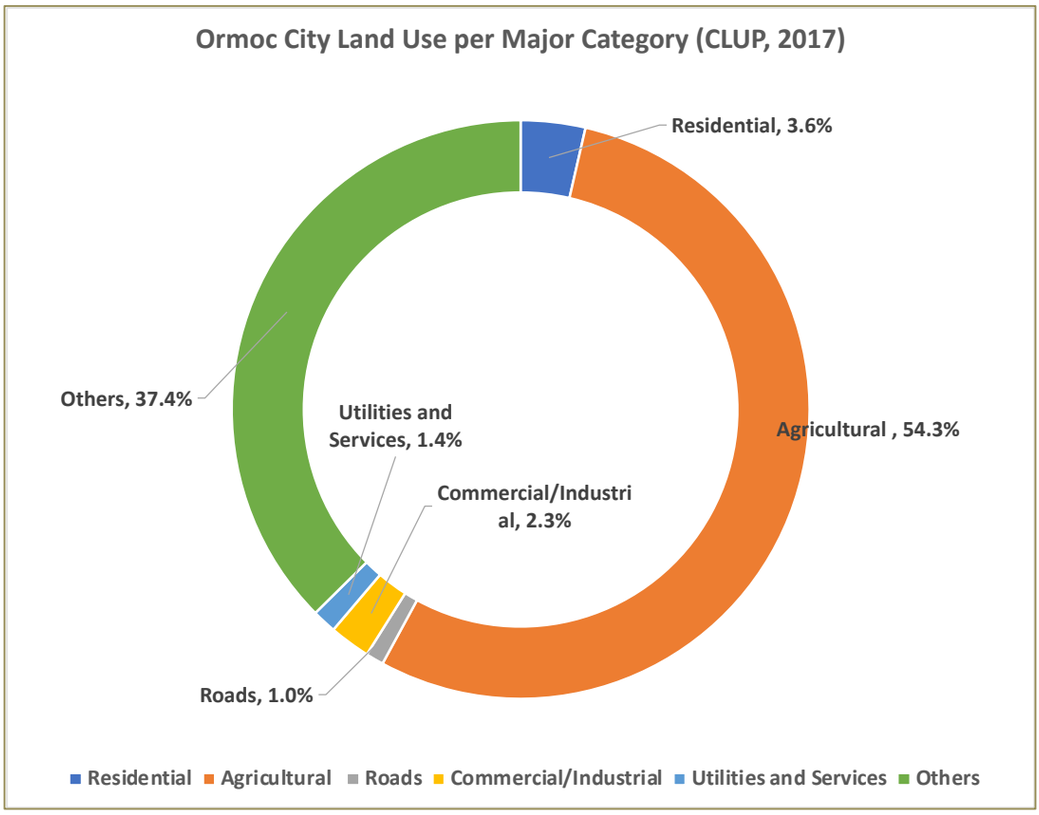

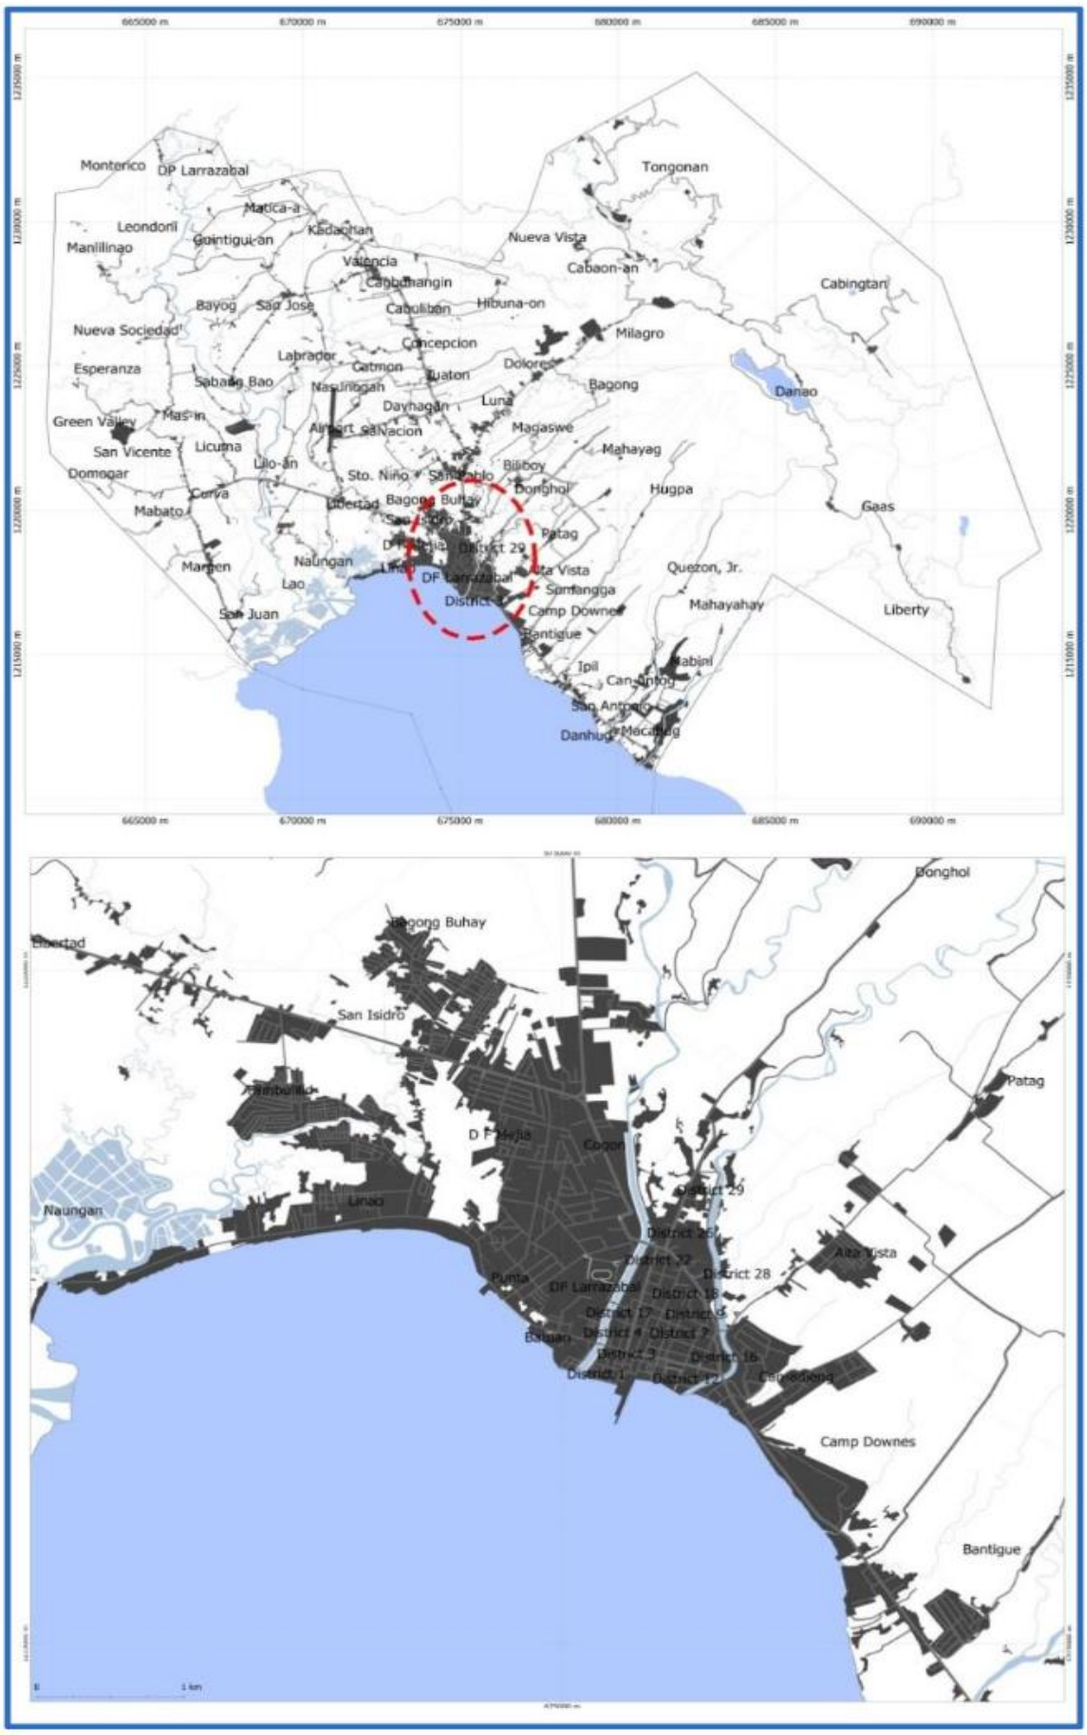

Figure 2. Ormoc City's Land Use per Major Category (CLUP, 2017)

Land use is densely concentrated at the city center. Built-up areas comprise 35.42 sq km or 7.63% of the city's total land area (see Map 5). Half of the built-up areas are concentrated in the población and are facing Ormoc Bay. Urban land uses include commercial, residential, institutional, industrial, open spaces and special land uses.

Demographic trends. It is essential to note the city's demographic trends, as the safety and well-being of the Ormocanon population is most at risk during natural hazard events. According to PSA, in 2015, 27% of the population resided in urban barangays, while the majority of Ormocanons (63%) resided in rural barangays. The city's population growth rate shows an increasing trend, pegged at 2.17% in the PSA 2010 census, and 2.26% in the 2015 PSA census. The Ormoc City Planning and Development Office (CPDO) estimates the city's 2023 population at 241,692 individuals and 56,208 households. This figure is expected to reach 276,839 individuals and 64,381 households by 2032, which translates to a 13% increase in population within a decade

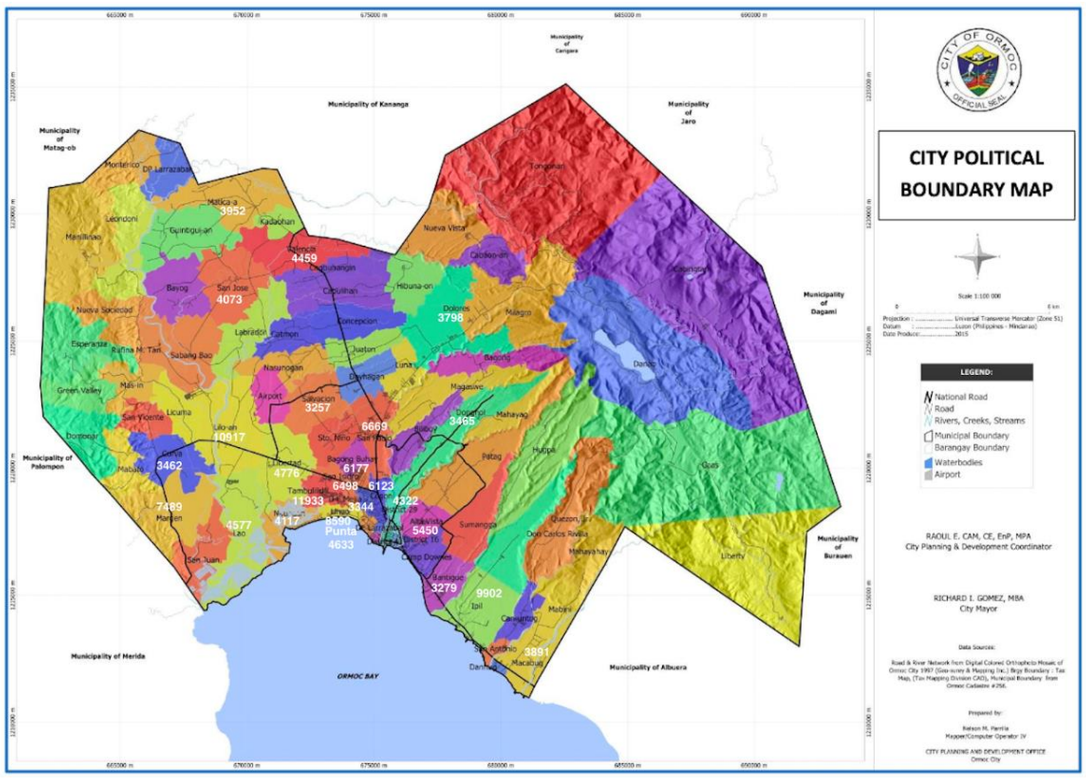

Map 5. Ormoc City Built-up Areas Map (CLUP)

.

In the 2015 census, 51% of the population was male and 49% female. Ormoc City's working age group stood at 63% in 2015, with a dependency rate of 37%. Figure 3 below shows the disparity is populations per barangay in 2023 and 2032.

Human settlement is not evenly distributed in Ormoc City. The most populous barangay, Tambulilid has 11,933 residents, while the least populous barangay, Barangay 3 has 15 residents. The top 45% of barangays, in terms of population, is home to 80% of the entire city. Map 6 illustrates the concentration of the top 50 most populous barangays, concentrated at the poblacion area.

Map 6. Ormoc City's political map with 2023 population figures of 50 most populous barangays

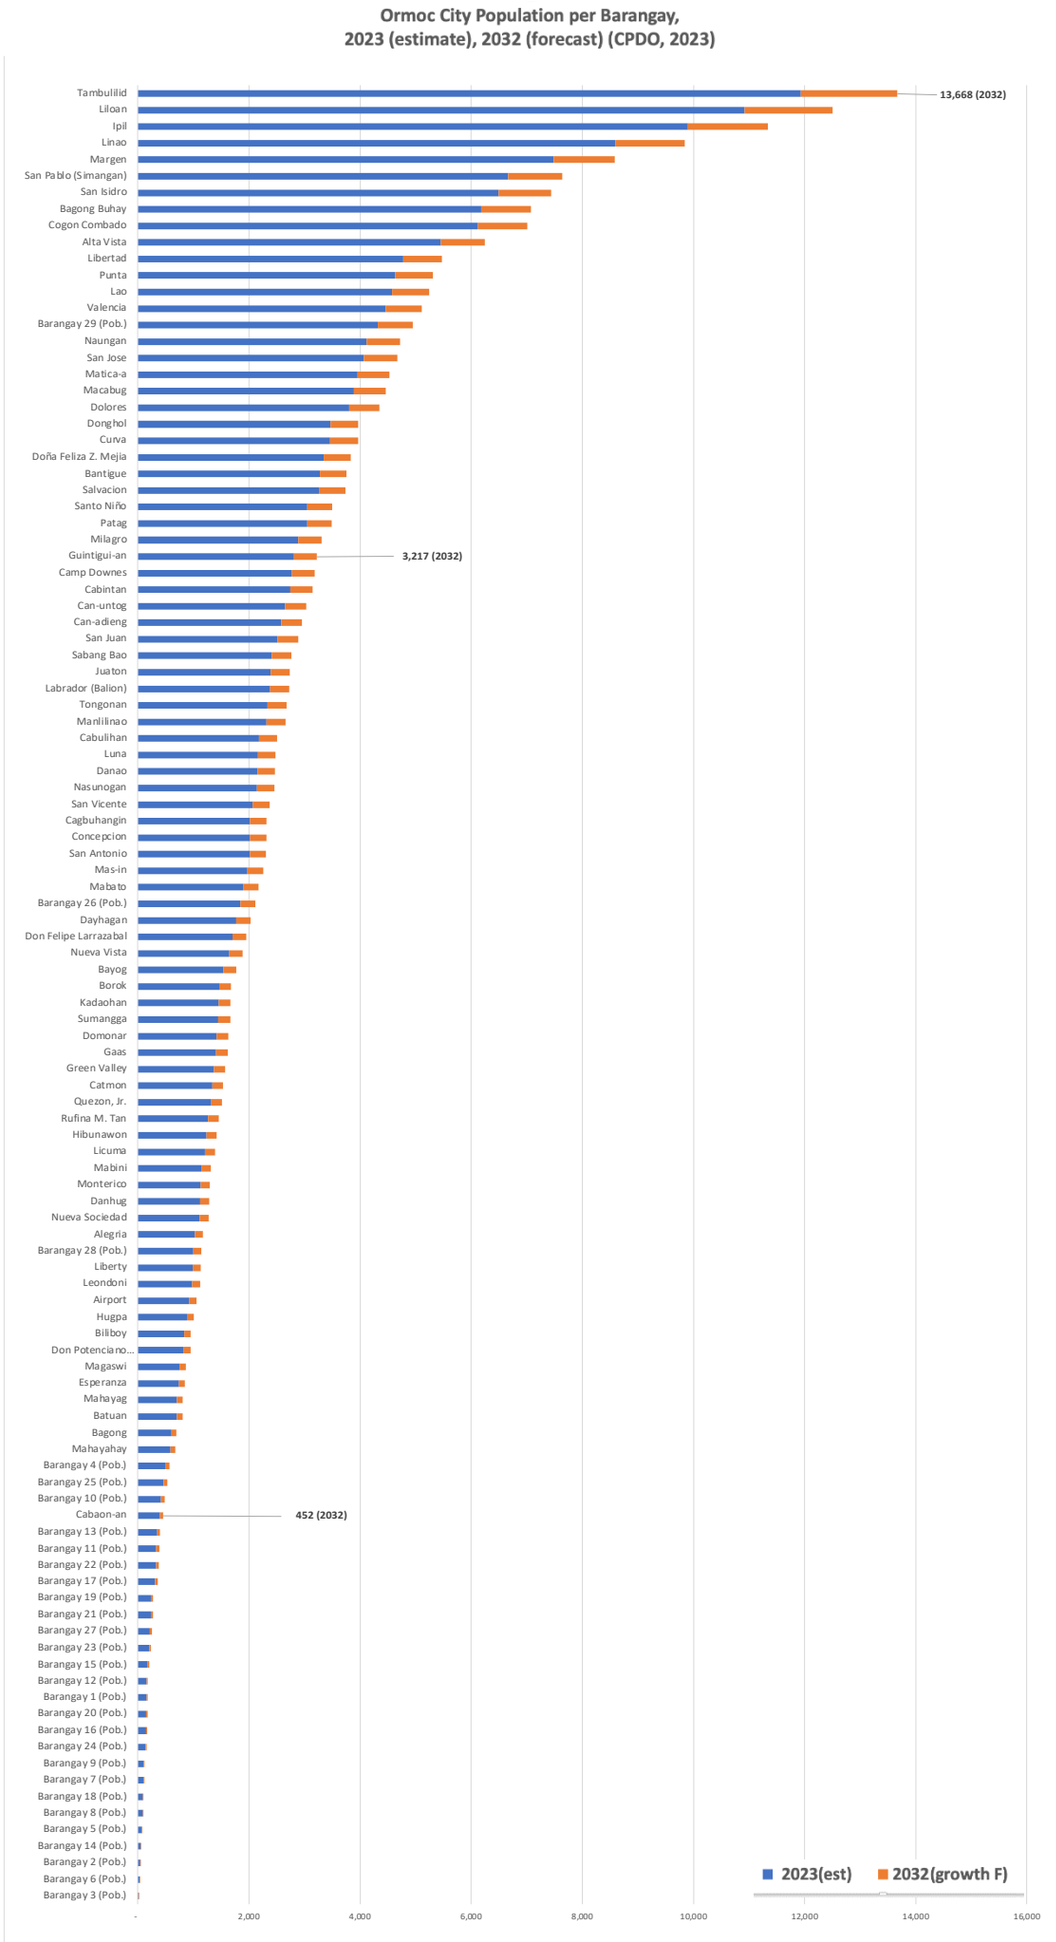

Figure 3. Ormoc City Population per Barangay, 2023 (estimate) and 2032 (forecast) (CPDO, 2023)

Economy. Ormoc is the economic, cultural, commercial, and transportation hub of western Leyte. It is likewise considered as one of the regional centers of Region VIII, or the Eastern Visayas Region. It is a port city Ormoc and is a popular convergence point for business, trading, manufacturing and industry.

The city's economic base is transitioning from agriculture to commerce with its economic value and employment, in accordance to spatial development strategy. Business Permits, Franchising and Licensing Office records in 2017 state that there are 6,779 businesses registered categorized into 171 banks, 189 manufacturing, 2, 078 retails and 4, 341 services. These include new registrations for 16 banking and financing institutions, 46 manufacturing, 522 retails, and 789 services. The capital asset of the service sector is valued at PhP 40.6 billion, retail sector at PhP 7.7 billion, manufacturing at PhP 5.8 billion, while banks at PhP 754 million.

The service sector employs the most with 8,140 males and 3, 542 females, while retail employs 2,943 males and 2, 821 females. A total of 5,470 farmers were registered as per 2021 Registry System for Basic Sector in Agriculture updates while 5,295 Fisherfolks under the Fisher Folks registration system (FishR).

The city accounts for significant share of food production in Eastern Visayas serving as a natural "bagsakan" (drop-off point) for fishing and farming produce in Leyte. Figure 4 shows the production areas per hectare and production per hectare of basic crops.

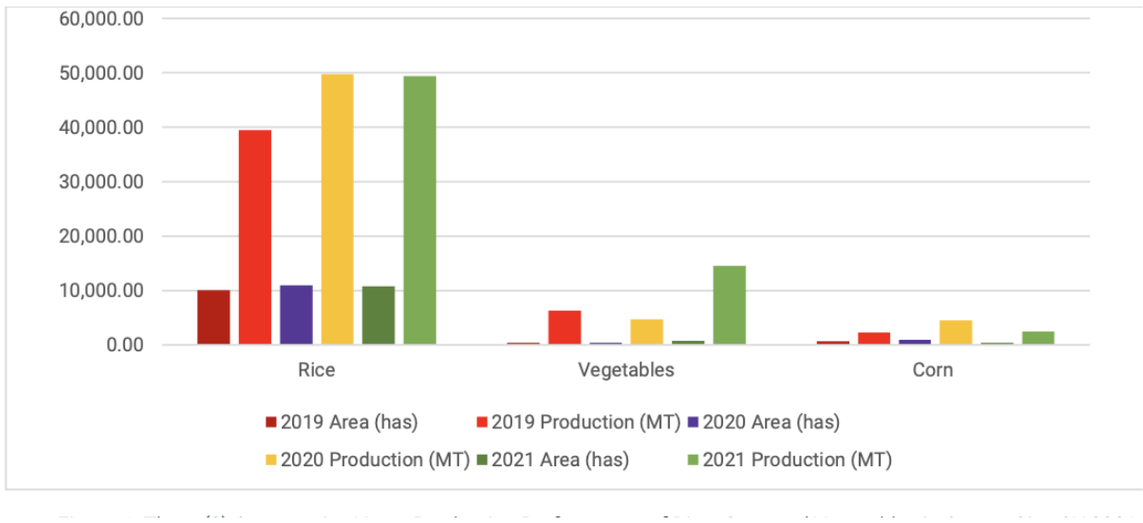

Figure 4. Three (3) Consecutive Years Production Performance of Rice, Corn and Vegetables in Ormoc City, CY 2021

Critical facilities. Critical infrastructures in the city include the Ormoc Airport, the Ormoc Port terminal, the Leyte Geothermal Production Field (LGPF) in Barangay Tongonan and the main Hospitals (in Barangay Can-adieng, Barangay Cogon, Barangay District 8, Barangay District 13). Increasing the inflow and outflow of goods, services, and people is facilitated with the presence of commercial and transportation facilities – Ormoc Port (2,670.50 sqm) operated by the Philippine Ports Authority, and currently under renovation Ormoc Airport (52 ha) operated by Civil Aviation Authority of the Philippines.

Tongonan Geothermal Power, the biggest in Asia supplying both to the region and Luzon, is operating in the city shared with the Municipality of Kanangga. Its five (5) power plants produce 708 megawatts, which is 37% of the estimated gross potential reserves of the country at 5,000 megawatts. The power plants also accounts 60% of the country's installed capacity in the southern parts of Luzon and the Visayas of via sub-sea cables.

Water production. The main water source for the city is the Ahag Water Treatment Plant located Sitio Ahag, Barangay Patag, with two (2) water clarifiers, designed to deliver clean and potable drinking water, 24/7 rain or shine. The water treatment plant operation meets the water quality parameters prescribed in the 2007 Philippine National Standard for Drinking Water (PNSDW).

As of 2021, the waterworks office operates one surface water source at Sitio Ahag. Brgy Patag; 26 deep wells (Ahag mening, Ahag Gallery #1, Ahag Gallery #2, Airport, Alta Vista, Bantigue, Carlos Tan, Carlota, Cogon, Concepcion, District 28, Dolores, Fire Station, Ipil, Lao, Luna, Maternity, Mejia New, Mejia Old, Nasunugan, San Isdiro, San Pablo, Slaughter, Tambulilid, Valencia, and Villa Theresa); 12 spring sources (Ahag, Cambantog, Dolores, Guintuigian, Ipil, Mabato Lanipga, Mabato Proper, Mas-in, Quezon Jr. Sumanga, To-on And Valencia); and 2 Artesian well sources (Well 4 and Cogon). The water sources are manned and treated 24 hours a day 7 days a week. The produced water is in accordance with the Philippine National Standards Drinking Water. Regular testing has been conducted using in house resource and accredited water testing facilities to ensure that the water supplied is potable and safe for human consumption.

Table 1. Sites of 26 deep wells for Ormoc's water supply

Dolores	Mabato Proper	Sumangga
Guintuigian	Cambantog	To-on
Ipil	Mas-in	Valencia

DISASTER RISK ASSESSMENT AND DAMAGE LOSS EVALUATION

Table 3. Top Six (6) Most significant disasters in Ormoc City

Year and Disaster Event	Impacts			Estimated Cost of Damages (Php)
	Dead	Missing	Injured	
2021: Typhoon (TY) Odette	0	0	3	Php 159,676,397.89[1]
2019: Typhoon (TY) Ursula	0	0	59	Php 159,198,509.59[2]
2017: Magnitude 6.5 Leyte Earthquake	2	0	329	Php 330,764,454.02[3]
2017: Tropical Storm (TS) Urduja	3	0	0	Php 187,898,674.48[4]
2013: Super Typhoon (STY) Yolanda	38	0	5089	Php 8,000,000,000,000.00[5]
1991 : Typhoon (TY) Uring	4922	> 3000	3020	Php 604,000,000.00[6]

One of the key responses to this most devastating disaster was the construction of the
Given the table above, it is evident that flood/flash floods (1991) have a high damage cost to the environment in the city, with 12 bridges totally or partially destroyed and claiming 4,922 deaths.

However, in comparison with Super Typhoon Yolanda (2013), it can be observed that the casualty count lowered significantly. This can be attributed to the community, with the government's interventions having

[6] Source: CIty DRRM Plan 2016-2020

somewhat impacted. But the damages incurred were way beyond repair, and it is evident that this time around, investment in resilient infrastructures/homes was not yet a priority.

While several disasters have passed, the city is yet to experience another flash flood, as the flash flood that occurred 31 years ago has a return period of 100 years.

Past incidents must be revisited to serve as a foundation for moving toward resiliency.

DISASTER RISK PROFILE OF ORMOC CITY

Ormoc's most significant disaster events. Ormoc City is a veteran and survivor of a number of highly intense disasters in the most recent decades. To be able to improve on the city's disaster resilience, preparedness, response and management, it is critical to note and understand the impact of past disasters that occurred in Ormoc City. Table 3 highlights the biggest disasters in the past decades and summarizes the damages in terms of (a) human life, and (b) built structures, economy and infrastructure.

Flashfloods, 1991. On November 5, 1991, Typhoon Uring struck the city, which caused the 1991 Flashfloods, which to date, is the deadliest disaster to occur in the city, with a total of 4,922 casualties, and about 3,000 injured. This occurred 31 years ago when the city did not have any significant disaster resilience infrastructure in place. Heavy rainfall caused rivers to swell, resulting in massive landslides and flooding, especially those in downstream areas. The "Ormoc Tragedy" decimated about 14,000 houses and damaged property estimated at 600 million pesos. In terms of infrastructure, 12 bridges were partially damaged, costing about 3 million pesos.

Typhoon Yolanda, 2013. In November 2013, Ormoc was also a victim of Typhoon Yolanda, one of the strongest typhoons ever recorded in history, with a high wind speed of 255 kilometers per hour (kph). The super typhoon's diameter was a record 600 kms, which from satellite images, covered the entire Philippine archipelago. Although most of the casualties came from Tacloban City, Ormoc was not spared, with total deaths of 38 and over 5,000 injured. The bigger impact, however, was the damages to property, infrastructure and the economy. To date, the damages from Typhoon Yolanda remain unparalleled in Ormoc and in most disaster-prone areas in the Philippines.

Earthquake, 2017. The year 2017 made way for two massive disasters to hit Ormoc City. At 4:03 PM on July 6, Thursday, a strong earthquake of magnitude 6.5 shook the island of Leyte. The epicenter was located 15.5 km northeast of the city and with a focal depth of two km. The earthquake was generated by the movement of Leyte Segment of the Philippine Fault. Small-magnitude earthquakes followed afterwards, and as of the next day, 297 aftershocks had been recorded by the PHIVOLCS seismic monitoring network. According to the NDRRMC, the physical damages included 1,462 totally collapsed houses, 2,131 partially collapse houses, and 113 school buildings.

Typhoon Urduja, 2017. On December 14, Tropical Storm Urduja hit the Eastern Visayas region. Urduja's winds were relatively weak—with maximum sustained winds of approximately 75 kph near the center, and Tropical Cyclone Wind Signal (TWCS) No. 1 was raised in areas in Regions V, VI, VII and parts of Region VIII, including Leyte. However, the devastation of Urduja did not arise from wind speed but rather the amount of rainfall that came with it. Heavy rains triggered flashfloods and landslides, which prompted Ormoc LGU to pass Resolution No. 354 declaring a state of calamity for the city.

Typhoon Ursula, 2019. On Christmas Day in 2019, Typhoon Ursula hit Regions V, VI and VIII, with wind speeds averaging 150 kph. The PAGASA issued TWCS No. 3 warning to Northern Samar, Samar, Eastern Samar, Leyte, Biliran and the Camotes Islands. Although there were no casualties, strong typhoon winds and heavy rains led to significant physical and economic damages. Winds sent three barges and a tugboat slamming into the shores of Barangay Punta, and downed lamp posts in Ormoc's center city, while residents waded through a flooded highway.

Typhoon Odette, 2021. In the afternoon of December 16, 2021, Super typhoon Odette Strong reached Ormoc City with gusty winds coming from north-northeast direction with occasional moderate to heavy rainfall. Similarly, there were no casualties, but the city was not spared of physical and economic damages; including fallen electrical post which resulted in power outages. Minor damaged to houses of light materials were also reported and some fallen trees and branches caused damages to structure of light materials and on houses and other buildings. Debris and fallen commercial billboards blocked vehicle and foot passage. Substantial damage to agricultural crops and vegetation were also observed. However, no major flooding in the area due to the typhoon was reported.

On the other hand, Ormoc City is also not exempt from human-induced disasters; in 2008, a total of 24 casualties and 21 were injured when the Unitop Department store was on fire and accounted for 3.5 million pesos in property damage recorded.

APPROACH TO ASSESSING ORMOC CITY'S DISASTER RISK

In determining the disaster risk profile for Ormoc City, this report utilizes key definitions and approach from the United Nations Office for Disaster Risk Reduction (UNDRR). According to the UNDRR, ***disaster risk*** is—

> "the potential loss of life, injury, or destroyed or damaged assets which could occur to a system, society or a community in a specific period of time, determined probabilistically as a function of hazard, exposure, vulnerability and capacity."

Assessing Ormoc City's disaster risk, will require an analysis of the four key factors mentioned above:

(a) **Hazard**- which is the occurrence of meteorological, geological, health events or human activity that may cause loss of life, injury or other health impacts, property damage, social and economic disruption or environmental degradation." Hazards may be classified as a single event or sequential or combined events, characterized by its location, intensity or magnitude, frequency, and probability;

(b) **Exposure**- which is comprised of the people, infrastructure, housing, production capacities and other tangible human assets located in hazard-prone areas. According to the UNDRR "measures of exposure can include the number of people or types of assets in an area. These can be combined with the specific vulnerability and capacity of the exposed elements to any particular hazard to estimate the quantitative risks associated with that hazard in the area of interest;"

(c) **Vulnerability**- which is defined as the conditions that increase the city's susceptibility to hazards. This is further classified as: physical, economic, social and environmental vulnerabilities. Other dimensions of vulnerability include cultural and institutional factors; and

(d) **Capacity** – which is the combination of all the strengths, attributes and resources available to Ormoc City and Ormocanons to manage and reduce disaster risks and strengthen resilience.

Relationship between hazards, exposure vulnerability. To many people, natural hazards, such as typhoons and earthquakes are synonymous to disasters. While it is very closely associated with the most impactful disasters, hazards alone are not what makes a disaster event. It must be noted that natural hazards such as typhoons, can occur in the middle of the ocean. Earthquakes can happen in the middle of uninhabited forests. Without the presence of humans, man-made assets or built-up areas, roads and infrastructure, and agricultural production areas, these hazards are nothing but natural planetary activities that respond to trigger conditions. For example, the warming of oceans precipitates more intense super typhoons. Therefore, what makes a disaster is natural hazard occurring in locations with human habitation, activities and physical assets. See Figure 5 for UNDRR's illustration on this concept.

DISASTER RISK = HAZARD x EXPOSURE x VULNERABILITY

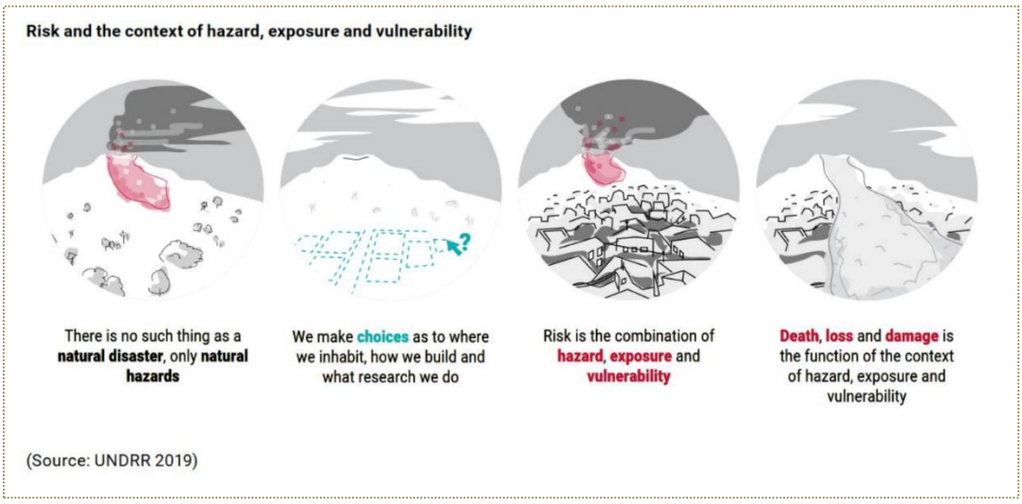

Figure 5. Relationship between Hazards, Exposure and Vulnerability

The following discussions will center on hazards that continue to occur in Ormoc City, the elements and population exposed to such hazards, peculiar vulnerabilities of the city and the city's capacity and readiness in addressing disaster risks.

HAZARDS ANALYSIS

Sequential effects of hazards. It is important to understand that hazards are interrelated and have sequential effects on communities in affected locations. Hazards are classified as Primary Hazards, which are hazards that occur in Ormoc City, as a result of Ormoc City's geographical location. Secondary Hazards are those that occur in Ormoc City as a result of the occurrence of Primary Hazards.

The following table presents the primary and secondary hazards that occur in Ormoc City.

Table 4. Primary and secondary hazards that occur in Ormoc City

Primary Hazard	Secondary Hazard (1)	Secondary Hazard (2)	Secondary Hazard (3)	Secondary Hazard (4)
A. Tropical Cyclone: Super typhoons, storms	Flooding	Rain-induced landslides	Storm surge	
B. Torrential Rains	Flooding	Rain-induced landslides		
C. Earthquakes	Ground rupture and shaking	Earthquake-induced landslides	Liquefaction	Tsunami

As shown in Table 4, there are three (3) primary hazards, all of which occur and are expected to continue to occur in Ormoc City by virtue of its location. These give way to secondary hazards, such as flooding, rain-induced landslide, storm surge, ground rupture, earthquake-induced landslides, liquefaction and tsunami. These hazards are defined below.

A. Tropical cyclone: typhoon, super typhoon, storms.

According to PAGASA, a tropical cyclone is defined as a non-frontal, synoptic-scale cyclone developing over tropical and sub-tropical waters at any level and having a definitely organized circulation. In other parts of the world, these are referred to as hurricanes, typhoons or simply tropical cyclones depending on the region. In the North Atlantic, Eastern North Pacific and South

Pacific Ocean, they are called "hurricanes." In the bay of Bengal, Arabian Sea and Western South Indian Ocean, the name is "cyclonic." In the eastern part of the Southern Indian Ocean, it is "willy-willy," and in the Western North Pacific Ocean, they are called "typhoons."

Tropical cyclones are warm-core low pressure systems associated with a spiral inflow of mass at the bottom level and spiral outflow at the top level. They always form over oceans where sea surface temperature, also air temperatures are greater than 26°C. The air accumulates large amounts of sensible and latent heat as it spirals towards the center. It receives this heat from the sea and the exchange can occur rapidly, because of the large amount of spray thrown into the air by the wind. The energy of the tropical cyclone is thus derived from the massive liberation of the latent heat of condensation.

Tropical cyclones can only form over oceans of the world except in the South Atlantic Ocean and the south eastern Pacific where a tropical cyclone could never be formed due to the cooler sea surface temperature and higher vertical wind shears. They develop at latitudes usually greater than 5° from the equator. They reach their greatest intensity while located over warm tropical water. As soon as they move inland, they begin to weaken, but often not before they have caused great destruction.

The Philippines is prone to tropical cyclones due to its geographical location which generally produce heavy rains and flooding of large areas and also strong winds which result in heavy casualties to human life and destructions to crops and properties. Thus, it is of utmost importance to have sufficient knowledge on such maritime phenomena for beneficial purposes.

Tropical cyclone constitutes one of the most destructive natural disasters that affects many countries around the globe and exacts tremendous annual losses in lives and property. Its impact is greatest over the coastal areas, which bear the brunt of the strong surface winds, squalls, induced tornadoes, and flooding from heavy rains, rather than strong winds, that cause the greatest loss in lives and destruction to property in coastal areas. The following are the effects of tropical cyclones: (a) strong winds, (b) tornadoes, (c) rainfall and flooding, and (d) storm surge.

Secondary hazards that arise from tropical cyclones include:

FLOODING
Flood is an abnormal progressive risk in the water level of a stream that may result in the overflowing by the water of the normal confines of the stream with the subsequent inundation of areas which are not normally submerged.

RAINFALL
Rainfall associated with tropical cyclones is both beneficial and harmful. Although the rains contribute to the water needs of the areas traversed by the cyclones, the rains are harmful when the amount is so large as to cause flooding.

STORM SURGE
A storm surge is an abnormal rise of water due to a tropical cyclone and it is an oceanic event responding to meteorological driving forces. Potentially disastrous surges occur along coasts with low-lying terrain that allows inland inundation, or across inland water bodies such as bays, estuaries, lakes and rivers. For riverine situations, the surge is sea water moving up the river. A fresh water flooding moving down a river due to rain generally occurs days after a storm event and is not considered a storm surge. For a typical storm, the surge affects about 160 km of coastline for a period of several hours. It is also known as “daluyong ng bagyo.”

B. Landslide

According to Phivolcs, a landslide is the mass movement of rock, soil, and debris down a slope due to gravity. It occurs when the driving force is greater than the resisting force. It is a natural

process that occurs in steep slopes. The movement may range from very slow to rapid. It can affect areas both near and far from the source.

PHIVOLCS illustrates four modes of landslide movements: Fall, topple, slide, spread, or flow.

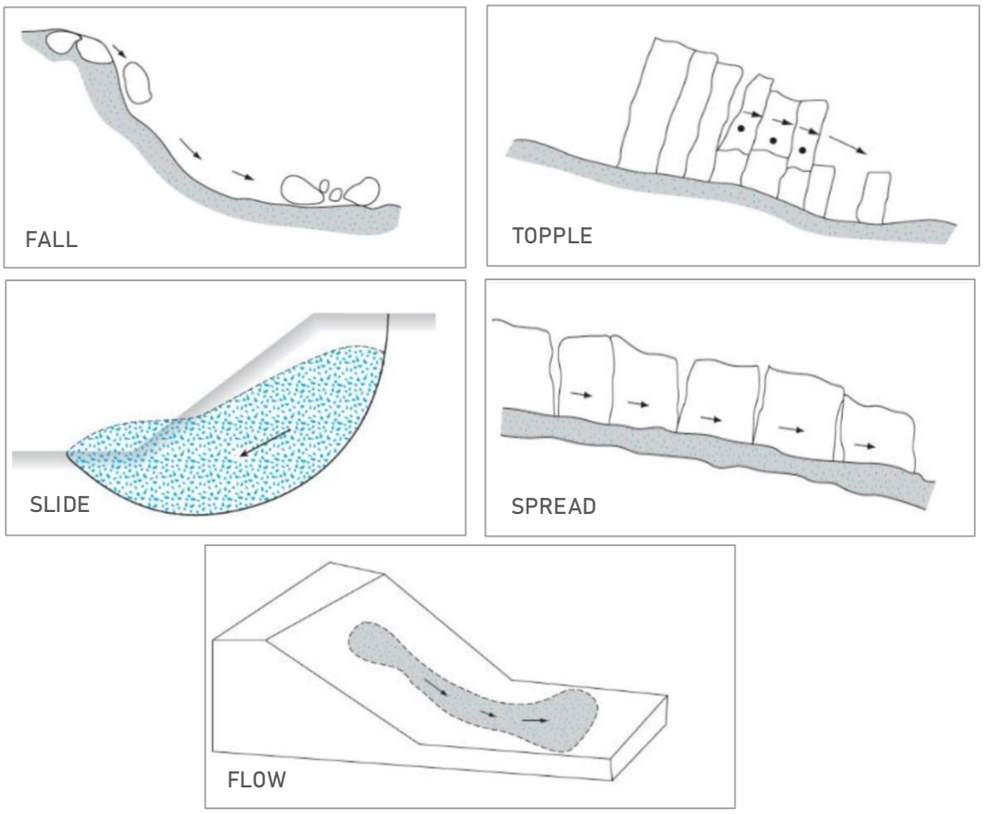

Figure 6. Landslide Movements (Fall, Topple, Slide, Spread, Flow)

Landslide triggers include intense rainfall, weathering of rocks, ground vibrations created during earthquakes, volcanic activity, and other natural and man-made triggers. Landslide materials may include: soil, debris, rock, garbage and man-made structures.

In this LDRRMP, landslides are classified as:

a. **Rain-induced landslide**- that which results from heavy rains and typhoons.
b. **Earthquake-induced landslide**- that which results from movements due to earthquakes.

C. Earthquake.

An **earthquake** is a weak to violent shaking of the ground produced by the sudden movement of rock materials below the earth's surface. The earthquakes originate in tectonic plate boundary. The focus is point inside the earth where the earthquake started, sometimes called the **hypocenter**, and the point on the surface of the earth directly above the focus is called the **epicenter**.

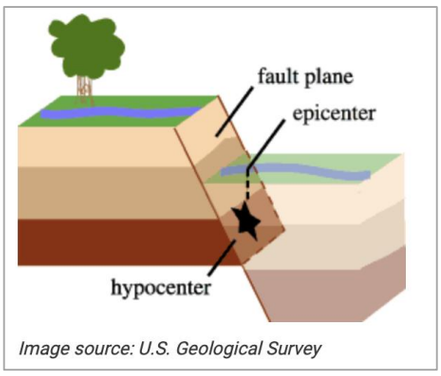

Figure 7. Schematic of soil movement due to earthquake

There are two ways by which we can measure the strength of an earthquake: magnitude and intensity. **Magnitude** is proportional to the energy released by an earthquake at the focus. It is calculated from earthquakes recorded by an instrument called **seismograph**. It is represented by Arabic Numbers (e.g. 4.8, 9.0). Intensity on the other hand, is the strength of an earthquake as perceived and felt by people in a certain locality. It is a numerical rating based on the relative effects to people, objects, environment, and structures in the surrounding. The **intensity** is generally higher near the epicenter. It is represented by Roman Numerals (e.g. II, IV, IX).

In the Philippines, the intensity of an earthquake is determined using the PHIVOLCS Earthquake Intensity Scale (PEIS). There are two types of earthquakes: tectonic and volcanic earthquakes. **Tectonic earthquakes** are produced by sudden movement along faults and plate boundaries. Earthquakes induced by rising lava or magma beneath active volcanoes is called **volcanic earthquakes**.

Secondary hazards arising from earthquakes are:

GROUND RUPTURE AND SHAKING
Ground rupture is the deformation on the ground that marks, the intersection of the fault with the earth's surface. Among the outcomes are fissuring, displacement of the ground due to movement of the fault.

Ground shaking is the disruptive up, down and sideways vibration of the ground during an earthquake. The effects of ground shaking are damage or collapse of structure and may consequently cause hazards such as liquefaction and landslide.

Figure 8. Ground Rupture

TSUNAMI
A tsunami is a series of sea waves commonly generated by under-the-sea earthquakes and whose heights could be greater than five (5) meters. It is erroneously called tidal waves and sometimes mistakenly associated with storm surges. Tsunamis can occur when the earthquake is shallow-seated and strong enough to displace parts of the seabed and disturb the mass of water over it.

LIQUEFACTION
Soil liquefaction occurs when soil is transformed from a solid to a liquid state as a result of increased pore pressure and reduced effective stress. It is typically caused by rapid loading of the soil during earthquake shaking. During this phenomenon, sediments, especially near bodies of water, behave like liquid similar to quicksand.

Effects of climate change on primary hazards. The following are the climate change projections from the Climate Change Commission's website. Climate change is one of the most fundamental challenges ever

to confront humanity. If there is no drastic action reduce further emissions of greenhouse gases, the effects on our planet such as extreme weather and increasing average global temperature is expected to escalate.

The Philippines, one of the countries at greatest risk to climate-related hazards, is projected to have the following scenarios in the coming years:

1. INCREASE TEMPERATURES

   The average temperature in all areas in the Philippines is expected to continue to rise by as much as 0.9°C to 1.9°C (under RCP 4.5) and 1.2°C to 2.3°C (under RCP8.5) by mid-21st century.

2. WETTER WET SEASON, DRIER DRY SEASON

   Increasing trends in annual and seasonal rainfall associated with extreme rainfall events were observed in many parts of the country.

   - Areas in the **Eastern portion of Visayas** and Mindanao will see increased trend in rainfall during the northeast monsoon season (December, January, February).

3. FREQUENCY AND INTENSITY OF EXTREME WEATHER EVENTS

   The intensity of typhoons and tropical storms are projected to increase. This means that cyclone will be expected to come with stronger winds. The frequency of strong tropical cyclones is more likely than not.

4. SEA LEVEL RISE

   The sea level has risen by 5.7- 7.0 millimeters per year over certain parts of the Philippines from 1993-2015, which is approximately double the highest global average rate of 2.8-3.6 millimeters per year. Projections reveal that the sea level in the country will be continue to be slightly larger than the global average. The increase is expected to be by approximately 20cm by the end of the 21st century (under RCP8.5 scenario).

These projections will result to increased frequency and severity of storm surge, floods, landslides, and droughts, among others. These exacerbate risks to agriculture, energy, water, infrastructure, human health, and coastal ecosystems.

EXPOSURE AND VULNERABILITY ANALYSIS

This is the first time that Ormoc LGU's LDRRMP has utilized the GeoRisk PH risk assessment platform, made available by the Philippine Institute of Volcanology and Seismology (PHIVOLCS). For this project, Ormoc LGU partnered with PHIVOLCS through a memorandum agreement.

GeoRisk PH. The GeoRisk platform utilized hazard maps from the Mines and Geosciences Bureau (MGB) of DOST and allowed for the overlay of such hazard maps with assets of Ormoc City, as follows:

- Population
- Built-up areas
- Critical facilities
- Road infrastructure
- Production areas
- Environmental areas

This project is a landmark effort in disaster risk assessment because it not only identified assets at risk but also made possible the quantification of damage costs even before any hazards actually occur.

Hazard analyzed. This detailed risk assessment was made possible with the cooperation of PHIVOLCS and for ORMOC LGU: CDRRMO, City Planning and Development Office (CPDO), City Engineering Office (CEO), City Agricultural Office (CAO), City Tourism Office (CTO), and the City Environmental and Natural Resources Office (CENRO).

The full results of this exposure analysis are presented in Annex A, Form 1-A. This comprehensive table shows the per barangay results of the types of assets and their values are affected by each of the following secondary hazard:

a) Flooding
b) Rain-induced Landslides
c) Storm Surge
d) Earthquake-induced Landslides
e) Liquefaction
f) Tsunami

One of the special features of GeoRisk PH is the inclusion of graduated hazard risk on most of the hazards analyzed, as follows:

Flooding– Low, Moderate, High, Very High
Rain-induced Landslide- Debris Flow, Low, Moderate, High
Storm Surge- Low, Moderate, High
Earthquake-induced Landslide- Debris Flow, Low, Moderate, High
Liquefaction- Low, Moderate, High
Tsunami- N/A

The detailed classification of the level of hazard risk is quite important because it allows this LDRRMP to direct DRRM plans, program and activities (PPAs) in areas where the risk levels and the cost the damages are most significant.

Analysis of results. The raw results of overlaying all the assets maps and hazard maps are presented in Form 1-A, as per NDRRMC's LDRRMP Formulation Guidebook, in Annex A.

These results have been analyzed with the following goals in mind:
How do we identify areas that must be prioritized in terms of DRRM investment?

The analytical process is layered, beginning with the larger picture to the detailed picture. The following are analyses and conclusions based on said results:

A. Biggest hazard threat is FLOOD. In terms of total potential damages due to exposure of assets to hazards, the hazard that poses the biggest threat to Ormoc City is **FLOODING**. The cost of all damages, unqualified as to the intensity of flooding, is P222.4 billion. This is followed by **RAIN-INDUCED LANDSLIDES**, with potential damages of P205.5 billion. The next biggest hazard threat is **LIQUEFACTION** with potential damages at 189.3 billion. See Figure 11.

B. The most expensive assets exposed to hazards are the BUILT-UP AREAS. Figure 13 illustrates how the largest proportion of potential damages is consist of built-up areas, for all hazards.

C. The probability of occurrence of the secondary hazards are dependent on the occurrence of primary hazards: TROPICAL CYCLONE AND EARTHQUAKE. Although the results from GeoRisk PH provides very comprehensive and detailed data on a per barangay, per asset, per hazard basis, it must be noted that these hazards are secondary hazards. This means that FLOOD, RAIN-INDUCED LANDSLIDES, AND LIQUEFACTION, all need a primary hazard to trigger these events. This relationship was identified earlier in this chapter, identifying **Tropical Cyclones and Heavy/Torrential Rains** as the trigger hazard for FLOOD and RAIN-INDUCED LANDSLIDE. **Earthquake** is the primary hazard that triggers LIQUEFACTION.

This means that the probability of occurrence for the top three (3) most damaging secondary hazards is a function of their primary hazard.

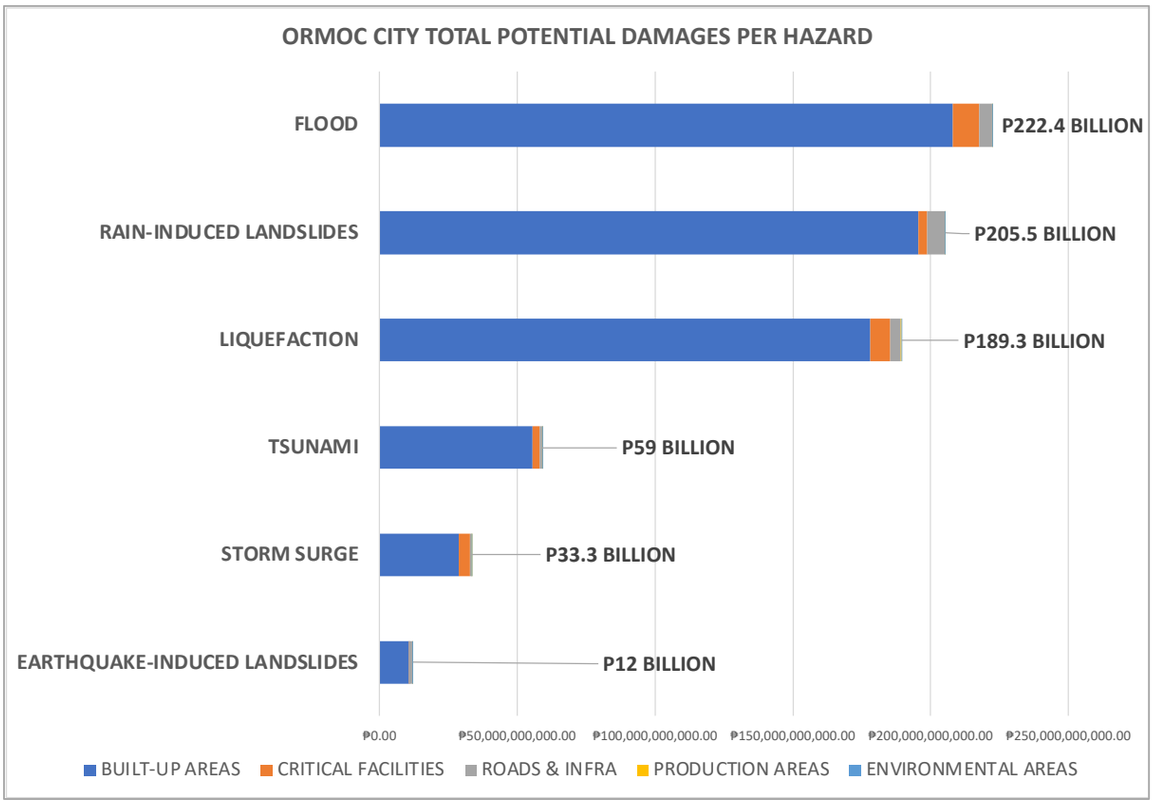

Figure 9. Total Potential Damages per Hazard

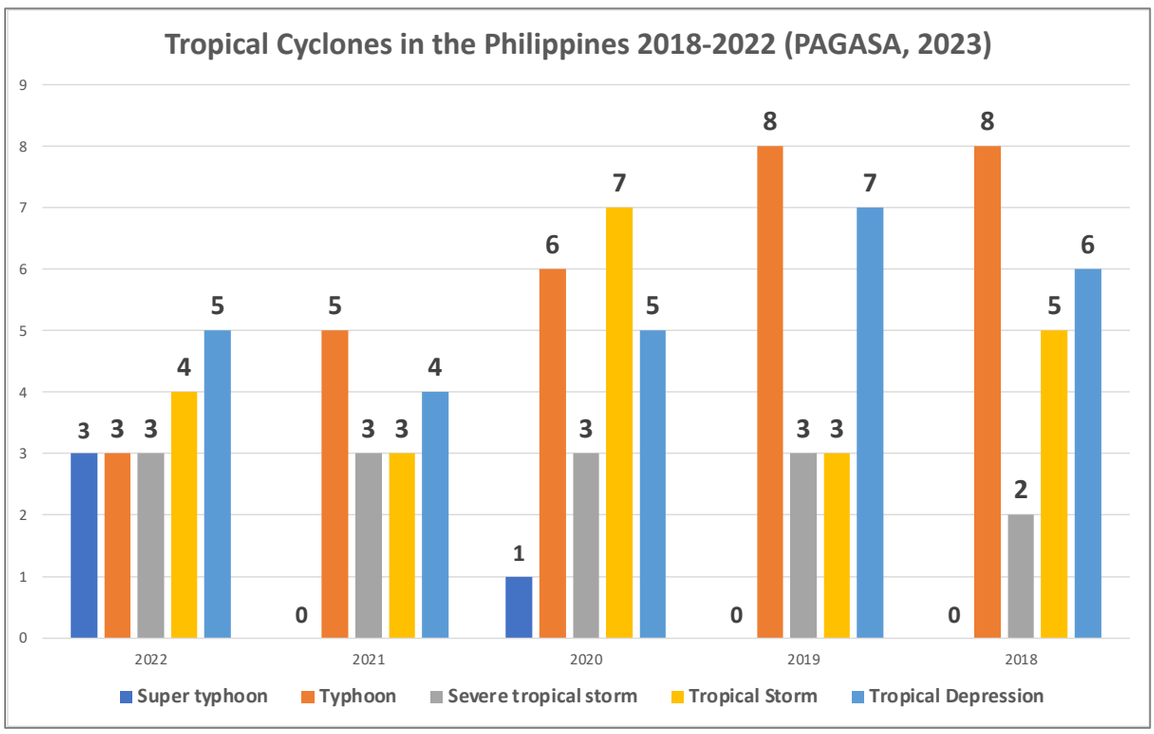

Figure 10. Tropical Cyclones in the Philippines 2018-2022 (PAGASA, 2023)

Occurrence of Tropical Cyclones. Historically, the last five (5) years in the Philippines has seen an average of 19 TROPICAL CYCLONES (TC) per year, as reflected in Figure 14. However, not all TCs hit the Eastern Visayas region. Below is the count of TCs hitting the Eastern Visayas Region, and therefore, affecting Ormoc City from 2018-2022.

Table 5. Tropical Cyclones to Hit Eastern Visayas Region (2018-2022) (PAGASA, 2023)

Type of Tropical Cyclone	2022	2021	2020	2019	2018
Super Typhoon			ROLLY		
Typhoon		JOLINA, ODETTE	AMBO, QUINTA	TISOY, URSULA	
Severe Tropical Storm					
Tropical Storm	AGATON	DANTE			AGATON, BASYANG
Tropical Depression		LANNIE	OFEL	AMANG	SAMUEL, USMAN

Occurrence of Earthquakes in Leyte. Earthquake events are naturally less frequent versus tropical cyclones. Below is the historical data (prior to 2017) on destructive earthquake occurrence in Leyte from PHIVOLCS' Special Report of the 2017 Earthquake. The table below shows that the last occurrence in Leyte prior to 2017 was in 1994, that was in Anahawan and St. Bernard in Southern Leyte. The last earthquake in close vicinity to Ormoc City was in 1863, with its epicenter in Kananga, Leyte.

Table 6. Destructive Earthquake Events in Leyte prior to 2017 (PHIVOLCS, 2017)

Date (Magnitude)	Location & Description
05 July 1994 (M6.2)	Hinundayan, Hinunangan, San Juan, Anahawan and St. Bernard, Southern Leyte
07 June 1947 (M6.9)	Epicenter in Carigara, Leyte
07 February 1890 (M6.4)	PEIS VIII – Barugi; PEIS VII-V – Other Towns of Leyte Province
27 September 1863 (M6.1)	Epicenter in Kananga, Leyte PEIS VI – Ormoc, Jaro, and Leyte
2012, 2007, 1998, 1994, 1991 Magnitude range 4.3 to 5.5	Seismic swarms in Southern Leyte

D. The probability of occurrence of Tropical Cyclones further raises the severity of the damaging effects of FLOOD and RAIN-INDUCED LANDSLIDES on Ormoc City. With this historical data, it is safe to conclude that the occurrence of Tropical Cyclones is more threatening as annually, there is at least one TC to occur in Ormoc City.

E. There are other destructive effects of TROPICAL CYCLONES AND EARTHQUAKES that are not included or reflected in the GeoRisk PH hazard assessments due to lack of availability on the platform. These destructive effects are:

   Tropical Cyclone:
   - Detachment and loss of roofs,
   - Collapse of building parts,
   - Collapse of trees and power lines, and
   - Collapse of communication towers, to name some.

Effects of local economy. Such destruction implies a compounded effect on the local economy. For example, fall trees result in impassability of roads, and therefore isolating some areas especially during critical periods of rescue.

a) Fallen power lines and communication towers cause failures in power and communication which result in the following:
   - Power outage result in business closures
   - Business closures impairs the availability of basic goods: food, medicines, drinking water and fuel
   - Lack of internet paralyzes banking transactions
   - Extended business closures result in loss of local jobs

b) Home destruction due to roof detachment and collapsed structures result in financial distress on top of physical loss of homes, and displacement of families.

These effects may have far greater multiplier effects than what can be possibly quantified and forecasted at this time. Nevertheless, these must be taken into account when planning DRRM PPAs.

Exposure Analysis per Hazard

Flood Risk Analysis, One of the advantages of using GeoRisk PH is the ability to narrow down the possible damages due to secondary hazards per barangay and per asset. These are the conclusions from the analysis.

1. With limited DRMM funding, PPAs must be focused on critical barangays. From the GeoRisk PH results, there are 46 barangays identified as **BARANGAYS WITH CRITICAL FLOOD RISK**. This was done by as follows:
   Total barangays with exposure to flood: 105
   Total barangays with high and very high exposure to flood: 90
   Total barangays with high a very high exposure to flood with exposed areas having 50% of its barangay population: 46
2. The BARANGAYS WITH CRITICAL FLOOD RISK are presented in the table below. The total affected population in these **46 barangays is 59,545 Ormocanons**.

3. Out of the 46 barangays, there are **19 barangays** that have potential damages of **over 1 billion pesos**. The total affected population in these 19 barangays is 52,011 Ormocanons, which accounts **for 87% of all the affected population** of the 46 Critical Barangays.

4.
5.

DRRM CAPACITY OF ORMOC LGU

Building and sustaining the foundation of Disaster Risk Reduction and Management

The City of Ormoc's DRRM Plan builds on the foundation laid by two (2) previous LDRRM Plans (2016-2020 and 2021-2022), which set fundamental baselines for disaster management in the city.

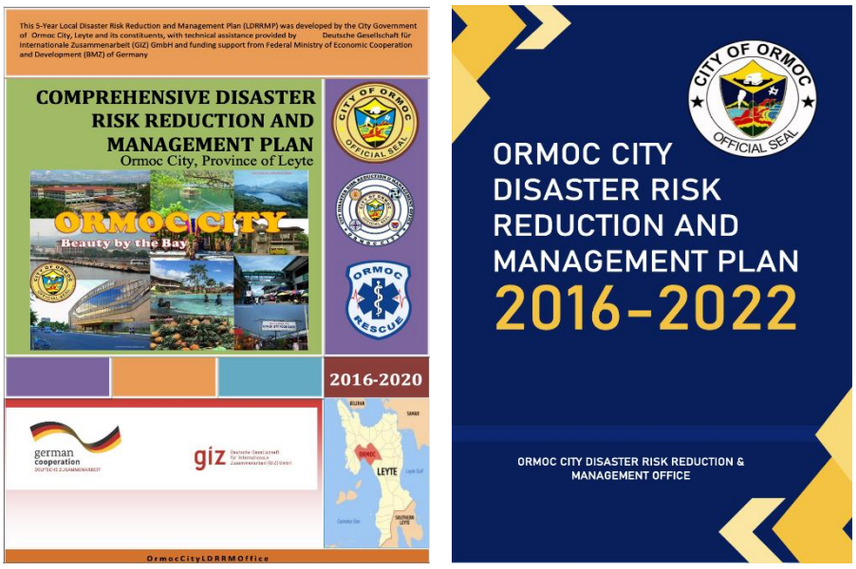

Figure 11. (Left to Right) Coverpage of Ormoc City DRRM Plan 2016-2020 and Coverpage of Ormoc City DRRM Plan 2016-2022

Ormoc City's approved DRRM Plan for 2016-2020 was aligned with the National DRRM Plan through the establishment of three (3) core programs, which were programmatic in nature, namely:

1. **Disaster Prevention Program** - Focuses on physical infrastructure support program to repair health, birthing centers (3 in 1 facilities). Retrofitting of city hall, water system rehabilitation, enhancement of evacuation centers and disaster operation centers.

2. **Disaster Mitigation and Climate Change Adaptation Program**– Gives importance to the agriculture resiliency, health emergency management, environmental protection and solid waste management support program of Ormoc City.

3. **Disaster Preparedness and Response Program** – Focuses on two aspects: (1) upgrading the internal system and general operation management; and (2) the organizational development of LDRRMC and LDRRMO.

The previous plan serves as an ideal starting point to segue the 2023-33 LDRMM plan into better integrated and more cohesive programs.

The emergence of the COVID-19 pandemic beginning 2020 greatly influenced disaster management and response, not just in Ormoc City, but throughout the world. Due to its urgency, especially in 2020, the renewal of the LDRRM plan was scaled down to a two-year update covering the years 2020-2022. It was also necessary to skew this update to meet the emerging DRRM concerns, particularly in the health sector. This resulted in COVID-19 sensitive DRRM plan. While the plan adopted the previous plan's strategies, this plan expanded its vision for the city for a safer, adaptive, and disaster-resilient Ormoc City towards sustainable development.

With the two (2) plans at helm, what is next for Ormoc City? Have we envisioned a safer, adaptive, and disaster-resilient Ormoc City towards sustainable development?

Visualizing these efforts have become vague as the previous plans did not show how to properly qualify or quantify the City's DRRM efforts. But generally, The City of Ormoc has significantly improved in DRRM. This is evident that the city has been conferred with the Gawak KASALAG Seal of Excellence in DRRM and

the Seal of Good Local Governance, as one area there is Disaster Preparedness.

To clearly see the picture of the city's efforts, let us FIND on what we have done and what is missing. Then as your INPUT, we will know where to go and how to get there. And lastly, the City needs to OWN, who is responsible, everyone should be on board to make this happen.

EXISTING DRRM PLANS AND EFFORTS

Sendai Framework for DRR || Sustainable Development Goals || Paris Agreement

The Sendai Framework for DRR (2015-2030) aims to achieve a substantial reduction of disaster risk and losses in lives, livelihoods, and health and the economic, physical, social, cultural, and environmental assets of persons, businesses, communities, and countries.

With this framework in view, Ormoc City has developed its Comprehensive Disaster Risk Reduction and Management Plan for 2016-2022 aligning its strategies, plans, programs, and activities to the four (4) priorities for action to prevent new and reduce existing disaster risk to achieve focusing in the four (4) out of its seven (7) major targets which are: (i) substantially reduce global disaster mortality; (ii) substantially reduce the number of affected people; (iii) Reduce direct disaster economic loss; (iv) substantially reduce disaster damage to critical infrastructure and disruption of basic services.

Ormoc City was able to integrate these priorities through the four (4) thematic areas under the National Disaster Risk Reduction and Management Plan by identifying focus areas in disaster risk reduction and management.

Ormoc's Existing CDRRM Activities

Table 9. Ormoc's Existing CDRRM Activities

Sendai Framework 4 Priority Action	NDRRMC Thematic Areas	Ormoc City DRRM Focus Area
Understanding Disaster Risk	Prevention and Mitigation	Disaster and Climate Risk Information Disaster Prevention and Control
	Preparedness	IEC Plans and Programs Education Services
	Response and Early Recovery	Pre-developed disaster response plans, policies, and protocols
	Rehabilitation and Recovery	
Strengthening Disaster Risk Governance to Manage Disaster Risk	Prevention and Mitigation	Information Management and System Resilience in Livelihoods Resilience in Business Resilient Housing LDRRM Fund Utilization Risk Financing
	Preparedness	Strengthening Local DRRM Council Strengthening Local DRRM Office
	Response and Early Recovery	System on information gathering, reporting, and dissemination
	Rehabilitation and Recovery	
Investing in Disaster Reduction for Resilience	Prevention and Mitigation	DRRM-CCA Environmental policies, plans and budget Resilient Infrastructure System Early Warning System
	Preparedness	Local DRRM Operations Center / Emergency Operations Center Procurement and Maintenance of DRRM Equipage
	Response and Early Recovery	Public and Private Sector partnership for Humanitarian Response and Logistics
	Rehabilitation and Recovery	Housing Program
Enhancing Disaster Preparedness for	Prevention and Mitigation	Nature-based Solutions

Effective Response, and to "Build Back Better" in Recovery, and Reconstruction.	Preparedness	Simulation Exercises DRRM-CCA in Education Vertical and Horizontal Interoperability Early Preparedness and Preparedness to Response Capacity Building Stockpiling and Prepositioning Evacuation Management System
	Response and Early Recovery	Institutionalization of the Incident Command System Systematic Relief Operations Forecast-based Early Action Restoration of Critical Lifeline Systems Mental Health and Psychological Services Camp Coordination and Camp Management
	Rehabilitation and Recovery	Post Disaster Needs Assessment Recovery and Rehabilitation Program Temporary Employment Program Livelihood Program Agricultural Production Assistance Program Social Services Protection

Cross-cutting strategies through the Sustainable Development Goal were also integrated into the formulation Comprehensive DRRM Plan as these are also mainstreamed in the City's Comprehensive Development Plan. This enabled the City to have a geographic-based perspective on planning and investment that encompasses all barangays and strengthened its interface and dialogue to achieve participatory governance in DRRM. Also, this allowed the City to start building its data management system with specific matrices that enable it to assess its accomplishments and contribution to the SDG, especially on the dimension of environmental protection.

In the lens of Climate Change, Ormoc City in its alignment with the Paris Agreement embedded the essential strategies, plans, programs, and activities in the Local Climate Change Adaptation Plan that crosses the Disaster Risk Reduction and Management. Specifically flood control measures to drastically reduce the risk of affected areas to riverine flooding.

Making Cities Resilient

As part of Ormoc City's thrust in improving its local resilience, it has pledged by joining the Making City Resilient 2030. This is a unique cross-cutting initiative from the UNDRR for improving local resilience through advocacy, sharing knowledge and experiences, establishing mutually reinforcing city-to-city learning networks, injecting technical expertise, connecting multiple layers of government, and building partnerships.

The City signed a commitment to ensure that its direction towards resilience builds upon the foundation of the global goals. Through this commitment, the City is set to strive to become inclusive, safe, resilient, and sustainable by 2030 and commits to reducing disaster and climate risk and continue to improve sustainability by taking actions to enhance resilience. This is also aligned by contributing directly to the achievement of Sustainable Development Goals 11 which is "Make cities and human settlements inclusive, safe, resilient and sustainable", and other global frameworks including the Sendai Framework for Disaster Risk Reduction, the Paris Agreement, and the New Urban Agenda."

Figure 12. Certificate of Commitment to Disaster Risk Reduction and Resilience

In addition, the City is guided by the following Ten Essentials for Making Cities Resilient as these were developed to accelerate the implementation of the Sendai Framework for Disaster Risk Reduction (2015-2030) at the local level. This allows the City to navigate the essential elements in the local governance landscape by identifying strategic areas for intervention and identify key actions that integrate the City's overall disaster risk reduction and resilient planning process. And setting a clear long-term direction towards resilience building.

Resilient LGU Program (National Resilience Framework)

In an effort to persevere to become a resilient city, Ormoc City was chosen to be part of the Resilient LGU Program of the National Resilience Council. The program is designed to build capacity in evidence-informed risk governance. The program is guided by the Resilient Framework, a science and technology-bases, evidence-informed resilience approach promoting the importance of public-private partnerships in establishing resilience local government systems, which is enabled by the thematic areas: Prepare, Adopt, and Transform principle through a Resilience Scorecard.

Ormoc City has organized its Resilience Council to achieve the necessary indicators. Under the Prepare Thematic Area, the City is able and ready to mitigate or minimize loss of lives and assets, and for Adapt Thematic Area, is continuously striving in improving its existing systems to reduce risk and vulnerability to hazardous events. The City has yet to undergo Transformation in changing or scale-up existing systems to achieve resilience.

One of the key strategies is Strengthening Public-Private Partnership with the Energy Development Corporation that aligns the corporation's nature-based solutions to hazard mitigation with the disaster risk reduction policies that enhance environmental resilience and sustainable local economy of the city.

Key interventions of the Energy Development Corporation for Ormoc City

- Biodiversity Monitoring and Conservation Program (BCMP) in four barangays
- Conduct of capacity building for upland dwellers and deputation of Forest Protection Officers in five barangays
- Formation of a multi-sectoral Forest Protection Committee/Task Force in Ormoc City and Kananga, Leyte
- Investment in appropriate and responsive human, technical, and financial capacities and technology through IECs and trainings
- Establishment of coffee and cacao livelihood enterprise in Ormoc City
- Implementation of Barangay-based IECS on Priority Laws

- Implementation of forestry laws, rules, and regulations
- Rehabilitation program for degraded ecosystems

National Disaster Risk Reduction and Management Plan 2020-2030

In an effort to contribute to the national strategies and outcomes, Ormoc City has aligned the Comprehensive DRRM Plan 2016-2020 to the NDRRMP 2011-2028 the updated up to 2022 for COVID-19 Pandemic to initially align with the NDRRM Plan 2020-2030. Ormoc City recognizes that the NDRRMP 2020-2030 is the roadmap to help the country move towards its vision of resilience, as stated in the framework - "Safer, adaptive and disaster-resilient Filipino communities toward sustainable development" as emphasized in the updated NDRRM Framework.

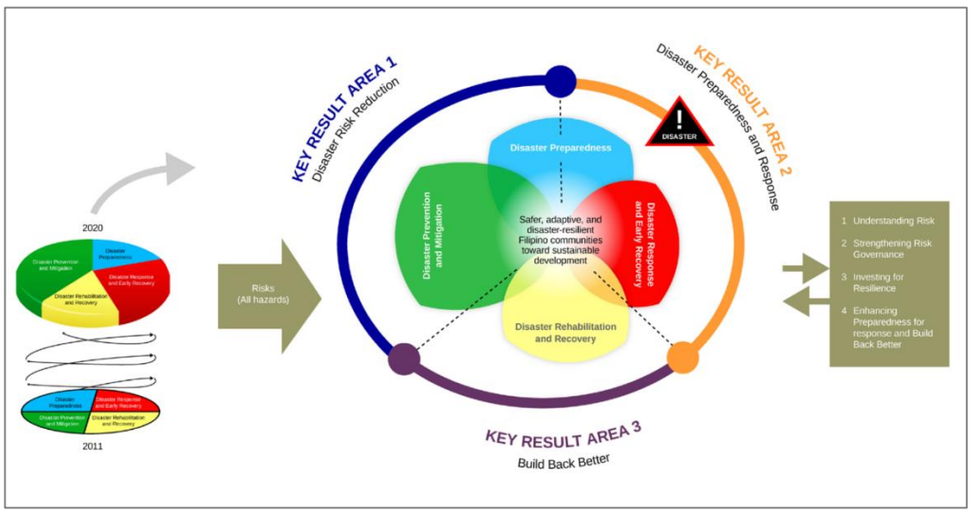

Figure 13. The National Disaster Risk Reduction and Management Framework 2020-2030

In summary, the updated framework has two primary features. The first feature shows the spiral transition, progress, and achievement toward realizing our resilience goal as depicted in the existing framework. The second feature depicts the transformation and recalibration of the framework that emphasizes several things: First, the emphasis on the centrality of risk and focus on an all-hazards approach; Second, the inclusion of risk governance; Third, by focusing on resilience strengthening, it underlines the importance of building adaptive, anticipatory, responsive, and transformative capacities of people and government; Fourth, coherence and mutual reinforcement of strategies among actors and across thematic pillars are emphasized to improve the system and avoid working in silos; and Fifth, the adoption of the four priorities for action of the SFDRR as strategies to achieve the overall goal of disaster risk reduction and resilience. (footnote NDRRMP).

To situate the efforts and contributions of the Ormoc City in the NDRRMP, strategies were set to facilitate the translation of the thematic pillars and outcomes are the local level.

It is evident that Ormoc City through its DRRM Plan, a total of 148 PPAs from the 2 plans have a direct contribution to the National DRRM Plan, and 67 PPAs have contributed that are cross-cutting concerns. It can be seen that the city has significantly invested under the Key Result Area 1: Disaster Risk Reduction on which Prevention and Mitigation, and Preparedness are situated. This is aligned with the National Framework. But more importantly, these investments resulted in a more proactive approach in DRRM resulting in lesser time of flooding, good disaster response and management systems (ICS), timely delivery of services and reduced number of casualties. It can be noted that several outputs under the City's DRRM Plan contributed to several outcomes as these outputs are linked with the City's developmental plans that are cross-cutting in nature.

The PPAs contributed to several outcomes as these outputs are linked with the City's developmental plans that are cross-cutting in nature. However, activities are targeted not based on the results of the risk assessment in the locality thus yielding to fragmented outputs that does not fully address the

developmental areas concerned and efforts of the City are spread throughout the outcomes and some of the activities are not sustainable, or in some cases, conducted only once.

But overall, Ormoc City is already on the right path. Some of us here might not have felt it but we must always go back to where we came from in order for us to realize that our efforts, whether big or small, eventually will contribute to the bigger picture.

Thus, below are the number of outputs under the Ormoc City DRRM Plan 2016-2020/2022 at aligns with the NDRRMP 2020-2030 through the outcomes:

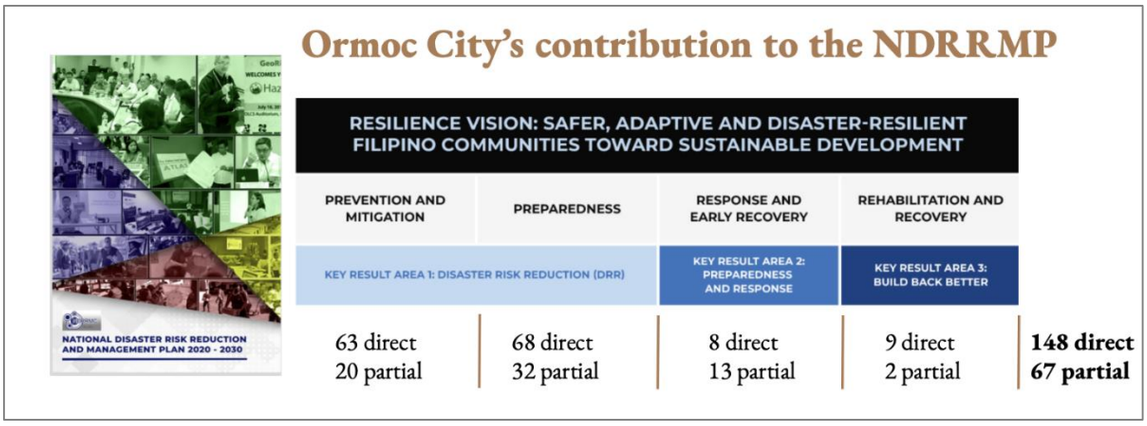

Figure 14. Ormoc City's Contribution to the National DRRM Plan

Ormoc City's Contribution to the NCRRMP

Table 10. Ormoc City's Contribution to the NCRRMP

Resilience Vision: Safer, Adaptive and Disaster-Resilient Filipino Communities Towards Sustainable Development							
Prevention and Mitigation		Preparedness		Response and Early Recovery		Rehabilitation and Recovery	
Key Result Area 1: Disaster Risk Reduction				Key Result Area 2: Preparedness and Response		Key Result Area 3: Build Back Better	
Outcome	No. of Outputs	Outcome	No. of Outputs	Outcome	No. of Outputs	Outcome	No. of Outputs
Outcome 1: Improved access, understanding and use of updated risk information and research	5(5)	**Outcome 9:** Enhanced risk awareness and risk-informed decisions and actions of governments and communities	3(5) / 5(8)	**Outcome 13:** Well-established disaster response operations with well-equipped workforce and volunteers	3(5) / 5(8)	**Outcome 18**: Clear policy directions for rehabilitation and recovery	4(1) / 5(1)
Outcome 2: Implemented risk-centered national, sub-national, and sectoral policies, plans, and budget	7(1) / 15(1)	**Outcome 10:** Increased institutional capacities of National and Local DRRM Councils and Offices	11(2) / 19(2)	**Outcome 14**: Appropriate early actions are provided to communities	3(5) / 5(8)	**Outcome 19**: Sustainable and socially-inclusive income sources for house- holds are made available and stability of economic activities is restored	4(1) / 5(1)

Outcome 3: Increased structural integrity of housing, building and critical infrastructur e	5(0) / 5(0)	**Outcome 11**: Strengthened partnership and coordination among all key actors and stakeholders	7(1) / 15(1)	**Outcome 15**: Accurate, reliable and timely information management	3(5) / 5(8)	**Outcome 20**: Agricultural production is restored or increased and support services for farmers, fisher folks, and laborers are made accessible	4(1) / 5(1)
Outcome 4: Institutional- ized timely, responsive, context-and culture- specif- ic early warning systems, reaching the last mile	3(5) / 5(8)	**Outcome 12**: Implemented comprehensiv e and mutu- ally- reinforcing national and local preparedness and response plans, policies, and system	3(5) / 5(8)	**Outcome 16**: Affected com- munities are provided with gender- responsive, and conflict- and culturally- sen- sitive basic necessities and services	3(5) / 5(8)	**Outcome 21**: Affected fam- ilies and individuals have access to: (a) affordable disaster-resilient housing that are located in safe zones where social services and public facilities are available; or (b) financing assistance to rebuild their houses in areas that are declared as safe zones.	4(1) / 5(1)
Outcome 5: Communities have access to effective, responsive and inclusive social protection, risk financing, and insurance mechanisms				**Outcome 17**: Implemented an integrated system for early recovery		**Outcome 22**: Affected individuals, families, and communities have access to responsive, appropriate and adequate education, health, and so- social protection services	4(1) / 5(1)
Outcome 6: Natural resources and eco- system integrity are im- proved and sustained	4(0) / 4(0)					**Outcome 23**: Disaster resilient standards in infrastructure are observed during rehabilitation and recovery	4(1) / 5(1)
Outcome 7: Disaster- resilient livelihoods and businesses							
Outcome 8: Families in high-risk areas resettled in well-planned communities	5(0) / 5(0)						

However, it can be observed that the efforts of the City are spread throughout the outcomes and some of the activities are not sustainable, or in some cases, conducted only once. And some outcomes are yet to be linked.

Also, it can be seen that activities are targeted not based on the results of the risk assessment in the locality thus yielding to fragmented outputs that does not fully address the developmental areas concerned.

Regional Development Plan

The Comprehensive Development Plan of Ormoc City is aligned with the Regional Development Plan of Eastern Visayas, specifically via its goal of enhancing Disaster Risk Reduction and Climate Change Adaptation and Mitigation (DRR-CCAM).

The city has contributed to the achievement of the regional goals under the DRR-CCAM specifically on the use of vulnerability risk assessment and multi-hazard mapping, mainstreaming of DRR-CCAM in local policies, plans and programs, environmental management, disaster-resilient infrastructure system, risk financing and insurance, strengthening of local DRRM Councils and Office, partnership and coordination among DRRM stakeholders, disaster response operations, DRR-CCAM elements mainstreamed into human settlements and the formulation of CLUP and Zoning Ordinance.

Regional Disaster Risk Reduction and Management Plan of Eastern Visayas

The Regional DRRM Plan and the City DRRM Plan of Ormoc are one in its goal to achieving a resilient, safer and secured locality. Efforts both in the city level and regional level are provided to the following DRRM Thematic Areas:

- Prevention and Mitigation: Mainstreaming of DRR-CCAM into local policies, plans and budgets, premium on environmental management, initiatives on green and gray infrastructure towards resiliency, managing emerging infectious diseases, strengthening community-based DRRM and better forecasting and early warning system.
- Preparedness: Increasing awareness on threats and hazards, improve capacity of DRRM institutions and strengthening partnerships with key DRRM Stakeholders.
- Response: enhancing capacities for search, rescue, retrieval and management of the dead and the missing to preserve life and meet the basic needs during and after a disaster.
- Rehabilitation and Recovery: improved system of conducting PDNA and DALA, gender-sensitive and inclusive human settlements, provision of support and employment to affected families and exploring options to disaster resilient public infrastructure and utilities.

Comprehensive Development Plan

The Comprehensive Development Plan (CDP) of Ormoc City, being a multi-sectoral development plan, embodies the city's aspiration and serves as a guide in materializing their vision of a better future. The CDP contains the programs and activities categorized to five sectors namely: Social, Economic, Environment, Infrastructure and Institutional. All five sectors reflects a DRRM perspective.

Under the Social Sector, DRRM initiatives are evident for programs such as: socialized housing for informal settlers or possible displaced families at the event of a disaster, provision of emergency subsidies, organizational needs for the CSWDO and for Disease Surveillance and Epidemic Management. For the Economic Sector, much attention has been provided in the importance of an established DRRM System collaborative with Tourism such as capacitating tourism practitioners on disaster management, first aid and rescue, as well as, providing an organized medical and rescue support to identified tourist sites.

The DRRM is also evident for agricultural initiatives such as introduction of a resilient crop map, buffer seed stocking and exploring options on the provision of climate-resilient seeds and crops. Under the Environment Sector, strengthening of the CDRRMO organization such as expanding manpower complement, provision of much needed disaster tools and equipment and the formulation and update of

DRR-related plans such as CLUP, FLUP, LCCAP and Contingency plans are included. Also provided is the need to strengthen community-based DRRM, engaging more stakeholders through intensive DRRM IECs and capacity building activities. For the Infrastructure sector, considering the persistent problems of flooding, construction of critical facilities are reflected in the CDP.

These proposed infrastructures are the needed warehouses, storage facilities, expanded water supply system, flood and river control protection, and fuel storage tanks. All these will be critical in the city's journey towards resilience and materializing the goal of building back immediately in the event of a disaster. Lastly, under the Institution sector, a premium on training of personnel and research and development program for DRRM is provided.

Comprehensive Land Use Plan

Carrying the lessons from the historical data of Ormoc City such as their experiences of Tropical Storm Thelma back in 1991 and Super Typhoon Yolanda back in 2013, Disaster Risk Reduction and Management (DRRM) efforts are evident in city's existing Comprehensive Land Use Plan (CLUP).

Containing a substantial portion of the plan dedicated for DRRM, the CLUP provides a clear picture of existing disaster risks, with appropriate possible solutions to address such identified issues and problems. The CLUP also provides indicative programs and activities following the thematic areas of the DRRM namely Prevention and Mitigation, Preparedness, Response and Recovery and Rehabilitation. Lastly, the CLUP made use of the Climate and Disaster Risk Assessment to provide a clear picture of the city's present hazards, vulnerability and disaster risks which would be significant as a basis in the identification of necessary interventions to address such.

Local Climate Change Adaptation Plan

The Local Climate Change Action Plan of Ormoc City shows comprehensive data on the city's climate projections and its impacts. Having these possible impacts identified coupled with the susceptibility of geological and hydro-meteorological hazards, the LCCAP provides an all-inclusive mitigation and adaptation initiatives to address the existing risks and vulnerability for hazard-specific barangays of the city.

This plan outlines adaptation and mitigation objectives and initiatives of the city from 2019 to 2030. This plan is implemented with the following tools – Climate and Disaster Risk Assessment of the Housing and Land Use Regulatory Board, Community-level GHG Inventory of the Climate Change Commission, based on Enhanced LGU Guidebook on the Formulation of Local Climate Change Action Plan (LCCAP) Book 3 of the Local Government Academy of Department of Interior and Local Government. Also supported by the United Nations Human Settlements Program through the Building Resiliency through Urban Plans and Designs (BCRUPD) Project and the Vertical Integration and Learning for Low-Emission Development (V-LED) Project.

Key Disaster Risk Reduction and Management project (LCCAP)

The main source of flooding in the production zones with human settlements is the Pagsangaan River. This affects the eastern portion of the city particularly along its bank, traversing from municipality boundary of Kananga down to Ormoc Bay. Flood expands up to the depressions in the barangays of Libertad, Tambulilid, and Sto. Nino towards the major urban network along its minor tributaries.

This river is responsible to the soil formation in this area that is highly fertile for planting. This also serves as the natural drainage of flood. Increase in the received amount of rainfall in Pagsangaan Watershed, even without a typhoon event, will ensure rise in the water. Typhoons enhance this flooding as the case of TY Urduja (Kai-tak) in December 2017 classified as tropical depression, maximum winds of 55 kph and gustiness 90kph, when it landfall in Samar Island. Its rainfall recorded in 15 December 2017 are as follows: 347.4 mm in Catarman, 331.2 mm in Catbalogan, 155 mm in Borongan, and 109.6 mm in Guiuan. This

enclosed the barangays of Liloan and San Juan with water, submerging farm lands, houses and roads. This also resulted in outflow on fish pens, resulting in dispersal of produce.

It is reported that concrete flood control along the banks upstream in Bayog and Rufina M. Tan is slowly degrading due to soil degradation. The same is observed in the same structures downstream in Liloan. Distance between opposite banks without flood control or vegetation is observed to widen.

Controlling the water outflow will dramatically decrease the risk of these areas to riverine flooding. However, an extensive study on the vegetation and soil characteristics of the river is highly needed to properly identify the approach on its bank stabilization, and water control. This must also consider the flow of surface runoff (coming from the rain, not a flood event), which drains on this river.

Disaster Risk Reduction and Management for Health Plan

Provided with the fact of existing hazards in Ormoc City, the continuity of basic health services before, during and after a disaster is of utmost importance. Ormoc City's Disaster Risk Reduction and Management in Health Plan would ensure that the goals of the Health sector on emergencies and disasters are met. This would guarantee uninterrupted health service delivery during emergencies and disasters, to avert preventable morbidities, mortalities and other health effects secondary to emergencies and disasters, and ensure that no outbreaks can occur.

The Disaster Risk Reduction and Management in the Health Plan of Ormoc City was carefully crafted according to the needs of the city. It is a collective effort done by the different sectors in the local governments in coordination with the communities to live ahead of disasters. Included in the plan are DRRM programs and activities specifically on health that offer a solution in a time where erratic weather conditions and natural disasters happen in escalating frequencies and intensities.

Ormoc City Shelter Plan

Considering the vulnerability of the city on multiple hazards, which provides that Flooding as the city's greatest threat, Ormoc City's shelter plan focuses mostly the informal settlers occupying danger zone areas such as those living along rivers, creeks, landslide – prone areas, no build – zone, affected by government infrastructure projects and affected by Typhoon Yolanda / Haiyan and the 6.5 magnitude earthquake victims. The number of these households accounts up to 15,787 out of which 2,272 are those families / households affected by the earthquake.

Ormoc City Shelter Plan 2017 – 2025 is an "enhanced tool" that incorporates several important planning parameters such as climate change vulnerabilities and disaster risk management. The Plan supports the overall development path and vision of the city as articulated in the city's Comprehensive Land Use Plan (CLUP) and Comprehensive Development Plan (CDP).

Gender and Development Plan

The Gender and Development (GAD) Plan of Ormoc City provides programs and activities addressing the current gender issues of the city. Mobilized by the GAD budget of at least 5% of the entire LGU budget, it covers the needs of not only women but more importantly the vulnerable sectors of the community such as the senior citizens, people with disability, children, youth, solo parents and other marginalized sectors.

Included in the city's GAD Plan is a significant budget for provision of food packs, hygiene kits and dignity kits for possible disaster victims and affected families during a disaster especially WEDCs or women in especially difficult circumstances. Also included in the plan is capacitating concerned personnel on gender-sensitive camp coordination and camp management and the provision of livelihood training and opportunities to identified beneficiaries which would be important in fast tracking the realization of building back better quickly after a disaster.

LDRRMP and Local Development Plans

With the lessons of Super Typhoon Yolanda and acceptance of the realities of existing hazards in Ormoc City such as flooding, earthquake and storm surge, the city government of Ormoc has put premium in the prioritization of implementing DRRM PPAs and importance of influencing DRRM perspective to local planning and budgeting. The Disaster Risk Reduction and Management is very evident and mainstreamed to the local plans of Ormoc City. The following are the local plans with DRRM initiatives:

Table 11. Local Development Sectoral Plans

Sectors	Local Development Sectoral Plans				
	CLUP	CDP	LCCAP	DRRM-H	Shelter plan
Social	0	6	2	9	4
Economic	3	14	5	0	1
Environmental	10	13	7	1	0
Infrastructure	12	16	26	1	0
Institution	11	2	3	18	11

DRRM is very evident and mainstreamed into the local development plans, this the impact of the CDRA. With the proper tools, Ormoc City was able to target PPAs into other sectoral plans. As show, the numbers represent the number of activities that are imbedded in the sectoral plans and with DRRM in mind, most of the investments are heavy on infrastructure, environmental and institution sectors.

Investment in Resilient Infrastructures

Sustainable and resilient infrastructure provides communities and the environment with their first line of defense against shocks and is critical for the support it provides in recovery efforts. Robust and resilient infrastructure are key drivers of local and national economic growth. However, evidence shows that existing infrastructure systems and the services they provide are increasingly being affected by natural and man-made hazards, and from the impacts of climate change. The current approach to managing and financing disaster risk reduction is lagging behind the rapid rate of creation and increasing complexity of disaster risk.[7]

Measuring the resilience of infrastructure is a challenge: There is no common understanding of what "resilient infrastructure" means, nor agreed benchmarks against which to gauge infrastructure resilience. Infrastructure is commonly understood as comprising assets and buildings; this needs to shift to include the vital services they provide.[8]

To realize this shift, Ormoc City is set to anchor its investments on the following six (6) interconnected Principles for Resilient Infrastructure developed by the UNDRR.

- Continuous learning
- Proactively protected
- Environmentally integrated
- Socially engaged
- Shared responsibility
- Adaptively transforming

[7] Building a Better Future: Investing in Resilient Infrastructure for All: https://globalplatform.undrr.org/conference-event/building-better-future-investing-resilient-infrastructure-all

[8] ibid

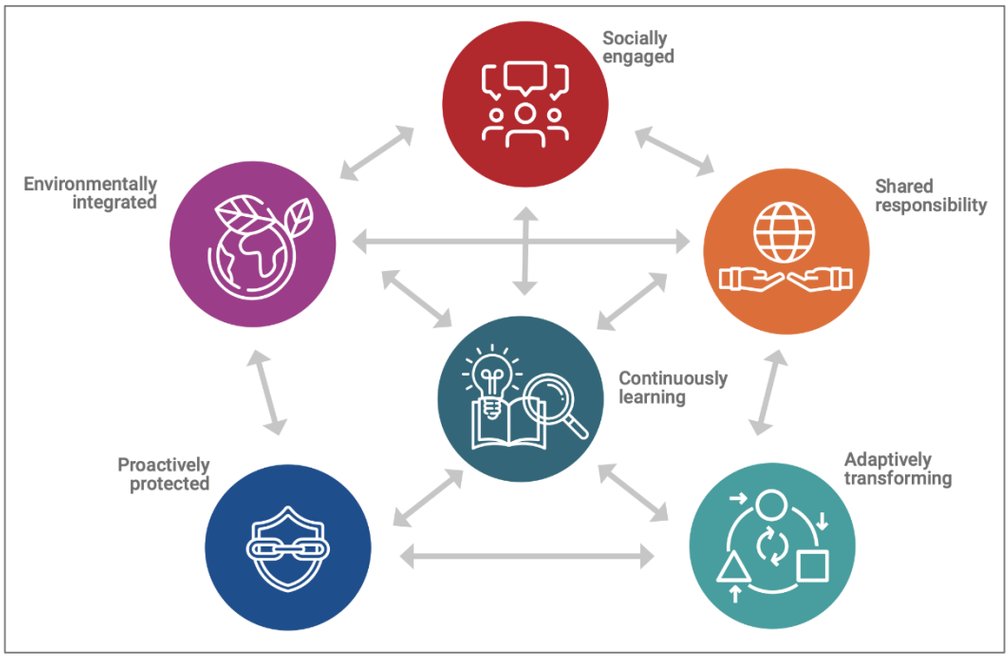

Figure 15. Six Principles for Resilient Infrastructure (UNDRR)

Each principle has a normative goal, similar to sustainable development goals [4] and the Sendai Framework for Disaster Risk Reduction [5], enabling continuous improvement of national infrastructure resilience. Together the six goals form a system of goals that achieve net resilience gain across all lifecycle stages of infrastructure (design, build, operate, de-commission) assuring the continuity of critical services through all phases of disruption management (preparation, absorption, recovery, and adaptation).

As to the current initiatives, Ormoc City has invested in several infrastructure projects, plans, and policies such as the integration of green designs into new infrastructure projects. To strengthen the foundation of Ormoc City to become resilient, the following projects were/are being implemented:

FUTURE PROJECTS

Flood Control and Urban Drainage Improvement in Ormoc City

As typhoons and other hydrometeorological events are intensified by changing weather patterns due to climate change, flood damage will continue to increase and will have a detrimental impact to the future development of the city. And many of the projects and programs of Ormoc are being stalled or slowed down by flooding and inundation.

The flooding and inundation in Ormoc City occur mainly due to restricted flow of rivers due to blocked natural channels; excessive surface runoff coming from areas of higher elevation; siltation and riverbank erosion along unprotected portions of creeks/rivers; overflow from creeks/rivers; breaching of the dike protecting the rivers; back flooding; and inadequate drainage systems.

The flood control and urban drainage system with a stepwise implementation program, in order to build a climate change adaptive and disaster-resilient Ormoc City and pursue its sustainable development goals.

Analysis of the result of the study will provide possible countermeasures to address the issue, such as but not limited to the following:

- Identification of problems in existing flood control and drainage systems
- Extraction of effective measures used in existing flood control and drainage facilities

- Identification of possible structural measures such as dike construction, channel improvement, retention pond, and additional installation to increase flow capacity
- Evaluation of possible non-structural measures to reduce runoff discharge such as retention, storage, and infiltration

The recommended interventions will be vital to the Ormoc City's Local DRRM Plan and other development and sectoral plans in guiding towards a more sustainable and resilient city.

While for the meantime, the City is investing in physical infrastructure and projects, it is set into the vision to slowly shift, in the long view, to Resilient Infrastructure. Implementation of the principles require building capacity and knowledge of various stakeholders engaged in all phases of infrastructure development, operation, and maintenance.

IMPACTS OF LGU EFFORTS ON DISASTER RISK REDUCTION

In the implementation of Disaster Risk Reduction and Management programs in the City of Ormoc, it is worth noting that at the start of implementation, there has been a consistent improvement and eventually evolved to what it is now. By adhering to the principles and policies set by the pertinent laws and policies, the City was able to build its thrust and aligning its efforts to the vision of the a safer, adoptive and resilient communities.

Table 12. Impacts of Ormoc City's Efforts on DRRM

Prevention and Mitigation	Preparedness	Response and Early Recovery	Recovery and Rehabilitation
• Disaster and Climate Risk Information • Information management (databasing) and statistics • Environmental policies, plans, and budget • Resilient Infrastructure Systems (policy/structure) • Early Warning Systems • Nature-based solutions • Resilience in livelihoods, businesses, and housing (policy/structure) • Risk Financing	• Established Local DRRM Council and Office with Operations Center • IEC Campaigns • Simulation Exercises • Mainstreaming vertical and horizontal interoperability • Policy and Plans (Preparedness and Response Strategies) • Continuous capacity building (training and equipage, stockpiling/ prepositioning) • Evacuation Centers	• Utilization of Incident Command System • Information management system (operations) • Systems and protocols for disaster relief response • PPP for humanitarian response and logistics • Forecast-based Early Actions • Restoration of Critical Lifelines • Generation of damage and needs assessment report • MHPSS< CCCM. And Disease Prevention and Control	• Post Disaster Needs Assessment *Recovery and Rehabilitation Programs* • Temporary Employment Program • Livelihood Program • Agricultural production assistance program • Social Protection Services • Housing Program

In general, Ormoc City's effort on DRRM have paved the way for its citizens to be resilient and disaster-ready. Through the concerted efforts from the City and community, in the purview of disaster prevention and mitigation, it has built on the database on DRRM, evolved its policies and structures and started investing in innovation. Under Disaster Preparedness, capacities of the LDRRM Council was strengthened. It has established its own LDRRM Office and Operations Center/Emergency Operations Center. It has also established Response Management Systems for Disaster Response and Early Recovery, and last time, it has implemented Recovery and Rehabilitation Programs for Disaster Recovery and Rehabilitation.

List all ongoing PPAs and timeline of completions (highlight multi-year programs especially infra – connect with Step 1.5) – this will guide us in revisiting the PPAs – inject LCE's guidance

MANAGING RESIDUAL RISK

Potential and evolving residual risks are generally taken into consideration in the development and implementation of disaster- and climate-related programs and projects of Ormoc City. This is in recognition that even after DRRM-CCA measures are applied, remaining risks may occur that may be due to: a) poor technical expertise or capacity; b) unclear information dissemination; and/or c) poor management of programs and projects. These must be addressed by continually improving mitigation controls; and, dedication to the regular monitoring of programs and projects.

General strategies to consider are risk avoidance (technology assessment and adoption), risk reduction (strict maintenance), risk transfer (insurance), and even risk acceptance. The appropriate strategy depends on the acceptable level of risk identified after looking at inherent risk and impact of risk controls that can be done on the per project/program/activity basis. Safeguards include program enhancements and process improvements that are facilitated and shall be determined in the term-based review and updating of the Ormoc City LDRRMP. Other embedded safeguards include: a) phasing of projects (especially infrastructure) to ensure that residual risk are considered in the pre, during, and post construction phases; b) social preparation to address public concerns and issues; and, c) technology transfers to ensure sustainability.

ANTICIPATING THE FUTURE IMPACTS OF DISASTER RISK TOWARDS RESILIENCE

In anticipating the future impacts of disasters in Ormoc City, its thrust is catalyzed by capitalizing on Innovation. Linking science and technology in policy making and programming, transforming the results of risk assessments into innovative PPAs that is cost effective, save lives, reduce losses, and ensure effective recovery and rehabilitation.

Innovation through Digital Technologies/Transformation. Advancement on sustainable development. Reducing barriers to access to science and technology, for developing science- and evidence-based policy making.

VULNERABILITIES AND CAPACITIES

SWOC analysis is a strategic planning tool used to evaluate the Strengths, Weaknesses, Opportunities, and Challenges of the City of Ormoc relative to its Disaster Risk Reduction and Management. This is important to gauge the city's readiness to respond to a disaster and identify potential gaps and areas of improvement.

The SWOC helps in identifying strengths of Ormoc in disaster management which would leverage them to maximize their response to a disaster. This include having trained personnel, well-equipped facilities, existing equipage and effective communication systems. It also identifies weaknesses in disaster management, it can help develop plans to address them before a disaster occurs. This include issues with communication, lack of resources, or insufficient training.

Also identifying opportunities, SWOC analysis identifies potential opportunities for improvement in disaster management. This may include new technologies or partnerships that can enhance response efforts. And lastly, identifying potential threats to disaster management efforts. This include natural disasters that are likely to occur in a particular region, limited resources, or logistical challenges.

As provided in the SWOC Analysis, under Disaster Prevention and Mitigation it has been identified that the City of Ormoc has complied to the required staffing and personnel complement of the CDRRM Office as stipulated on RA 10121. However, despite the availability and presence of these positions, these have not been filled up. The City of Ormoc also appropriated funds for DRRM as provided by RA 10121 however, the utilization of the said fund and the accessibility of the Quick Response Fund have been a challenge. Also

noted in the SWOC Analysis, the City of Ormoc has existing necessary databases such as CDRA, CBMS and others but these databases are in need of updating.

The City also has existing partnerships with the private sectors and other CSOs and NGOs. However, there is a need to establish partnerships with other entities concerning critical lifelines such as the Telecommunication Sector and other professional organizations.

For Disaster Preparedness, it has been provided that the City has continuously capacitated its CDRRMO Personnel with ample and necessary training for DRRM even hosting national events such as the National Simultaneous Earthquake Drills and initiated SRR Cluster-specific training. Despite all these, there is still a need to engage more DRRM Stakeholders. There is a need for institutionalizing home-grown DRRM trainers and instructors to ensure continuity of these training down to the communities. Systems for Disaster Operations are also in place but lack institutionalization and harmonization across other agencies and organizations.

Also plans are present such as the DRRM Plan, LCCAP, and Hazard-specific Contingency Plans but these plans also need updating. These plans also need to be aligned to the Regional DRRM plan as well as to the National DRRM Plan. It has also been provided that there are existing disaster volunteers that the City are in partnership with; however, there is still a need to institutionalize its roster in order to make use of them during operations more efficiently.

For Disaster Response, the City has a fully functional 24/7 Emergency Operations Center with trained personnel manning the facility. However, the operations in the EOC needs to be institutionalized through a manual, SOP or guidelines. The personnel in the EOC also needs to be trained for more DRRM-Specific training such as all levels of ICS, EOC Management and MDM. The City also has existing assigned offices and organizations composing the teams under the Disaster Response Cluster however there is still a need to organize the RDNA/PDNA teams and institutionalize its protocols and procedures.

Also noteworthy that the City has access to the Visayas Disaster Response Center in Cebu, funds are available for response operations and a system for donations and relief operations are established.

For Disaster Rehabilitation and Recovery, with the City having an approved Shelter plan and approved CLUP and Zoning Ordinance, it needs to move forward in initiating land development for an identified settlement site/s. The City also has a working cash-for-work program for post disaster incidents however there is a need to create a loan program for MSMEs. Farmers too have access to limited insurance coverage but there are no buffer seeds storage facilities.

To ensure a systematic and prompt disaster rehabilitation and recovery, the City needs to train more DRRM Stakeholders on ICS and PDNA as well as procurement for more necessary equipment for clearing operations.

Generally, the City of Ormoc has systems in place and available databases which are significant in making science-based key decisions. Required and necessary plans are available but needs updating and a few more specific DRRM trainings would definitely boost the capacities of Ormoc's DRRM Stakeholders. With the City's goal of becoming a Resilient City, it is provided that there is still more work to do in terms of Organizational Capacities, Governance, Infrastructure and Innovations. The SWOC Analysis would serve as a guide and a reference in identifying programs, projects and activities that would comprise this 10-year DRRM Plan.

CHAPTER 2: DRRM TARGET SETTING TOWARDS RESILIENCE

VISION STATEMENT

Old Vision (2016-2022)

The previous LDRRMP had no manifested vision specific for disaster resilience. However, it is captured as part of the vision in the Comprehensive Development Plan (CDP) 2017-2023 that aims for a "disaster-resilient environment." The LDRRMP 2016-2020, extended until Calendar Year 2022, is programmatic and output-based focusing on three core programs on: (1) disaster prevention (e.g. repair of health centers and birth centers; retrofitting public infrastructure and utilities such as city hall, water system, evacuation center and operations center); (2) disaster mitigation and climate change adaptation (e.g. support to agricultural production through technology and training, augmentation of medicines and health personnel, reforestation, procurement of garbage compactor); and (3) disaster preparedness and response (e.g. establishing early warning systems, procurement of equipment, and capacity building of the LDRRM Office).

Context of the New Vision (2023-2032)

The successor LDRRMP 2023-2033 captures a vision that marries the mainstreamed DRR-CCA components of the CDP and takes into consideration the programs identified to make the city resilient.

In the short- to medium-term, **Ormoc City is disaster-resilient, climate-adaptive, and growth-inclusive local government driven by risk-informed and environment-friendly citizens and local leaders.**

a. Disaster Resilient. Local governments across all levels in the city and businesses can withstand and immediately recover from disasters especially critical lifelines and services (e.g. water, electricity, hospitals, market). Communities and households are also self-reliant and pro-active.
b. Climate-adaptive. Agricultural technology for climate adaptation and crop protection or other risk financing mechanisms are accessible. Forest conservation and protection is part of inter-generation stewardship.
c. Growth inclusive. Ripples of economic growth brought about by sustained confidence across all sectors, due to their resilience, are felt by everyone across layers of intersectionality (i.e. income class, age, sex, religion, health conditions/impairment).
d. Risk-informed. Individuals are risk-informed and understands complex and compounding risks arising from disasters and climate change. Local leaders are acting on informed decisions and are empowered to enact policies and implement programs, projects, and activities for community-based DRRM-CCA.
e. Environment-friendly. Local leaders are champions in nature-based solutions influencing policy directions and programs to change business and community behavior towards ensuring environmental integrity.

ORMOC CITY DRRM FRAMEWORK

Old Framework

The previous LDRRMP also lacked a framework for disaster resilience to provide the backbone for implementation, monitoring, and evaluation. While DRRM and CCA is appropriately mainstreamed across local development plans (i.e. the CDP includes sub-sector strategies and programs related to environmental protection) – alignment and linkage are not readily apparent especially with national and sub-national plans.

Context of the New Framework

The framework is contextualized by the mutually-reinforcing concepts of resilience and development: (1) resilience and development are directly proportional: when one is strong, so is the other and thus, there should be a clear mapping of their relationship; (2) resilience and development cannot be compartmentalized: it is inter-governmental, multi-stakeholder, and inter-generational thus, DRRM plans, policies, and programs must be aligned across all levels of governance. The two contexts are present in the approach of the rehabilitation and recovery framework which was the basis in introducing a local resilience framework for Ormoc City.

The framework for local resilience has the following features: (1) it adopts the AMBisyon 2040 as the long-term development vision of the life that Filipinos want; (2) it also adopts the long-term goal of the National DRRM Plan 2020-2030 for safe, adaptive, and disaster-resilient communities; (3) it uses sectors (i.e. economic, social, infrastructure) as outcomes that drives strategies for DRR-CCA that will influence programs, projects, and activities across the four DRRM thematic areas of: prevention and mitigation; preparedness; response; and, rehabilitation and recovery; (4) it identifies customizable focus areas for the short- to medium-terms that directs immediate priorities for the sector; and, (5) it recognizes cross-cutting concerns across outcomes to be considered in designing programs, projects, and activities.

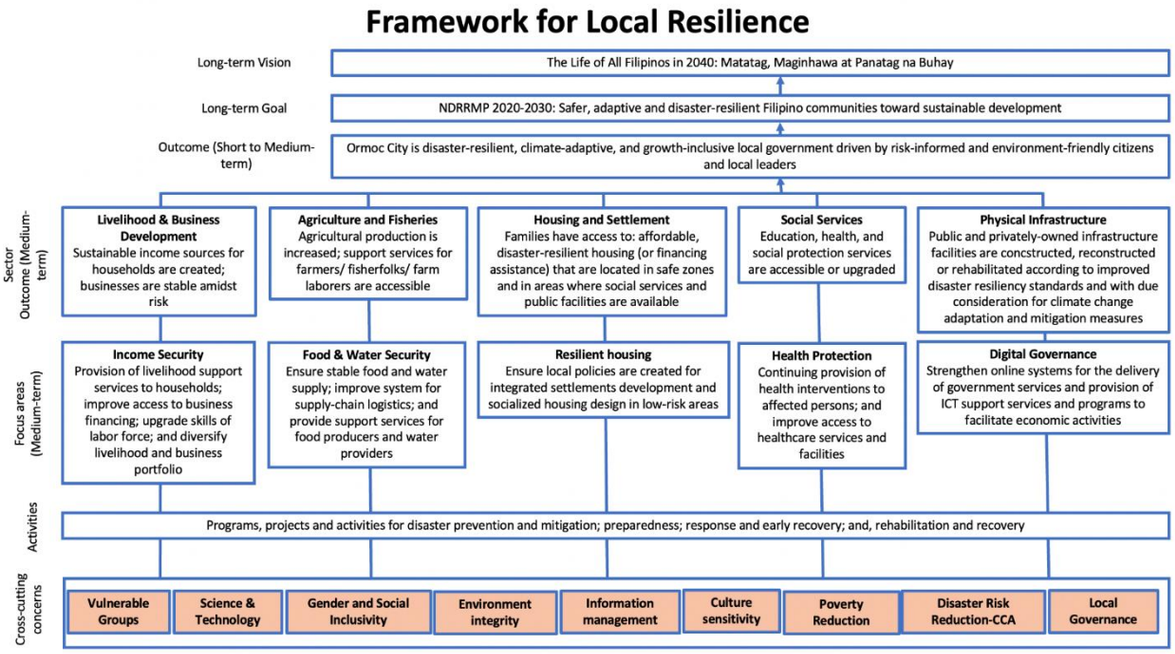

Figure 16. Framework for Local Resilience

Framework is adopted from NDRRMC's rehabilitation and recovery framework developed by NEDA as vice-chairperson for disaster rehabilitation and recovery

GOALS, OBJECTIVES, AND OUTCOMES (NDRRMP) (OUTCOMES ARE FROM THE NDRRMP)

The outcomes in the framework was overlaid with the outcomes in the National DRRM Plan 2020-2030. Observably, the LDRRMP outcomes of the city is heavily connected with the outcomes on prevention and mitigation and rehabilitation and recovery which, is an offshoot of the base framework used. This ensures that communities are risk-informed and have the capacity to absorb the shocks of a disaster across all sectors. A majority of the outcomes in the NDRRMP cut-across all sectors in the framework emphasizing the need to identify specific programs, projects, and activities that can target the LDRRMP sectors.

Table 13. LDRRMP and NDRMMP Outcome Alignments

Sector	Prevention and Mitigation	Preparedness	Cross-cutting outcomes across all LDRRMP outcomes			
			Prevention and Mitigation	Preparedness	Response and Early Recovery	Recovery and Rehabilitation
Livelihood & Business Development: Income security	Disaster-resilient livelihoods and businesses (7)	Sustainable and socially inclusive income sources for households are made available and stability of economic activities restored (19)	• Improved access, understanding and use of updated risk information and research (1) • Implemented risk-centered national, sub-national, and sectoral policies, plans, and budgets (2) • Institutionalized timely, responsive, context- and culture specific early warning systems reaching the last mile (4)	• Enhanced risk awareness and risk-informed decisions and actions of governments and communities (9) • Increased institutional capacities of National and Local DRRM Councils and Offices (10) • Strengthened partnership and coordination among all key actors and stakeholders (11) • Implemented comprehensive and mutually-reinforcing national and local preparedness and response plans, policies, and system (12)	• Well-established disaster response operations with well-equipped workforce (13) • Accurate, reliable, and timely information management (14) • Appropriate early actions are provided to communities (15) • Affected communities are provided with gender and conflict-sensitive basic necessities and services (16) • Implemented an integrated system for early recovery (17)	• Clear policy directions for rehabilitation and recovery (18)
Agriculture and Fisheries: Food and Water Security	Natural resources and ecosystem integrity are improved and sustained (6)	Agricultural production is restored or increased and support services for farmers, fisherfolks, and laborers are made accessible (20)				
Housing and Settlement: Resilient Housing	Increases structural integrity of housing, building, and critical infrastructure (3)	Affected families or individuals have access to: (a) affordable disaster-resilient housing that are located in safe zones where social services and public facilities area available; or, (b) financial assistance to rebuild houses in areas that are declared safe zones (21)				
	Disaster-resilient human settlements (8)[a]					
Social Services: Health Protection	Communities have access to effective, responsive and inclusive social protection, risk financing and insurance mechanisms (5)	Affected individuals, families, and communities have access to responsive, appropriate and adequate education, health and social protection services (22)				
Physical Infrastructure: Digital governance	Disaster-resilient standards in infrastructure are observed during rehabilitation and recovery (23)[b]					

The outcomes in the framework were also overlaid with the goals and objectives in the National DRRM Plan 2020-2030. Expectedly, the NDRRMP goals and objectives cut across the LDRRMP outcomes of the city in the framework. The goals and objectives of the NDRRMP shall guide the targeting in the LDRRMP.

DISASTER RISK REDUCTION AND MANAGEMENT TARGETS

Overview of Timeframes

The ten-year timeframe of the LDRRMP is defined by interventions specific to the sector outcomes. The sectors for livelihood and business development, social services, and agriculture and fisheries are targeted in the short-term for the first three years as they are dole-out provisions for assistance. However, the short-term programs, projects, and activities can be standardized and up-scaled as a continuing program. On the other hand, the medium- to long-term programs, projects, and activities require phasing for completion (e.g. assessment or feasibility study, land acquisition, social preparation) that can be started in the short-term.

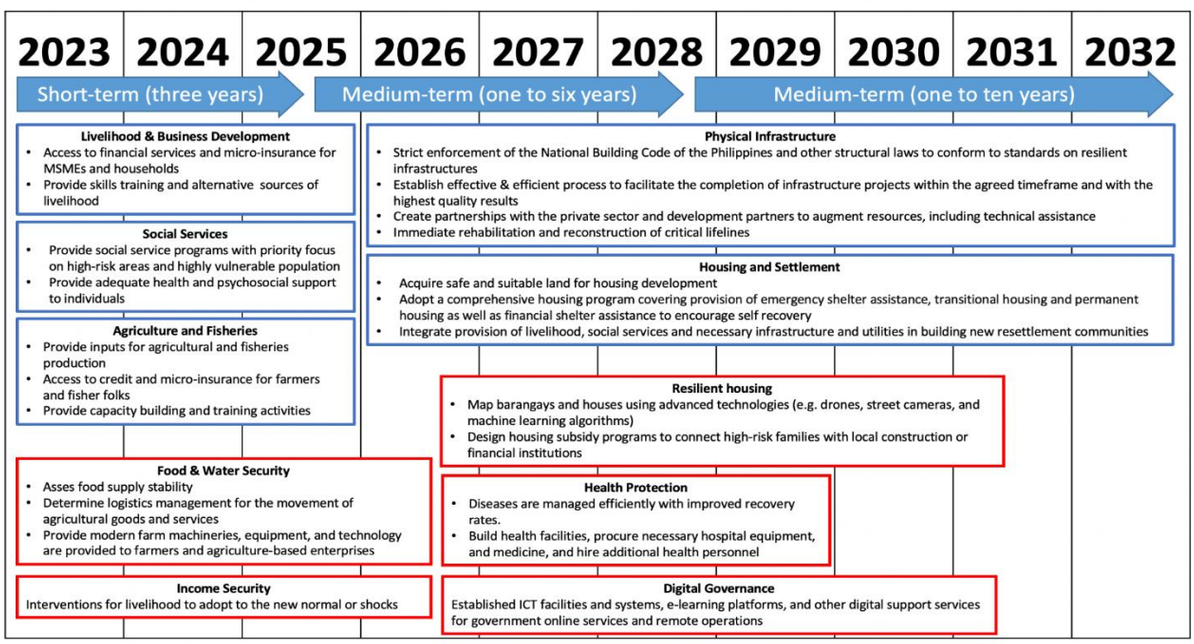

Figure 17. Timeframe per PPA Sector

The LDRRMP also acknowledges that there are activities common to all outcomes that can be lumped together based on timelines. The LDRRMP considers phasing of programs, projects, and activities (e.g. social preparation ins needed in construction if there are displacement, whether physical or livelihood, of individuals) and scaling-up of interventions (e.g. from internal capacity building to community transfers).

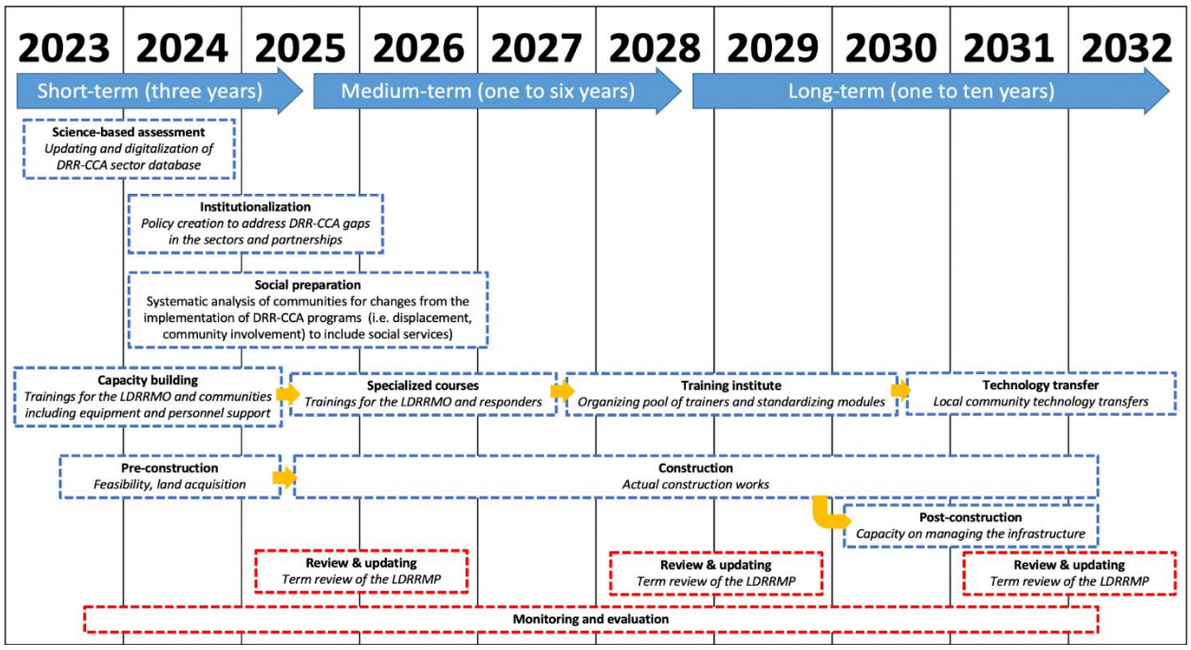

Figure 18. Timeframe per Major Program Classification

Short-term targets

Include PPAs related to science-based assessments; institutionalization; social preparation; capacity building; and pre-construction activities. Specialized DRR courses are implemented by the end of the short-term for personnel that have already completed basic courses (this should be reflected in the baseline data). Pre-construction activities coincide with social preparation activities specially with projects that affect displacement due construction (e.g. housing; reclamation).

Medium-term targets

The medium-term consists of implementation extensions of PPAs related to institutionalization; social preparation; and, specialized courses. The medium-term is also defined by actual construction of infrastructure and the beginning of the development of a training institute.

Long-term targets

In the long term, actual construction continues with activities related to ensuring post-construction needs. Activities to establish a training institute should be completed and technology transfers should be started that can still be upscaled to creating community hubs.

Major updating of the LDRRMP is term-based (every three years) and shall include review of strategies based on the assessment of PPA implementation and results (for completed PPAs). On the other hand, periodic monitoring and evaluation is more frequent - to the least, it is done on annual basis. The monitoring and evaluation method, mechanism, and tool are discussed in detail in Chapter 5.

CHAPTER 3: DRRM MEASURES FOR RESILIENCE PLANNING (PPAS IDENTIFICATION)

Considering all the data provided prior on the City's existing risks and hazards, the City of Ormoc has identified disaster risk reduction and management programs and activities that would help the city realize its vision of becoming resilient which requires a comprehensive assessment of the city's existing risk and vulnerabilities, as well as the potential impact of different types of disasters. In a nutshell, the measure composing this plan involves:

- Conduct a risk assessment: A comprehensive risk assessment can help identify the types of disasters that the city is vulnerable to, as well as the specific areas or populations that are most at risk. This can help prioritize investments in disaster risk reduction and management.
- Review existing policies and plans: It's important to review the city's existing policies and plans related to disaster risk reduction and management, such as emergency response plans, land use plans, and building codes. This can help identify gaps and opportunities for improvement.
- Engage stakeholders: It's important to engage a range of stakeholders in the process of identifying programs and activities that would help the city become more resilient, including local government officials, community groups, businesses, and other key stakeholders. This can help ensure that the programs and activities are tailored to the specific needs of the community.
- Identify effective practices: There are many proven practices in disaster risk reduction and management that can help the city become more resilient, such as early warning systems, infrastructure investments, and community-based disaster preparedness programs. Identifying effective practices can help guide investments and programs.
- Develop a comprehensive strategy: Based on the risk assessment, policy review, stakeholder engagement, and identification of effective practices, a comprehensive strategy should be developed that outlines specific programs and activities to be implemented. The strategy should include clear goals, timelines, and performance indicators to measure progress.

PLANS, PROGRAMS, AND ACTIVITIES BY TIMELINE

Table 14. Plans, Programs and Activities by Timelines

PPA Timelines	Thematic Areas			
	Disaster Prevention & Mitigation	Disaster Preparedness	Disaster Response & Early Recovery	Disaster Recovery & Rehabilitation
Short-Term (1-3 Years) (63 | 44%)	26	31	1	5
Medium-Term (4-6 Years) (31 | 22%)	9	18	2	2
Long-Term (7-10 Years) (48 | 34%)	25	19	2	2
Total (142)	**60 (42%)**	**68 (48%)**	**5 (4%)**	**9 (6%)**

Identified PPAs are mostly short-term programs, which would mean that in order for the City of Ormoc to materialize all these identified PPAs, there is a need for more funding in the next 3 years. Aside from the existing 5% Local DRRM Fund, the city government may need to lobby for more external fundings from higher LGUs, other NGAs and other funding opportunities in order to mobilize these identified PPAs.

PLANS, PROGRAMS, AND ACTIVITIES BY MAJOR PROGRAM CLASSIFICATION

Table 15. Plans, Programs and Activities by Major Program Classification

Major Program Classification	Thematic Areas			
	Disaster Prevention & Mitigation	Disaster Preparedness	Disaster Response & Early Recovery	Disaster Recovery & Rehabilitation
Science-Based Assessment (19 | **13%**)	8	10	0	1
Institutionalization (47 | **33%**)	22	22	2	1
Social Preparation (10 | 7%)	4	5	0	1
Capacity Building (25 | **18%**)	5	18	0	2
Specialized Courses (2 | **1%**)	0	2	0	0
Training Institute (3 | **2%**)	0	2	1	0
Technology Transfer (5 | **4%**)	1	3	0	1
Pre-Construction (12 | **8%**)	8	3	0	1
Construction (15 | **11%**)	12	2	0	1
Post Construction (3 | **2%**)	0	1	1	1
Review And Updating (1 | **1%**)	0	0	1	0
Total (142)	**60 (42%)**	**68 (48%)**	**5 (4%)**	**9 (6%)**

The DRRM Plan identified projects, programs and activities, as provided, shows that most PPAs are under **Institutionalization** which are PPAs aimed to address the current DRR-CCA gaps through policies and organizational interventions. This signifies that in order to help achieve the City of Ormoc become a Resilient City, interventions and policy developments should be done first in the City Government, most notably on personnel complement to various offices directly involved in the DRRM.

PPAs under institutionalization are formulation of PSCP, DRRM-H Plan, Hiring of personnel in various offices like the CDRRMO, and establishing partnership among different sectors and neighboring LGUs to advocate better interoperability among LDRRMCs.

It is also provided that most PPAs are for Capacity-Building. This means that the plan aims not only to capacitate and strengthen their organization but most importantly its constituents and other DRRM stakeholders. various DRR-Related Trainings for the CDRRMC Members and other DRRM Stakeholders include ICS training for every LDRRMCs from the City to the Barangays, and even instituting technical transfer of knowledge by establishing a pool of trainers to help capacitate more constituents relative to the DRRM.

Table 16. Plans, Programs and Activities by Thematic Areas

PPA Sector	Thematic Areas			
	Disaster Prevention & Mitigation	Disaster Preparedness	Disaster Response & Early Recovery	Disaster Recovery & Rehabilitation
Livelihood and Business Development: Income Security (14 | 10%)	7	6	0	1
Agriculture and Fisheries: Food and Water Security (9 | 6%)	4	4	0	1
Housing Settlement: Resilient Housing (3 | 2%)	1	1	0	1

Social Services: Health Protection (**41 | 29%**)	10	31	0	0
Physical Infrastructure: Digital Governance (**36 | 25%**)	27	6	1	2
All Sectors (**39 | 27%**)	11	20	4	4
Total (142)	**60 (42%)**	**68 (48%)**	**5 (4%)**	**9 (6%)**

PLANS, PROGRAMS, AND ACTIVITIES BY PPA SECTOR

The identified PPAs in the plan also shows that the need for heavy investment are emphasized for **Physical Infrastructure and Social Services**. This means that there are infrastructures need to be built to address the current risks of the city, which goes hand-in-hand in providing emphasis for a stable and continuous delivery of basic services for its constituents especially at a time of disaster.

Under physical infrastructures, PPAs include construction of a DRRM Training Facility, update of the Sewage Master Plan, storage facilities and retrofitting/establishment of evacuation centers.
For social services, these are PPAs aimed to ensure access to protective services. PPAs include the various trainings for the community like the routine drills and community-based DRRM with emphasis to disaster preparation and response (training on MDM, CCCM, Operation Listo).

To provide more details, here are the following DRRM PPAs set to be implemented in its first three years:

Legend:					
Tsunami Hazard	Ground Shaking Hazard	Ground Rapture Hazard	At least 2 Hazards	At least 4 Hazards	All Hazards
Landslide Hazard	Liquefaction Hazard	Flood Hazard	At least 3 Hazards	At least 5 Hazards	

Table 17. Disaster PRevention and Mitigation PPAs (Short Term)

DISASTER PREVENTION AND MITIGATION					
Programs, Projects and Activities (PPAs)	Output / Timeframe	Activities	Budget (implementing year)		
	2023-2025		2023	2024	2025
Climate and Disaster Risk Information Database Management	CDRA database updated following the AR6 of DHSUD Adoption and Utilization of GeoRisk PH Platform	• Creation of TWG • Conduct of meetings, trainings, workshops, writeshops, etc. • Database Management • Integrating risk information into the GeoRiskPH Platforms • Integration of Risk information to local plans and policies	✓	-	-
Strengthened IEC campaign on GeoRisk PH platforms	Introduction and orientation on GeoRisk PH Platform to Ormoc City DRRM Stakeholders and BDRRMCs	• Conduct of IEC campaigns • Conduct of trainings	-	✓	-
Hiring of technical personnel/capacity building on risk assessment and mapping	Two (2) hired and trained personnel for risk assessment and mapping	• Creation of Position • Conduct of Trainings • Procurement of equipment and supplies	-	✓	✓
Updating of database	Establishing the Database Management Team and Database Management Plan	• Creation of Database Management Team • Conduct of database management planning • Inventory of LGU databases • Conduct of meetings, trainings, seminars, etc	-	✓	-
Creation of cloud-based information management system	information Management System created	• Enactment of an ordinance allowing the creation, purchase of a cloud-based IT system • Creation/Purchase on in-house system • Creation of new positions (high-technical) • Provision of internet connection to all LGU offices	-	✓	✓

Hiring of technical personnel/capacity building activities on Information Management	Two (2) hired and trained personnel for Information Management	• Creation of Positions • Conduct of trainings	-	✓	✓
Formulation of Public Service Continuity Plan	Public Service Continuity Plan Formulated and active	• Creation of TWG • Plan formulation • Presentation of the plan to CDRRMC and SP	✓	-	-
Updating of City DRRM Plan and Contingency Plans	DRRM Plans updated and contingency plans for every identified hazards are formulated	• Creation of CDRRMP and ConPlan TWG • Conduct of meetings, seminars, workshops, and writeshops • Presentation to CDRRMC and SP • Review of CDRRMP by OCD8	✓	✓	✓
Updating of DRRM-H plan	DRRM-H Plan formulated and approved by the DOH	• Creation of TWG • Conduct of meetings, seminars, workshops, and writeshops • Presentation to CDRRMC and SP • Review of DRRM-H plan by DOH	✓	-	-
Update inventory of critical infrastructure	Inventory of critical infrastructure created and updated; appropriate retrofitting and initiatives conducted to critical infrastructures;	• Conduct training and orientation of the experts on how to assess the infrastructure on each barangay. Assessment of the infrastructure resiliency to hazards.	✓	✓	✓
Capacity Building on standards and guidelines on the redesign, retrofitting or operational modifications of infrastructures	City Engineering Office, OCArch and CDRRMO Personnel trained on the redesign, retrofitting or operational modifications of infrastructures	• Conduct training on all concern agencies (Contractors, Engineers, LGU Offices (OBO, CEO, CGSO, OCArch) and information dissemination to all barangays	✓	✓	✓
Hiring of technical personnel/capacity building on Infrastructure Audit, Structural Integrity Assessment, etc.	hired and trained personnel for Infrastructure Audit, Structural Integrity Assessment, etc.	• Conduct Hiring process and train hired personnel on infrastructure audit, structural integrity assessment, etc.	✓	✓	✓
Establish Partnership with professional organizations (UAP, PICE, ASEP) in resilient infrastructure designs	MOA signed with NGOs for resilient infrastructure designs	• Conduct training and orientation	✓	✓	✓
Procurement of landslide and storm surge monitoring devices (but DOST PAGASA will install a Coastal Camera in Ormoc City)	Landslide and storm surge monitoring devices procured	• preparation of documents, BAC Processes, procurement of devices	✓	✓	✓
Provision of preventive maintenance of EWS devices	preventive maintenance of EWS devices provided to hazard-specific target barangays	• Conduct repairs and maintenance of EWS devices to hazard-specific target barangays	✓	✓	✓
Insure EWS devices and DRR Equipment	EWS devices and DRR Equipment insured	• Meeting with parametric insurance providers other than GSIS • Budget appropriation for insurance	-	✓	✓
Capacity building of CDRRMO technical personnel on EWS	EWS training conducted to CDRRMO Personnel	• Conduct of trainings	-	✓	-
Capacity-building activities (protocol development, training, and simulation exercise) on community-based EWS in barangays	capacity-building activities (protocol development, training, and simulation exercise) on community-based EWS to hazard-specific target barangays	• Conduct of trainings	-	✓	-
Institutionalization of SOP/guidelines on EWS	SOP and guidelines on EWS Formulated	• Creation of TWG • Conduct of meetings, trainings, seminars, workshops/writeshops • Presentation to CDRRMC and SP • Conduct of simulation exercise	-	✓	✓
Establish PWD-inclusive EWS	Functional PWD-inclusive EWS	• Development of design for PWD-inclusive EWS • Installation of PWD-inclusive EWS in various barangays	✓	✓	✓
Strict Monitoring of protected areas	monitoring mechanism for protected areas created	• Close coordination with the DENR and BFAR • Conduct biodiversity monitoring system • Intensification of bantay-dagat	-	✓	✓
Alternative livelihood options for Disaster Victims	alternative livelihood options available for Disaster Victims	• Conduct of trainings	-	✓	✓

Conduct of IEC on risk financing in the business sector	IEC on risk financing to target business sector conducted	• Conduct of IEC campaigns	-	✓	✓
Access National funding for housing units	signed parternships with NGAs for funds access intended for housing	• Forging agreements with NGA	-	✓	-
Establish innovations in redesigning housing units	Capacity building conducted in exploring and training on innovations in redesigning housing units	• Conduct training and orientation on the latest National Building Code of the Philippines by coordinating the partner agencies and professional organizations	✓	✓	✓
Installation of solar panels	solar panels installed to target facilities and infrastructures	• Installation of solar PV power system	✓	✓	✓
Waste to energy technology deployment	training on waste to energy technology deployment conducted to specific personnel	• Conduct of trainings	✓	-	✓
Comprehensive enlistment of farmers to crop insurance	list of target farmer beneficiaries created; provision of crop insurance to affected farmers and fsiherfolks	• Campaign, and facilitates application and imdemnity claims	✓	-	✓
Construction of fish attracting devices	constructed 6 units fish attracting devices; and training on the use of device to concerned stakeholders conducted	• Underwater Assessment, Procurement, Capability Training, Installation and monitoring	-	✓	✓
Construction & establishment of artificial habitats	artificial habitats constructed and installed	• Site inspection and validation, Underwater assessment, preparation of POW, Procurement, Capability Training, Installation and monitoring	-	✓	✓
Design and development of fish port complex	fish port complex constructed	• Construct and maintain Fish port Complex	✓	✓	✓
Beach forest project	beach forest project initiated and necessary orientation and trainings conducted	• Mangrove growing • Ecotourism management training	✓	✓	✓
Toilet design study and implementation	capability building activities on toilet design study conducted to concerned stake holders	• Conduct capacity building activities on toilet design study	✓	✓	✓
Installation of slope protection technology	slope protection technology installed	• Study and survey to all barangays to install slope protection and to check the existing slope protection resiliency to hazards; Designing and create program of works; Maintained and construct slope protection on selected areas	✓	✓	✓
Tourist hubs development	tourist hubs identified with manpower complement and required trainings	• Identification of tourist hubs • Conduct of trainings	-	-	✓
Installation of rainwater harvester	100 rainwater harvester installed	• Install rainwater harvester and to create guidelines on new new building constructed	✓	✓	✓
Improvement of roads, sidewalks, and drainage system	roads and sidewalks paved, repaired and improved, repairs and expansion for the drainage system conducted	• Construct, re-design and maintained the roads and sidewalks and expansion of drainage system	✓	✓	✓
Comprehensive parks development	acquisiton and lot procurement on target areas for park development	• Training and development of urban design for green open spaces	✓	✓	✓
• Rehabilitation Irrigation Canals • Solar powered (SPIS) • Small Scale irrigation system (SSIP) • Pump Irrigation system for open source (PISOS) • Diversion Dam (DD)	Rehabilitated irrigation canals Installed 3 SSIP Installed 15 PISOS	• Conduct Site validation and inventory • Prepare POW • Project procurement • Construction and Installation • Project validation and monitoring	-	✓	✓
Design and development of post-harvest and buffer stock facilities	Buffer seed stocks and post-harvest storage facilities constructed	• Budget allocation, preparation of documents, bac process and awarding of contractor	✓	✓	✓
Formulation of policy granting incentives to MSMEs with BCP	Policy grancting incentives to MSMEs with BCP	• Craft policy to grant incentives to MSMEs with BCPs	-	✓	-
Formulation of policy granting incentives to transformed informal businesses	Policy granting incentives to transformed informal businesses	• Craft policy to grant incentives to transformed Informal business	-	✓	-

Solar Street lightings	Decrease electric consumption cost & carbon emission	• Install solar streetlightings in the city and in various barangays	✓	✓	✓
Establishment of LGU-Managed Loan Facility	LGU-Managed Loan Facility for MSMEs	• Creation of TWG to establish the LGU-Managed Loan Facility • Benchmarking on Davao City's LGU-Managed Loan Facility • Institutionalize the LGU-Managed Loan Facility	✓	✓	✓
Institutionalize BCP template for the MSMEs in Ormoc City	Standard BCP template for MSMEs in Ormoc City	• Conduct of planning activities • Institutionalization of BCP template	-	✓	-
Procurement, establishment, & installation of AWS	Real time Weather information	• Procurement, establishment and installation, calibration, capability training	-	✓	✓
Forest resources and species suitability study	*Forest resources and species suitability study*		✓	✓	✓
Watershed characterization study	*Watershed characterization study*		✓	✓	✓
Reforestation to denuded areas (CBFM, TREE GROWING, ARBOR DAY, NGP, FLUP)	3 percent of denuded area as of CY2023		✓	✓	✓
Capacity Building on People's Organization (CBFM Project sites)	3 Pos organized/capacitated for CBFM project sites		✓	✓	✓
Restoration of riparian and sub watershed areas (Malbasag River, Pagsanga-an River, Haubon River	3 percent of priority riparian forests		✓	✓	✓
Coastal resource and species suitability study	*Coastal resource and species suitability study*		✓	✓	✓
Coastal resource management plan formulation	*Coastal resource management plan*		✓	✓	✓
Mangrove restoration/ expansion and protection (Macabug, San Antonio, Linao, Naungan, San Juan, Lao and other Ormoc mangrove areas.	6 percent of the restored mangrove forests in priority areas		✓	✓	✓
Structure assessment study of Solid Waste Management Infrastructure assets	Structure assessment study of Solid Waste Management Infrastructure assets		✓	✓	✓
Retrofitting of Sanitary Landfill, MRFs, Waste Pick-up points	Disaster proof Solid Waste Infrastructures	• construction of Disaster proof Solid Waste Infrastructures	✓	✓	✓
Establishment and support for Ormoc City DRRM Operations Center Integrated Multi-hazard Early Warning System	Functional CCTV monitoring systems and hazard monitoring device/equipment in-place	• Procurement and installation of CCTV monitoring systems and hazard monitoring device/equipment • Maintenance of CCTV monitoring systems and hazard monitoring device/equipment	✓	✓	✓
Lot Acquisition for Various DRRM Development Programs	Identification of safe and suitable lot	• Conduct of meetings • Preparation of budget plan	-	-	✓

Table 18. Disaster Preparedness PPAs (Short Term)

DISASTER PREPAREDNESS					
Programs, Projects and Activities (PPAs)	Output / Timeframe 2023-2025	Activities	Budget (implementing year)		
			2023	2024	2025
Create inclusive and gender-sensitive DRRM IEC materials	production of gender-sensitive DRRM IEC Materials and all barangays provided	• Gender Sensitivity Orientations and Seminars	✓	✓	✓
Formulation of Risk Communications plan	Risk Communication plan formulated and implemented	• Creation of Risk Communications Plan TWG • Formulation of Risk Communications Plan	-	✓	-
Hiring of technical personnel/capacity building on Exercise Design	hired and trained personnel for exercise design, conducted capacity building initiatives to DRRM Stakeholders	• Disaster preparedness and mitigation measures training for community based tourism organization.	✓	✓	✓

Conduct of capacity-building (plan/protocol development, drill) in barangay level (e.g. evacuation drill, flood drill, etc)	capacity building activities conducted to all barangays (15% of the total business registrant per brgy annually)	• BCP Workshop for business establishments • Financial Literacy Seminar for MSMEs	✓	✓	✓
Conduct of capacity-building (plan/protocol development, drill) in barangay level (e.g. evacuation drill, flood drill, etc)	capacity building activities conducted to all barangays	• Basic Life Support Training (120 pax/year); Standard First Aid Training (120 pax/year)	✓	✓	✓
Basic and Advanced Life Support	ACDV roster established; relevant training provided to volunteer groups	• Basic Life Support Training for Community Based Organization	✓	✓	✓
Training of School DRRM Coordinators in private schools	Trained school DRRM Coordinators	• Trainings and Seminars	✓	✓	✓
Hiring of personnel with technical capacity to support CDRRM Office services	Four (4) technical support for CDRRM Office hired and trained	• SP Resolution creating additional CDRRMO Personnel • Budget allocation for PS • Conduct of trainings	-	✓	✓
Capacity-building to CDRRMC member agencies	DRRM Capacity Building initiatives conducted to CDRRMC Members	• Conduct of Trainings and Seminars	✓	✓	✓
Establish 911 Emergency Dispatch System	Emergency Dispatch System established	• Procurement of Special Numbers for Dispatch and corresponding communication equipments • Sustaining the Emergency Dispatch System	✓	✓	✓
Formulation of Operations Center SOP/Manual	Operations Center SOP/Manual formulated and institutionalized	• Creation of TWG • Plan formulation • Conduct of trainings, seminars, meetings, simulation exercises, etc	✓	✓	-
Institutionalization of interoperability with DRRMOs in Leyte Province (Leyte DRRMCs Telecommunications and Response Network)	Collaboration thru MOA/Federation among LDRRMOs in Leyte Province established	• Adoption of the Federation thru SP Resolution • Budget allocation for Annual contributions/membership fees	-	✓	✓
Institutionalization of Coordination mechanism/protocols between city and barangays	DRRM Coordination Protocols for the City and Barangay OpCen institutionalized	• Creation of TWG • Plan formulation • Institutionalization • Conduct of trainings, seminars, meetings, simulation exercises, etc	-	✓	✓
Institutionalize ACDV roster and accreditation	ACDV roster established; relevant training provided to volunteer groups	• Conduct of Training and Seminars	✓	✓	✓
Contingency plans updating	Contingency Plans for various hazards updated	• Creation of TWG • Planning formulation • Conduct of trainings, seminars, simulation exercises • Adoption/approval	-	✓	✓
Formulation of contingency plans for other hazards	Contingency Plans for various hazards formulated	• Creation of TWG • Planning formulation • Conduct of trainings, seminars, simulation exercises • Adoption/approval	-	-	✓
Formulation of Public Service Continuity Plan	Public Service Continuity Plan formulated and implemented	• Capacity Training for PSCP Formulation targeting all business establishments and service providers	✓	✓	✓
Institutionalized protocols/guidelines in Operation Listo Manual	Orientation and Training on Operation Listo Manual conducted to CDRRMC Members and All Barangays	• Trainings and Seminars	✓	✓	
Institutionalization of response clusters and protocols/guidelines	Skills & Enhancement Training for quick response during calamities	• Skills and Enhancement Training for quick response during calamities for Barangay Tanods, BHW & BNS	✓	✓	✓
Establish pool of trainers	Pool of trainers established and provided with relevant DRRM Trainings	• Trainers' Training for Team to conduct training on formulation and review the Business Continuity Plans (BCPs) of businesses	✓	-	✓
Establish pool of trainers	Availability of local trainers/cadres	• Conduct of TOT for BLS and Standard First-Aid	✓	✓	✓
Capacity Building on ICS to develop local Trainors/Cadres	CDRRMC Members provided with trainings of all ICS Levels	• All Levels of ICS Training	✓	✓	✓

Construction of Training facility to sustain continuous DRRM training activities	DRRM Training Facility constructed	• Preparation of POW and Construction of DRRM training Facility	-	✓	✓
Standardization of training modules	DRRM Training Modules formulated and implemented	• Workshop on Module formulation	✓	✓	✓
Establish a digitalized inventory system	CDRRMO Inventory system digitized	• Conduct CDRRMO Inventory System Digitized	✓	✓	✓
Construct additional storage facilities	7 storage facilities established	• Construct Storage facilities @ Linao, Ipil, Mejia, Curva, Valencia, Gaas,and San Pablo	✓	✓	✓
Hiring/Designation of technical personnel performing preventive maintenance, supply and inventory management, and equipment handling, to ensure resource readiness. Engineer II (Maintenance Engr.)	hired and trained technical personnel performing preventive maintenance, supply and inventory management, and equipment handling	• Hired technical personnel to perform preventive maintenance, supply and inventory management and equipment handling	✓	✓	✓
Filling up of a regular position for office property custodian	hired personnel for the position in the office property custodian	• Duties and responsibilities of a office property custodian	✓	✓	✓
Improve Inventory system on stockpile	stockpile inventory updated	• Update stockpile inventory	✓	✓	✓
Standardization of resilient design for evacuation centers	all identified evacuation centers upgraded to conform with DSWD Standards	• Upgrading of design and facilities in all evacuation centers	✓	✓	✓
Establish database management on Evacuation Centers (e.g. assigning Evac Center IDs, geotagging, etc)	Database management on Evacuation Centers established	• Conduct of inventory and geotagging of evacuation centers	✓	-	-
Retrofitting of current evacuation centers (open covered courts are used	30 target evacuation centers retrofitted	• Retrofitted 30 evacuation centers	✓	✓	✓
Training for MDM	Trained and capacitated Members of the City MDM Team	• Conduct MDM Training	✓	✓	✓
Institutionalize and standardized evacuation center planning and management	CDRRMC members trained on Camp Management and other relevant Trainings on evacuation center planning	• Conduct of CCCM Training for camp managers	✓	✓	✓
Information and education campaigns on solid waste management	IEC materials on solid waste management produced and capacity building initiatives conducted to all barangays	• Conduct capacity building on solid waste management (SWM) • Conduct orientation on SWM • Install visual aids at strategic areas within the city and barangay	✓	✓	✓
Community-based surveillance and monitoring of diseases	Community-based surveillance and monitoring of diseases mechanism formulated and implemented	• Basic Epidemiology and Event-based Surveillance Training (BEES) - 60 BHERTs per Year	✓	✓	✓
Biodiversity assessment	Biodiversity assessment conducted	• Consultative meetings, data gathering and conduct of assessment	-	✓	✓
Comprehensive hydrology study	capability building activities on hydrology conducted; linkage with science-based agencies established thru MOA/MOU	• Consultative meetings, data gathering and ceremonial signing of MOA	-	✓	✓
Updating of Forest Land Use Plan	FLUP Updated	• Data gathering, update of FLUP	-	✓	
Formulation on Drainage and Sewerage Master Plan	Drainage and Sewerage Master Plan formulated	• Formulated drainage and sewerage Master Plan	-	✓	✓
Conduct of Season Long Training on Climate Smart Agriculture	6 Climate Smart-FFS per year to target beneficiaries	• Facilitates/Conducts CS-FFS	✓	✓	✓
Increased production of freshwater fingerlings from 60,000 pcs to 200,000 pcs	distributed fingerlings to 600 backyard freshwater pond operators	• Construction of perimeter fence, Improvement of water facility, and procurement of other materials and equipments (ex. multi-parameters, aerators, etc.)	-	✓	✓

Training for alternative livelihood	-training of alternative livelihood for identified trainers and stakeholders; conduct of alternative livelihood training to target barangay beneficiaries	• Livelihood training	✓	✓	✓
MSME Information system redundancy	Established MSME information system redundancy	• Project Conceptualization • System Development • Implementation	✓	✓	✓
Enhancement of Business and Building Permitting System	Enhanced Electronic Business and Building Permitting system	• System development for: 1. Online Application and payment 2. Online uploading of documentary requirements 3. Retrieval of uploaded documents	✓	✓	✓
Purchase of Emergency/Disaster Equipment and Supplies	Acquisition of DRR equipment and supplies	• AIP and LDRRMF Investment Plan and Budget	✓	✓	✓
Purchase of Emergency/Disaster Transportation Equipment and Construction/Heavy Equipment	Acquisition of various transportation equipment and/or construction & heavy equipment	• Procurement	✓	-	-
ACDV/Responder Care Program	Provision of insurance and needed resources to ACDVs and other emergency/disaster responders	• Accreditation of emergency/disaster responders • Update Roster of ACDVs • Payment to insurance premiums	✓	✓	✓
Ormoc CIty DRRM Operations Center Program	Maintain and sustain services of the Ormoc City DRRM Operations Center	• Procurement for various repair and maintenance/preventive maintenance expenses • Provision of fuel requirements • Procurement for meals support • Preparation of travel expenses in case of deployment • Capacity-building for OpCen/EOC staff • Procurement of needed supplies and equipment • Procurement for telco expenses	✓	✓	✓
Purchase of FNFI in case of sudden emergencies and for prepositioning in case of imminent threat	Available stockpile of FNFI for sudden emergencies and in case of imminent threat	• Procurement • Stockpile • Inventory • Distribution	✓	✓	✓
Establish capacity-building activities on Resilient Housing and Human Settlements	Resilient Housing and Human Settlements Training conducted for DRRMC Members and stakeholders	• Conduct of trainings		✓	✓
Established and updated baseline data	Validate and Established Agri-fishery data system : Barangay-based and City wide Based	• Hire enumerators; conduct of trainings: for enumerators, PBs, Kagawad In-charge in Agriculture, Brgy Secretary; Data: gathering, processing and generation.	-	✓	✓
Capacity-building of CDRRMO personnel, CDRRMC members, BDRRMC members and other stakeholders on ICS	CDRRMC Members are trained in at most 2 levels of ICS	• Conduct Level 1 and 2 ICS training to members (2 pax/barangay semi-annually)	✓	✓	✓
Institutionalize IMT	EO created for IMT, IMT Members trained	• Formulation of Guidelines and EO in the Creation of IMT	-	-	✓
Capacity Building on ICS for more local cadres	target LGU Personnel trained in all levels of ICS	• Orientation on ICS Guidelines and Response Training to trained personnel	✓	✓	✓
Institutionalize protocols/guidelines in Operation Listo Manual	CDRRMC Members and BDRRMCs trained on Operation Listo	• Symposium and Orientation on Operation Listo to identified CDRRM Members • Conduct Information Campaign on Operation Listo	✓	✓	✓
MOA with telecommunications companies on telco restoration	Signed MOA/MOU with identified partner Telco companies	• Creation of Technical Working Group for Regular Meetings • Identify existing Telcos in the City • Identify the Terms of Agreement • Provision of Connection to High Priority Key Offices including but not limited to Tri-Bureau, LGU and NGA	✓	✓	✓
MOA with construction firms on debris clearing operations	Signed MOA/MOU with identified partner Construction firms	• Identify Hazard Prone Areas in the CIty for HIgh Priority on Clearing Operations • Identify the Terms and Agreements in MOA	✓	✓	✓
Digitalization of relief operations system	Relief operations system digitized; training on the use of system to target personnel	• Actual digitalization of data, training of concerned personnel	-	✓	✓

Community-Based DRRM capacity-building (evacuation planning and evacuation drills) in the barangay level	Community-based DRRM Capacity building to target hazard-specific barangays conducted	• Conduct of Basic Response Seminar (2 pax/barangay) 2 Batches	✓	✓	-
Institutionalization of RDANA	All CDRRMC Members trained on RDANA	• Conduct of annual RDNA Training and refresher course	✓	✓	✓
Capacity-building activities (training) on RDANA in order to create local RDANA teams	BDRRMCs trained on RDANA	• Conduct of annual RDNA Training and refresher course for BDRRMCs	✓	✓	✓
Capacity building activities on PFA and other MHPS services	target personnel trained on PFA and MHPS	• preparation of training documents; conduct of actual training	-	✓	✓
Standardized training module on PFA and other MHPSS	PFA and other MHPSS Training Modules created and rolled out	• PFA and MHPSS Planning Workshop and Writeshop On Standardization of Modules	✓	✓	-
Establish system on updating the inventory of evacuation centers	Database management on Evacuation Centers established	• Data gathering and updating of database	-	✓	-
MOA with private establishments as alternate evacuation centers	signed MOA/MOU with partner private companies	• Conduct of ceremonial signing	-	✓	-
Digitalization of IDP registration	Digitized IDP registration institutionalized	• Conduct Orientation/Training on Digitalization of IDP Registration	✓	✓	✓
Capacity building on CCCM at the barangay level	All barangays trained on CCCM	• Identification of target pax; preparation of documents and conduct of actual training	-	✓	-
Standardized training module on CCCM	CCCM Module formulated and implemented	• Consultative meetings and publication of module	-	✓	✓
Institutionalization of Health Emergency Management System (HEMS) and Epidemiological Surveillance Unit (ESU) organizational structure	Ordinance creating the HEMS and ESU passed; hiring and training for HEMS and ESU Personnel conducted	• Approval of Ordinance on Creating the HEMS and ESU (2023) • Implementation of Ordinance (2023) • Dissemination on the Hiring of HEMS and ESU staff • BLS, SFA Training for HEMS Staff (2023 to 2024) • BEES Training for ESU Staff (2023)	✓	✓	-
Formulation of Contingency plan for Emerging Infectious Disease	Contingency Plan for MEID formulated	• MEID Planning Workshop and Writeshop	✓	✓	-

Table 19. Disaster Response & Early Recovery PPAs (Short Term)

DISASTER RESPONSE & EARLY RECOVERY					
Programs, Projects and Activities (PPAs)	Output / Timeframe	Activities	Budget (implementing year)		
	2023-2025		2023	2024	2025
Standardized DRRM reporting templates	Institutionalization of Operation Listo; training of target Offices on Reporting Templates and Mechanism	• Approval of Ordinance relative anent thereto Institutionalization on Reporting (2023) • Implementation of Ordinance, Creation of TWG • Distribution of Templates and Training Activity (2024)	✓	✓	✓
Institutionalized guidelines/protocol on information gathering, reporting, and dissemination	Disaster Reporting guidelines and protocols crafted. Orientation on guidelines provided to target offices and personnel	• Creation of TWG • Conduct Orientation to Safety Officers per Office	✓	✓	✓
Updated baseline data	DRRM Baseline data established and updated	• Data gathering and updating of database	✓	-	-
30 evacuation centers to be redesigned/retrofitted	30 target evacuation centers retrofitted	• Rehabilitation / Retrofitted 30 evacuation centers	✓	✓	✓

Table 20. Disaster Recovery and Rehabilitation PPAs

DISASTER RECOVERY & REHABILITATION					
Programs, Projects and Activities (PPAs)	Output / Timeframe	Activities	Budget (implementing year)		
	2023-2025		2023	2024	2025
Training of PDNA	5 PDNA Technical personnel hired	• Creation of 5 positions for PDNA	-	-	✓
Formulation of Disaster Recovery and Rehabilitation Plan	Disaster Recovery and Rehabilitation Plan formulated	• Creation of TWG for DRRP • Conduct training on PlanSmart Ready to Rebuild Web Application for Quick effective Disaster Rehabilitation and Recovery • Conduct bench-marking, city to city exchange • Formulation of the DRRP	-	✓	✓
Establish buffer seed stocks and storage facilities	POW AND FS prepared	• Program of Works, Detailed Engineering Designs and Plans • Feasibility Study • Budget Allocation	✓	-	-
Establish buffer seed stocks and storage facilities	Storage facilities constructed	• Bidding and procurement process • Project Execution • Monitoring and Evaluation	-	✓	-
Establish buffer seed stocks and storage facilities	Seeds procured and distributed	• Identification of seeds and quantity to be procured • Procurement & bidding process • Monitoring and Evaluation	-	-	✓
LGU funded housing program	coordination with appropriate NGAs for lot acquisition thru MOA/MOU; paperworks and legal processes made for the lot acquisition	• Inventory of lot owners • Negotiation • Legal process for lot acquisition and other documents • Proposal for funding	✓	✓	✓
Capacity building on PDNA	PDNA Training conducted to C/BDRRMC Members	• Conduct training on PDNA to C/BDRRMC Members	✓	✓	✓
MSME LOAN PROGRAMS	Operational LGU managed loan program	• Program conceptualization • Budget allocation • Identification of Beneficiaries	-	-	✓
• Conduct clearing operation and clean-up • Procurement of waste collection vehicle (dump truck with boom)	Conduct clearing operation and clean-up, Procurement of waste collection vehicle (dump truck with boom)	• Conduct clearing operation and clean-up, preparation of documents, BAC Process and Procurement of waste collection vehicle (dump truck with boom)	-	✓	✓

INNOVATIONS

Innovative solutions play a crucial role in disaster management because they can provide more efficient and effective ways to reduce risk, prepare for, respond to, and recover from disasters. Included in this plan are innovative initiatives aimed to:

- Faster and more effective response: Innovative solutions, such as real-time data analytics, can help emergency responders assess and respond to disasters more quickly and effectively. This can save lives and minimize damage.
- Better risk reduction: where PPAs can provide better risk reduction strategies through new technologies, such as early warning systems, flood modelling, and land-use planning tools. These technologies can help reduce the impact of disasters by better predicting and managing risks.
- Improved communication and coordination: can help improve communication and coordination among different actors involved in disaster management, such as emergency responders, government agencies, and communities. This can lead to more effective and efficient disaster response and recovery.
- More efficient use of resources: can help optimize the use of resources in disaster management.
- Increased community engagement: can also help increase community engagement in disaster management.

Included in this plan are the following innovative programs, projects and activities:

- Strengthened IEC campaign on GeoRisk PH platforms
- Establish Partnership with professional organizations (UAP, PICE, ASEP) in resilient infrastructure designs

- Installation of solar panels
- Construction & establishment of artificial habitats
- beach forest project
- Comprehensive parks development
- Solar Street Lightings
- Procurement, establishment & installation of AWS
- Establishment and support for Ormoc City DRRM Operations Center Integrated Multi-hazard Early Warning System
- Training of School DRRM Coordinators in private schools
- Establish 911 Emergency Dispatch System
- Institutionalization of interoperability with DRRMOs in Leyte Province (Leyte DRRMCs Telecommunications and Response Network)
- Construction of Training facility to sustain continuous DRRM training activities
- ACDV/Responder Care Program
- Community-Based DRRM capacity-building (evacuation planning and evacuation drills) in the barangay level
- Digitalization of IDP registration
- Standardized training module on CCCM

LIST OF DISASTER RISK REDUCTION AND MANAGEMENT MEASURES PER THEMATIC AREA

Disaster Prevention and Mitigation

Table 21. Disaster Prevention and Mitigation PPAs over a 10-year timeframe

DISASTER PREVENTION AND MITTIGATION							
Hazard	Target	Programs, Projects and Activities (PPAs)	Output / Timeframe	Output / Timeframe	Output / Timeframe	Office/s Responsible	Partner Agencies
			2023-2025	2026-2028	2029-2032		
All Hazards	Climate and Disaster Risk Information updated and integrated into plans and policies	Climate and Disaster Risk Information Database Management	CDRA database updated following the AR6 of DHSUD Adoption and Utilization of GeoRisk PH Platform	CDRA database updated following the AR6 of DHSUD Adoption and Utilization of GeoRisk PH Platform	CDRA database updated following the AR6 of DHSUD Adoption and Utilization of GeoRisk PH Platform	CPDO, CDRRMO	DHSUD, DILG, PHIVOLCS, PAGASA, DENR-MGB
All Hazards	Risk assessment for Geologic and other hazards created	Formulation of risk assessment for Geologic and other hazards	Risk Assessment for every identified hazard formulated and is used as bases in the update and formulation of DRR-Based plans (LCCAP, DRRMP, LDIP, CCET-AIP)		updated Risk Assessment for every identified hazard	CPDO, CDRRMO	PHIVOLCS, PAG-ASA, DENR-MGB
All Hazards	IEC Campaign on GeoRisk PH conducted to all barangays	Strengthened IEC campaign on GeoRisk PH platforms	Introduction and orientation on GeoRisk PH Platform to Ormoc City DRRM Stakeholders and BDRRMCs	Introduction and orientation on GeoRisk PH Platform to Ormoc City DRRM Stakeholders and BDRRMCs	institutionalize and constant update of DRR Data used in GeoRisk PH Platform	CDRRMO	PHIVOLCS
All Hazards	Four (4) personnel hired	Hiring of technical personnel/capacity building on risk assessment and mapping	Two (2) hired and trained personnel for risk assessment and mapping	Two (2) hired and trained personnel for risk assessment and mapping	hired personnel for risk assessment and mapping regularized and attended with constant and up-to-date relevant trainings	CDRRMO, HRMO	OCD, PHIVOLCS, DHSUD
All Hazards	centralized database management created	Updating of database	Establishing the Database Management Team and Database Management Plan	Establishing Database Management Facilities	database is up-to-date and maximize used of recent innovative technologies	CPDO, CDRRMO	DICT, DILG
All Hazards	One cloud-based information management system for internal systems and operations	Creation of cloud-based information management system	information Management System created	Sytem maintained and updated	Sytem maintained and updated	CPDO IT-Division	DICT, Cloud storage providers
All Hazards	Four (4) personnel hired	Hiring of technical personnel/capacity building activities on Information Management	Two (2) hired and trained personnel for Information Management	Two (2) hired and trained personnel for Information Management	hired personnel for Information Management regularized and attended with constant and up-to-date relevant trainings	CDRRMO, CPDO-IT Division, HRMO	
All Hazards	Public Service Continuity Plan formulated	Formulation of Public Service Continuity Plan	Public Service Continuity Plan Formulated and active	Public Service Continuity Plan updated	Public Service Continuity Plan constantly updated	CDRRMO, HRMO	OCD
All Hazards	DRRM plan and Contingency Plans updated	Updating of City DRRM Plan and Contingency Plans	DRRM Plans updated and contingency plans for every identified hazards are formulated	Contingency Plan updated	DRRM Plans is up-to-date and contingency plans is constantly updated	CDRRMO	OCD, DILG
All Hazards	DRRM-H plan updated	Updating of DRRM-H plan	DRRM-H Plan formulated and approved by the DOH	DRRM-H plan updated	DRRM-H plan updated	CHO, CDRRMO	DOH

DISASTER PREVENTION AND MITTIGATION							
Hazard	Target	Programs, Projects and Activities (PPAs)	Output / Timeframe 2023-2025	Output / Timeframe 2026-2028	Output / Timeframe 2029-2032	Office/s Responsible	Partner Agencies
All Hazards	inventory of critical infrastructure updated	Update inventory of critical infrastructure	Inventory of critical infrastructure created and updated; appropriate retrofitting and initiatives conducted to critical infrastructures;	30 experts; 6 trained as trainer	inventory updated and all critical infrastructures are disaster-resilient	CDRRMO, CEO, GSO	
All Hazards	Training on standards and guidelines on the redesign, retrofitting or operational modifications of infrastructures conducted	Capacity Building on standards and guidelines on the redesign, retrofitting or operational modifications of infrastructures	City Engineering Office, OCArch and CDRRMO Personnel trained on the redesign, retrofitting or operational modifications of infrastructures	100 experts ; 10 trained trainer	all critical infrastructures are disaster-resilient	CDRRMO, CEO	DPWH, OCD
All Hazards	Two (2) personnel hired	Hiring of technical personnel/capacity building on Infrastructure Audit, Structural Integrity Assessment, etc.	hired and trained personnel for Infrastructure Audit, Structural Integrity Assessment, etc.	Sustaining trained personnel	Sustaining trained personnel	CDRRMO, HRDO	
All Hazards	Collaboration with NGOs and/or Professional Organizations in resilient infrastructure designs	Establish Partnership with professional organizations (UAP, PICE, ASEP) in resilient infrastructure designs	MOA signed with NGOs for resilient infrastructure designs	50 experts; 10 trained trainer	Resilient Infrastructure designs reflected in policies and systems in Ormoc City	CEO, MO, SB	DILG
At least 2 Hazards	landslide and storm surge monitoring devices procured	Procurement of landslide and storm surge monitoring devices (but DOST PAGASA will install a Coastal Camera in Ormoc City)	Landslide and storm surge monitoring devices procured			CDRRMO	
All Hazards	preventive maintenance of EWS devices procured	Provision of preventive maintenance of EWS devices	preventive maintenance of EWS devices provided to hazard-specific target barangays	preventive maintenance of EWS devices provided to hazard-specific target barangays	preventive maintenance of EWS devices provided to all barangays	CDRRMO, GSO	DILG, OCD
All Hazards	EWS devices and DRR Equipment insured	Insure EWS devices and DRR Equipment	EWS devices and DRR Equipment insured	EWS devices and DRR Equipment insurance renewed and up-to-date	EWS devices and DRR Equipment insurance renewed and up-to-date	CGSO	GSIS, Insurance providers
All Hazards	capacity building activities/trainings on EWS for CDRRMO technical personnel	Capacity building of CDRRMO technical personnel on EWS	EWS training conducted to CDRRMO Personnel	EWS training conducted to CDRRMO Personnel	EWS training conducted to CDRRMO Personnel	CDRRMO	PAGASA PHIVOLCS OCD DILG
All Hazards	all barangays trained/capacitated on community-based EWS	Capacity-building activities (protocol development, training, and simulation exercise) on community-based EWS in barangays	capacity-building activities (protocol development, training, and simulation exercise) on community-based EWS to hazard-specific target barangays	capacity-building activities (protocol development, training, and simulation exercise) on community-based EWS to hazard-specific target barangays	capacity-building activities (protocol development, training, and simulation exercise) on community-based EWS to hazard-specific target barangays	CDRRMO, LNMB	PAGASA PHIVOLCS OCD DILG
All Hazards	SOP/guidelines on EWS formulated	Institutionalization of SOP/guidelines on EWS	SOP and guidelines on EWS Formulated	SOP and guidelines on EWS rolled-out to Barangays and CDRRMC member agencies	SOP and guidelines on EWS updated and rolled-out to Barangays and CDRRMC member agencies	CDRRMO, LNMB	PAGASA PHIVOLCS OCD DILG
All Hazards	PWD-inclusive EWS established	Establish PWD-inclusive EWS	Functional PWD-inclusive EWS	EWS for all vulnerable sectors established	EWS for all vulnerable sectors established	CDRRMO, CSWDO, PIO	

DISASTER PREVENTION AND MITTIGATION							
Hazard	Target	Programs, Projects and Activities (PPAs)	Output / Timeframe 2023-2025	Output / Timeframe 2026-2028	Output / Timeframe 2029-2032	Office/s Responsible	Partner Agencies
All Hazards	monitoring mechanism for protected areas institutionalized	Strict Monitoring of protected areas	monitoring mechanism for protected areas created	monitoring mechanism for protected areas strengthened	Mechanism for protected areas institutionalized and reflected to policies and systems	ENRO	DENR
All Hazards	alternative livelihood program provided for disaster victims	Alternative livelihood options for Disaster Victims	alternative livelihood options available for Disaster Victims	alternative livelihood options available for Disaster Victims	alternative livelihood options available and expanded disaster rehabilitation program for Disaster Victims	CSWDO, PESO	
All Hazards	Business stakeholders trained/capacitated on risk financing	Conduct of IEC on risk financing in the business sector	IEC on risk financing to target business sector conducted	IEC on risk financing to target business sector conducted	IEC on risk financing all business sector stakeholders conducted	BPLO, CDRRMO	
All Hazards	National funding provided for Local DRR PPAs	Access National funding for housing units	signed partnerships with NGAs for funds access intended for housing		provided housing and settlement for target beneficiaries	MO, SB, OCHO	DILG, CCC, DPWH, DBM
All Hazards	policy crafted and program implemented on redesigning house units	Establish innovations in redesigning housing units	Capacity building conducted in exploring and training on innovations in redesigning housing units	50 experts; 10 trained trainer	Disaster-resilient housing units installed and reflected to policies	CPDO, CEO	NHA, PAG-IBIG
All Hazards	solar panels installed	Installation of solar panels	solar panels installed to target facilities and infrastructures	solar panels installed to target facilities and infrastructures	solar panels installed to all critical facilities and infrastructures	CDRRMO, CGSO, ORWASA	DPWH
At least 2 Hazards	__ e-jeepneys procured	Procurement and deployment of e-jeepneys	E-jeepneys procured		full institutionalization of the use and deployment of e-jeepneys	CDRRMO, City Traffic Office	LTFRB, DOST
At least 3 Hazards	capability building activities conducted on waste to energy technology	Waste to energy technology deployment	training on waste to energy technology deployment conducted to specific personnel	training on waste to energy technology deployment conducted to specific personnel	introduction and institutionalization of waste to energy technology to all barangays	ENRO	DENR
At least 4 Hazards	farmers provided with crop insurance	Comprehensive enlistment of farmers to crop insurance	list of target farmer beneficiaries created; provision of crop insurance to affected farmers and fisherfolks	list of target farmer beneficiaries created; provision of crop insurance to affected farmers and fisherfolks	all farmers provided with crop insurance	CDRRMO, CAO	
All Hazards	fish attracting devices constructed	Construction of fish attracting devices	constructed 6 units fish attracting devices; and training on the use of device to concerned stakeholders conducted	constructed 18 units fish attracting devices; and training on the use of device to concerned stakeholders conducted	constructed additional fish attracting devices	CAD	BFAR 8
At least 3 Hazards	Artificial Habitat established	Construction & establishment of artificial habitats	artificial habitats constructed and installed		expanding areas provided with artificial reefs	CENROcad,	
All Hazards	fish port complex constructed	Design and development of fish port complex	fish port complex constructed	Constructed and maintained 1 Fish Port Complex	maintenance of fish port complex	CEO, CAO	
Tsunami	beach forest project implemented	Beach forest project	beach forest project initiated and necessary orientation and trainings conducted	Continuing beach forest project and mangrove growing	Beach forest project completed People's organizations trained on ecotourism management	CENRO, CPDO	DENR
All Hazards	capability building activities on toilet design study	Toilet design study and implementation	capability building activities on toilet design study conducted to concerned stake holders	30 experts trained; 10 trained trainers	toilet design study results implemented and institutionalized	CPDO, CEO	
All Hazards	Slope protection technology installed	Installation of slope protection technology	slope protection technology installed	5 barangays installed slope protection and maintained	15 additional slope protection technology installed	CEO, CDRRMO	

DISASTER PREVENTION AND MITTIGATION							
Hazard	Target	Programs, Projects and Activities (PPAs)	Output / Timeframe 2023-2025	Output / Timeframe 2026-2028	Output / Timeframe 2029-2032	Office/s Responsible	Partner Agencies
All Hazards	tourist hubs constructed	Tourist hubs development	tourist hubs identified with manpower complement and required trainings	tourist hubs constructed with manpower complement and required trainings	tourist hubs constructed	TOURISM OFFICE, CEO	DOT
All Hazards	100 rainwater harvester installed	Installation of rainwater harvester	100 rainwater harvester installed	100 rainwater harvester installed including water filtration system	Public Buildings, additional rainwater harvester installed	CDRRMO, CEO	
All Hazards	City and Barangay roads, sidewalks and drainage system	Improvement of roads, sidewalks, and drainage system	roads and sidewalks paved, repaired and improved, repairs and expansion for the drainage system conducted	10,000 linear meter on roads; 6,000 linear meter on sidewalks ; 10,000 linear meter on drainage	road expansions, new roads built and opened, sidewalks repaired and maintained, and improved drainage system	CEO	DPWH
Flood	water treatment facility installed	Installation of water treatment facility			Additional water treatment facility	ORWASA, CEO, CPDO	DPWH, National & International Agencies
At least 5 Hazards	acquisition and development of lot areas for park development	Comprehensive parks development	Acquistion and lot procurement on target areas for park development		establishment of park development areas	CAD, CENRO	BFAR 8, DENR 8
At least 2 Hazards	Rehabilitated / Constructed / Installed Irrigation System	• Rehabilitation Irrigation Canals • Solar powered (SPIS) • Small Scale irrigation system (SSIP) • Pump Irrigation system for open source (PISOS) • Diversion Dam (DD)	Rehabilitated irrigation canals Installed 3 SSIP Installed 15 PISOS	Constructed and installed 7 SPIS	Constructed and Installed 3 Diversion Dams	CAO, CEO	Department of Agriculture and Bureau of Soil and Water management
All Hazards	Buffer seed stocks storage facilities constructed	· Design and development of post-harvest and buffer stock facilities	Buffer seed stocks and post-harvest storage facilities constructed	construction of storage facility		CAO, CEO	
All Hazards	Business continuity plans of MSMEs crafted	Formulation of policy granting incentives to MSMEs with BCP	Policy granting incentives to MSMEs with BCP				
All Hazards	Transformed informal economy to formal economy	Formulation of policy granting incentives to transformed informal businesses	Policy granting incentives to transformed informal businesses				
At least 2 Hazards	installation of solar streetlighting	Solar Street lightings	Decrease electric consumption cost & carbon emission	Decrease electric consumption cost & carbon emission	Decrease electric consumption cost & carbon emission	CGSO	
All Hazards	LGU-Managed Loan Facility for MSMEs	Establishment of LGU-Managed Loan Facility	LGU-Managed Loan Facility for MSMEs				
All Hazards	Standard BCP template for MSMEs in Ormoc City	Institutionalize BCP template for the MSMEs in Ormoc City	Standard BCP template for MSMEs in Ormoc City				
All Hazards	areas without/insufficient water supply	Construction of additional water sources			Accessible, available, reliable, sufficient and disaster resilient water system in Ormoc City	ORWASA, CEO, CPDO	DPWH & other National Agencies
At least 2 Hazards	Established 6 Automated Weather Station (AWS)	Procurement , establishment & installation of AWS	Real time Weather information	Calibrated AWS	Replaced AWS unit	CAD	DRRM, PAG-ASA

DISASTER PREVENTION AND MITTIGATION							
Hazard	Target	Programs, Projects and Activities (PPAs)	Output / Timeframe 2023-2025	Output / Timeframe 2026-2028	Output / Timeframe 2029-2032	Office/s Responsible	Partner Agencies
All Hazards	Identification of suitable tree species	Forest resources and species suitability study	Forest resources and species suitability study			ENRO	DENR, EDC, VSU
All Hazards	Delineation and management of watershed	Watershed characterization study	Watershed characterization study			ENRO	DENR, EDC, VSU
Flood	10 percent of denuded area as of CY2023	Reforestation to denuded areas (CBFM, TREE GROWING, ARBOR DAY, NGP, FLUP)	3 percent of denuded area as of CY2023	8 percent of denuded area as of CY2023	10 percent of denuded area as of CY2023	ENRO	DENR, EDC, VSU
Flood	10 Pos organized/capacitated for CBFM project sites	Capacity Building on People's Organization (CBFM Project sites)	3 Pos organized/capacitated for CBFM project sites	8 Pos organized/capacitated for CBFM project sites	10 Pos organized/capacitated for CBFM project sites	ENRO	DENR, EDC, VSU
Flood	10 percent of priority riparian forests	Restoration of riparian and sub watershed areas (Malbasag River, Pagsanga-an River, Haubon River	3 percent of priority riparian forests	8 percent of priority riparian forests	10 percent of priority riparian forests	ENRO	DENR, EDC, VSU
All Hazards	Identification of suitable tree species	Coastal resource and species suitability study	Coastal resource and species suitability study			ENRO with Fishery, Coastal and Aquatic Resources Management Division	DENR, BFAR, VSU
All Hazards	Management of Coastal Resources and Zone	Coastal resource management plan formulation	Coastal resource management plan			ENRO with Fishery, Coastal and Aquatic Resources Management Division	DENR, BFAR, VSU
Flood	20 percent of the restored mangrove forests in priority areas	Mangrove restoration/ expansion and protection (Macabug, San Antonio, Linao, Naungan, San Juan, Lao and other Ormoc mangrove areas.	6 percent of the restored mangrove forests in priority areas	16 percent of the restored mangrove forests in priority areas	20 percent of the restored mangrove forests in priority areas	ENRO with Fishery, Coastal and Aquatic Resources Management Division	DENR, BFAR, VSU
All Hazards	Identification of critical waste management infrastructure	Structure assessment study of Solid Waste Management Infrastructure assets	Structure assessment study of Solid Waste Management Infrastructure assets			ENRO & CEO	DPWH
All Hazards	Disaster proof Solid Waste Infrastructures	Retrofitting of Sanitary Landfill, MRFs, Waste Pick-up points	Disaster proof Solid Waste Infrastructures	Disaster proof Solid Waste Infrastructures		ENRO & CEO	DPWH
All Hazards	Purchase and installation of EWS equipment	Establishment and support for Ormoc City DRRM Operations Center Integrated Multi-hazard Early Warning System	Functional CCTV monitoring systems and hazard monitoring device/equipment in-place			CDRRMO	DOST PAGASA, DOST PHIVOLCS, MGB
All Hazards	Lot acquisition to support DRRM and CCAM initiatives	Lot Acquisition for Various DRRM Development Programs	Identification of safe and suitable lot	Identification of safe and suitable lot	Lot acquisition	CPDO	

Disaster Preparedness

Table 22. Disaster Preparedness PPAs over a 10-year timeframe

DISASTER PREPAREDNESS							
Hazard	Target	Programs, Projects and Activities (PPAs)	Output / Timeframe	Output / Timeframe	Output / Timeframe	Office/s Responsible	Partner Agencies
			2023-2025	2026-2028	2029-2032		
All Hazards	All barangays provided with inclusive and gender-sensitive DRRM IEC materials	Create inclusive and gender-sensitive DRRM IEC materials	production of gender-sensitive DRRM IEC Materials and all barangays provided		update of gender-sensitive DRRM IEC Materials; collaboration with CSOs in creating new and updated gender-sensitive DRRM IEC Materials	CDRRMO, CSWDO,IPGDO	PNP, RPO 8
All Hazards	Risk Communications Plan formulated	Formulation of Risk Communications plan	Risk Communication plan formulated and implemented		Risk Communication plan updated	CDRRMO	OCD, DICT
All Hazards	1 technical personnel hired	Hiring of technical personnel/capacity building on Risk Communications		hired personnel regularized and attended up-to-date trainings for Risk Communication		CDRRMO, HRDO	
All Hazards	1 technical personnel hired	Hiring of technical personnel/capacity building on Exercise Design	hired and trained personnel for exercise design, conducted capacity building initiatives to DRRM Stakeholders		hired personnel regularized and attended up-to-date trainings for exercise design; capacity building conducted to expanded DRRM Stakeholders	CDRRMO, HRDO,OCTO	CHO
All Hazards	85 capacity building activities conducted to all barangays	Conduct of capacity-building (plan/protocol development, drill) in barangay level (e.g. evacuation drill, flood drill, etc)	capacity building activities conducted to all barangays (15% of the total business registrant per brgy annually)	capacity building activities conducted to all barangays (15% of the total business registrant per brgy annually)	capacity building activities conducted to all barangays All newly registered businesses	BPLO,CDRRMO, LNMB	DILG
All Hazards	__ capacity building activities conducted to all barangays	Conduct of capacity-building (plan/protocol development, drill) in barangay level (e.g.evacuation drill, flood drill, etc)	capacity building activities conducted to all barangays	Capacity building activities conducted to all barangays	capacity building activities conducted to all barangays	City Health Department - HEMS, CDRRMO, BFP, Philippine Red Cross - Ormoc Chapter	DOH, CHO
All Hazards	All accredited community disaster volunteer groups (ACDV)	Basic and Advanced Life Support	ACDV roster established; relevant training provided to volunteer groups	ACDV roster established; relevant training provided to volunteer groups		CDRRMO, CHO HEMS	OCD, Red Cross, BFP
Flood	150 School DRRM Coordinators trained	Training of School DRRM Coordinators in private schools	trained school DRRM Coordinators	Continuous capacity building activities for school DRRM coordinators	additional DRRM Coordinators hired and provided with updated necessary trainings	CDRRMO, HRMO, LSB	DEPED
All Hazards	10 personnel with technical capacity to support CDRRM Office services hired	Hiring of personnel with technical capacity to support CDRRM Office services	Four (4) technical support for CDRRM Office hired and trained	Four (4) Additional Plantilla Personnel hired and trained	Two (2) Additional Plantilla Personnel hired and trained	CDRRMO, HRMO, SP	OCD, DILG
All Hazards	2 Capacity building activities conducted to all CDRRMC Members	Capacity-building to CDRRMC member agencies	DRRM Capacity Building initiatives conducted to CDRRMC Members	DRRM Capacity Building initiatives conducted to CDRRMC Members	DRRM Capacity Building initiatives conducted to expanded CDRRMC Members and DRRM Stakeholders	CDRRMO	OCD ; DILG
All Hazards	911 Emergency Dispatch System established	Establish 911 Emergency Dispatch System	Emergency Dispatch System established	Operational Emergency Dispatch System maintained and institutionalized	Operational Emergency Dispatch System maintained and institutionalized	CDRRMO, City I.T. Office	OCD; DICT

DISASTER PREPAREDNESS							
Hazard	Target	Programs, Projects and Activities (PPAs)	Output / Timeframe 2023-2025	Output / Timeframe 2026-2028	Output / Timeframe 2029-2032	Office/s Responsible	Partner Agencies
All Hazards	Operations Center SOP/Manual created	Formulation of Operations Center SOP/Manual	Operations Center SOP/Manual formulated and institutionalized	Operations Center SOP/Manual rolled-out to BDRRMCs and updated	Operations Center SOP/Manual rolled-out to BDRRMCs and updated	CDRRMO	OCD
All Hazards	Leyte DRRMCs Telecommunications and Response Network institutionalized	Institutionalization of interoperability with DRRMOs in Leyte Province (Leyte DRRMCs Telecommunications and Response Network)	Collaboration thru MOA/Federation among LDRRMOs in Leyte Province established	Collaboration thru MOA/Federation among LDRRMOs in Leyte Province maintained and expanded membership	Collaboration thru MOA/Federation among LDRRMOs in Leyte Province maintained and expanded membership	CDRRMO, CMO	Leyte Province DRRMO
All Hazards	DRRM Protocol between the City and Barangays	Institutionalization of Coordination mechanism/protocols between city and barangays	DRRM Coordination Protocols for the City and Barangay OpCen institionalized	DRRM Protocol between the City and Barangays institutionalized and implemented	DRRM Protocol between the City and Barangays institutionalized and updated	CDRRMO	LIGA ng Mga Barangay, DILG
All Hazards	Collaboration with Volunteer Groups and other NGOs	Institutionalize ACDV roster and accreditation	ACDV roster established; relevant training provided to volunteer groups	ACDV roster updated; relevant training provided to volunteer groups	ACDV roster expanded; relevant and updated training provided	CDRRMO	OCD ; DILG
All Hazards	Contingency Plans updated	Contingency plans updating	Contingency Plans for various hazards updated	Contingency Plans for various hazards tested and updated	Contingency Plans for various hazards tested and updated	CDRRMO	OCD ; DILG
All Hazards	Contingency Plans for All Hazards formulated	Formulation of contingency plans for other hazards	Contingency Plans for various hazards formulated	Contingency Plans for various hazards tested and updated	Contingency Plans for various hazards tested and updated	CDRRMO	OCD
All Hazards	Public Service Continuity Plan created	Formulation of Public Service Continuity Plan	Public Service Continuity Plan formulated and implemented	Public Service Continuity Plan formulated and implemented		CDRRMO, BPLO, CPDO	OCD ; DTI
All Hazards	Orientation and Training on Operation Listo Manual conducted to CDRRMC Members and All Barangays	Institutionalized protocols/guidelines in Operation Listo Manual	Orientation and Training on Operation Listo Manual conducted to CDRRMC Members and All Barangays	Orientation and Training on Operation Listo Manual conducted to CDRRMC Members and All Barangays	Orientation and Training on Operation Listo Manual conducted to DRRM Stakeholders, Schools and CSOs	CDRRMO	DILG
All Hazards	one City Disaster Response Plan created	Institutionalization of response clusters and protocols/guidelines	Skills & Enhancement Training for quick response during calamities	Capacity building activities conducted to all barangays		CDRRMO, LIGA	
All Hazards	Two (2) Training of trainers conducted	Establish pool of trainers	Pool of trainers established and provided with relevant DRRM Trainings		Pool of trainers expanded and provided with relevant and up-to-date DRRM Trainings	CDRRMO	PDRF, EDC
All Hazards	Annual Training of trainers conducted for BLS	Establish pool of trainers	Availability of local trainers/cadres	Pool of trainers established and provided with relevant DRRM Trainings		City Health Department - HEMS, CDRRMO	DOH
All Hazards	100 personnel completed all levels of ICS Training	Capacity Building on ICS to develop local Trainors/Cadres	CDRRMC Members provided with trainings of all ICS Levels	Capacitated CDRRMC Members on the Incident Management System method	DRRM Stakeholders and Barangay Officials provided with trainings of all ICS Levels	CDRRMO	OCD
All Hazards	DRRM Training Facility constructed	Construction of Training facility to sustain continuous DRRM training activities	DRRM Training Facility constructed	Constructed 1 DRRM Facility	DRRM Training Facility maintained	CDRRMO, CEO	CEO, DPWH, OCD
All Hazards	DRRM Training Modules formulated	Standardization of training modules	DRRM Training Modules formulated and implemented			DRRMO	OCD, DILG

DISASTER PREPAREDNESS							
Hazard	Target	Programs, Projects and Activities (PPAs)	Output / Timeframe 2023-2025	Output / Timeframe 2026-2028	Output / Timeframe 2029-2032	Office/s Responsible	Partner Agencies
All Hazards	CDRRMO Inventory system digitized	Establish a digitalized inventory system	CDRRMO Inventory system digitized	CDRRMO Inventory system digitized	CDRRMO Digital Inventory system maitained and updated	CDRRMO, GSO, ITO	
All Hazards	Seven (7) storage facilities established for pre-positioning of relief goods and response equipment	Construct additional storage facilities	7 storage facilities established	7 Storage Facilities constructed	3 additional storage facilities established	CEO, DSWD	
All Hazards	One (1) technical personnel hired for PMS and Inventory	Hiring/Designation of technical personnel performing preventive maintenance, supply and inventory management, and equipment handling, to ensure resource readiness. Engineer II (Maintenance Engr.)	hired and trained technical personnel performing preventive maintenance, supply and inventory management, and equipment handling	Preventive maintenance, supply and inventory management and equipment handling	Preventive maintenance, supply and inventory management and equipment handling	GSO, HRMO' City Accounting Office	
All Hazards	One (1) personnel appointed	· Filling up of a regular position for office property custodian	hired personnel for the position in the office property custodian	Duties and responsibilities of an Office Property Custodian	Duties and responsibilities of an Office Property Custodian	GSO, HRDO	
All Hazards	Updated stockpile inventory	· Improve Inventory system on stockpile	stockpile inventory updated	stockpile inventory updated	stockpile inventory maintained and constantly updated	CDRRMO, GSO	
All Hazards	all identified evacuation centers complied with DSWD Standards	· Standardization of resilient design for evacuation centers	all identified evacuation centers upgraded to conform with DSWD Standards		additional identified evacuation centers compliant with DSWD Standards	CDRRMO, CSWDO	OCD DSWD
Alteast 3 Hazards	Database management on Evacuation Centers established	Establish database management on Evacuation Centers (e.g. assigning Evac Center IDs, geotagging, etc)	Database management on Evacuation Centers established	Database management on Evacuation Centers updated	Database management on Evacuation Centers maintained and updated	CDRRMO, CSWDO, CEO	OCD DSWD
All Hazards	Al identified evacuation centers retrofitted	Retrofitting of current evacuation centers (open covered courts are used	30 target evacuation centers retroffitted	30 Evacuation Centers retrofitted	all evacuation centers are disaster resilient	CDRRMO, CEO	DPWH
All Hazards	Response Cluster Member Agencies trained on Management of the Dead and Missing Persons	Training for MDM	Trained and capacitated Members of the City MDM Team		PWD-sensitive directional signages installed in all barangays	CDRRMO, CSWDO	
All Hazards	CSWD, DRRMO and other Stakeholders trained on evacuation center planning and Camp Coordination and Camp Management (CCCM)	Institutionalize and standardized evacuation center planning and management	CDRRMC members trained on Camp Management and other relevant Trainings on evacuation center planning			CDRRMO, CHO HEMS	DILG ; OCD
Flood	IEC on solid waste management conducted to all barangays	Information and education campaigns on solid waste management	IEC materials on solid waste management produced and capacity building initiatives conducted to all barangays	IEC materials on solid waste management produced and capacity building initiatives conducted to all barangays	IEC materials on solid waste management updated	CENRO	

DISASTER PREPAREDNESS							
Hazard	Target	Programs, Projects and Activities (PPAs)	Output / Timeframe 2023-2025	Output / Timeframe 2026-2028	Output / Timeframe 2029-2032	Office/s Responsible	Partner Agencies
All Hazards	Community-based surveillance and monitoring of diseases institutionalized	Community-based surveillance and monitoring of diseases	Community-based surveillance and monitoring of diseases mechanism formulated and implemented	-	-	CHO	DOH
All Hazards	Biodiversity assessment conducted	Biodiversity assessment	Biodiversity assessment conducted	results from the Biodiversity assessment conducted reflected to policy and program identification for the update of relevant local plans		CENRO	
Flood	capability building activities on hydrology and linkage with science-based agencies conducted	Comprehensive hydrology study	capability building activities on hydrology conducted; linkage with science-based agencies established thru MOA/MOU	capability building activities on hydrology conducted; linkage with science-based agencies established thru MOA/MOU	capability building activities on hydrology conducted to DRRM Stakeholders; expanded linkage with science-based agencies established thru MOA/MOU	CDRRMO, CPDO	DENR
All Hazards	Forest Land Use Plan formulated	Updating of Forest Land Use Plan	FLUP Updated	Updated Forest Land Use Plan		CPDO, ENRO	DENR
All Hazards	Drainage and Sewerage Master Plan formulated	Formulation on Drainage and Sewerage Master Plan	Drainage and Sewerage Master Plan formulated	Formulated drainage and sewage master plan to the entire Ormoc	Drainage and Sewerage Master Plan updated	CPDO, CEO	
At least3 Hazards	capability building activities on climate smart agriculture	Conducts of Season Long Training on Climate Smart Agriculture	6 Climate Smart-FFS per year to target beneficiaries			CDRRMO,CAD	DA, ATI
At least3 Hazards	600 fisherfolks provided with fingerlings	Increased production of freshwater fingerlings from 60,000 pcs to 200,000 pcs	distributed fingerlings to 600 backyard freshwater pond operators	6 ponds repaired and concreted. Improve water system, procured materials)	all indigent fisherfolks provided with fingerlings	CAD	BFAR 8
All Hazards	MSMEs and farmer organization	Training for alternative livelihood	-training of alternative livelihood for identified trainers and stakeholders; conduct of alternative livelihood training to target barangay beneficiaries	-training of alternative livelihood for identified trainers and stakeholders; conduct of alternative livelihood training to target barangay beneficiaries	-training of alternative livelihood for identified trainers and stakeholders; conduct of alternative livelihood training to target barangay beneficiaries	CSWDO, PESO	TESDA
All Hazards	Established MSME information system redundancy	MSME Information system redundancy	Established MSME information system redundancy			CPDO	DICT, DTI, Local Chamber
All Hazards	Improved business environment	Enhancement of Business and Building Permitting System	Enhanced Electronic Business and Building Permitting system			CPDO	DICT
All Hazards	Purchase of additional emergency/disaster equipment and supplies	Purchase of Emergency/Disaster Equipment and Supplies	Acquisition of DRR equipment and supplies	Acquisition of DRR equipment and supplies for the DRRM Rescue Team	Acquisition of DRR equipment and supplies	CDRRMO	OCD
All Hazards	Purchase of additional emergency/disaster transportation and construction/heavy equipment to support logistic services of the City DRRM Operations Center	Purchase of Emergency/Disaster Transportation Equipment and Construction/Heavy Equipment	Acquisition of various transportation equipment and/or construction & heavy equipment				

DISASTER PREPAREDNESS							
Hazard	Target	Programs, Projects and Activities (PPAs)	Output / Timeframe 2023-2025	Output / Timeframe 2026-2028	Output / Timeframe 2029-2032	Office/s Responsible	Partner Agencies
All Hazards	Emergency/Disaster Responders provided with insurance and other benefits	ACDV/Responder Care Program	Provision of insurance and needed resources to ACDVs and other emergency/disaster responders	Provision of insurance and needed resources to ACDVs and other emergency/disaster responders	Provision of insurance and needed resources to ACDVs and other emergency/disaster responders	CDRRMO	GSIS
All Hazards	Maintain and sustain services of the Ormoc City DRRM Operations Center	Ormoc City DRRM Operations Center Program	Maintain and sustain services of the Ormoc City DRRM Operations Center	Maintain and sustain services of the Ormoc City DRRM Operations Center	Maintain and sustain services of the Ormoc City DRRM Operations Center	CDRRMO	OCD
All Hazards	Available stockpile of FNFI for sudden emergencies and in case of imminent threat	Purchase of FNFI in case of sudden emergencies and for prepositioning in case of imminent threat	Available stockpile of FNFI for sudden emergencies and in case of imminent threat	Available stockpile of FNFI for sudden emergencies and in case of imminent threat	Available stockpile of FNFI for sudden emergencies and in case of imminent threat	CSWD	DSWD
All Hazards	capacity-building activities on Resilient Housing and Human Settlements conducted	Establish capacity-building activities on Resilient Housing and Human Settlements	Resilient Housing and Human Settlements Training conducted for DRRMC Members and stakeholders		Community-based Resilient Housing and Human Settlements Capacity Building activities conducted	CPDO, CDRRMO	DHSUD, UN Habitat
At least4 Hazards	Agri-Fishery Baseline data established and updated	Established and updated baseline data	Validate and Established Agri-fishery data system : Barangay-based and City wide Based	Managed and Updated IT based Agri-Fishery Data		City Agriculture Department, City Planning Office, IT	Department of Agriculture, NIA, PCA, SRA, PhilFIDA
All Hazards	C/BDRRMC Members and stakeholders trained on ICS	Capacity-building of CDRRMO personnel, CDRRMC members, BDRRMC members and other stakeholders on ICS	CDRRMC Members are trained in at most 2 levels of ICS	440 Members are trained on ICS Levels 1 & 2	BDRRMCs and DRRM Stakeholders trained in all levels of ICS	CDRRMO, ENRO, CMO, CITY HEALTH	OCD, NDRRMC, DILG
At least 4 Hazards	IMT organized and members trained	Institutionalize IMT	EO created for IMT, IMT Members trained	Additional number of members trained on IMT	Expanded membership of IMT with up-to-date and relevant trainings	CDRRMO	OCD
All Hazards	440 personnel completed all levels of ICS Training	Capacity Building on ICS for more local cadres	target LGU Personnel trained in all levels of ICS	Safety Officers per Offices are tarined on ICS	Local DRRM Stakeholders trained in all levels of ICS	CDRRMO	OCD
All Hazards	Orientation and Training on Operation Listo Manual conducted to CDRRMC Members and All Barangays	Institutionalize protocols/guidelines in Operation Listo Manual	CDRRMC Members and BDRRMCs trained on Operation Listo	Application of training modules to CDRRMC and BDRRMCs trained on Operation Listo		CDRRMO, LNMB	DILG
All Hazards	10 MOA/MOU with telecommunications companies	MOA with telecommunications companies on telco restoration	signed MOA/MOU with identified partner Telco companies	Number of MOA signed in partnership with LGU and Governing Bodies Revisit MOA semi-annually Renewal of MOA/MOU to identified Telco Companies	renewed MOA/MOU with identified partner Telco companies	CDRRMO, MO, SB	DICT
All Hazards	5 MOA/MOU with construction firms	MOA with construction firms on debris clearing operations	signed MOA/MOU with identified partner Construction firms			CEO, MO, SB	

DISASTER PREPAREDNESS							
Hazard	Target	Programs, Projects and Activities (PPAs)	Output / Timeframe 2023-2025	Output / Timeframe 2026-2028	Output / Timeframe 2029-2032	Office/s Responsible	Partner Agencies
Alteast 3 Hazards	Digital relief operations system established	Digitalization of relief operations system	relief operations system digitized; training on the use of system to target personnel			CDRRMO, ITO	
All Hazards	3 capacity building activities conducted to all barangays	Community-Based DRRM capacity-building (evacuation planning and evacuation drills) in the barangay level	Community-based DRRM Capacity building to target hazard-specific barangays conducted	Community-based DRRM Capacity building to target hazard-specific barangays conducted	Community-based DRRM Capacity building to all barangays conducted	CDRRMO, LNMB	
All Hazards	All CDRRMC Members trained on RDANA	Institutionalization of RDANA	all CDRRMC Members trained on RDANA		all CDRRMC Members and other DRRM Stakeholders retrained on RDANA	CDRRMO, CPDO, CEO	OCD
All Hazards	Yearly RDANA Trainings conducted and rolled out to all barangays	Capacity-building activities (training) on RDANA in order to create local RDANA teams	BDRRMCs trained on RDANA		all BDRRMC Members and other DRRM Stakeholders retrained on RDANA	CDRRMO, LNMB	OCD
All Hazards	capacity building activities on PFA and other MHPS services conducted	Capacity building activities on PFA and other MHPS services	target personnel trained on PFA and MHPS		target barangay personnel trained on PFA and MHPS	CSWDO, CHO	DOH
All Hazards	PFA and other MHPSS Training Modules created	Standardized training module on PFA and other MHPSS	PFA and other MHPSS Training Modules created and rolled out		PFA and other MHPSS Training Modules standardized	CSWDO, CHO	DOH, CSWDO, CHO
All Hazards	Database management on Evacuation Centers established	Establish system on updating the inventory of evacuation centers	Database management on Evacuation Centers established		Database management on Evacuation Centers constantly updated	CDRRMO, CSWDO	
At least 3 Hazards	__ MOA/MOU with private companies	MOA with private establishments as alternate evacuation centers	signed MOA/MOU with partner private companies		renewed MOA/MOU with partner private companies	CDRRMO, MO, SB	
All Hazards	1 Digitized IDP registration	Digitalization of IDP registration	Digitized IDP registration institutionalized	All Barangays are trained on Digitalization of IDP Registration	Digitized IDP registration maintained	IT, CMO, LIGA, IPGDO, CYDO/SK	DICT
All Hazards	all barangays trained on CCCM	Capacity building on CCCM at the barangay level	all barangays trained on CCCM	training of CCCM for barangays	CCCM training provided to all DRRM Stakeholders	CSWDO, LNMB	DSWD
All Hazards	CCCM Module created	Standardized training module on CCCM	CCCM Module formulated and implemented		CCCM Module updated	CSWDO, LNMB	DSWD
All Hazards	Organized HEMS and ESU	Institutionalization of Health Emergency Management System (HEMS) and Epidemiological Surveillance Unit (ESU) organizational structure	Ordinance creating the HEMS and ESU passed; hiring and training for HEMS and ESU Personnel conducted		HEMS and ESU Offices institutionalized and personnel provided with relevant trainings	CHO, DOH	DOH
All Hazards	Contingency Plan for MEID formulated	Formulation of Contingency plan for Emerging Infectious Disease	Contingency Plan for MEID formulated		Contingency Plan for MEID updated	CDRRMO, CHO	OCD, DOH

Disaster Response and Early Recovery

Table 23. Disaster Response and Early Recovery PPAs over a 10-year time frame

DISASTER RESPONSE AND EARLY RECOVERY							
Hazard	Target	Programs, Projects and Activities (PPAs)	Output / Timeframe	Output / Timeframe	Output / Timeframe	Office/s Responsible	Partner Agencies
			2023-2025	2026-2028	2029-2032		
All Hazards	DRRM Reporting templates standardized and rolled out	Standardized DRRM reporting templates	Institutionalization of Operation Listo; training of target Offices on Reporting Templates and Mechanism	90 Personnel to undergp Re-orientation on the Standard Reporting of DRRM Template and Mechanism	Maintenance and update of the DRRM Reporting and Monitoring Mechanism	CDRRMO, CMO, PAIAO, IPGDO, CPDO	OCD, DILG
All Hazards	Standard Disaster Reporting established	Institutionalized guidelines/protocol on information gathering, reporting, and dissemination	Disaster Reporting guidelines and protocols crafted. Orientation on guidelines provided to target offices and personnel	Technical Working Group established. Safety Officers oriented on Disaster Reporting Guidelines and Protocols	Disaster Reporting guidelines and protocols updated. Orientation on guidelines provided to target offices and personnel	CDRRMO, CMO, IT Division, HR, Admin	OCD, DILG
All Hazards	Restoration practices and protocol established	Institutionalization of restoration practices	Restoration practices protocol crafted and orientation to CDRRMC members		Restoration practices protocol institutionalized	CDRRMO	NEDA, OCD
All Hazards	DRRM Baseline data established and updated	Updated baseline data	DRRM Baseline data established and updated		DRRM Baseline data constantly updated	CDRRMO, CPDO	
All Hazards	All identified evacuation centers retrofitted	30 evacuation centers to be redesigned/retroffited	30 target evacuation centers retroffitted	30 Evacuation Centers retrofitted	All evacuation centers are disaster resilient	CEO	

Disaster Recovery and Rehabilitation

Table 24. Disaster Recovery and Rehabilitation PPAs overa 10 year time frame

DISASTER RECOVERY & REHABILITATION							
Hazard	Target	Programs, Projects and Activities (PPAs)	Output / Timeframe	Output / Timeframe	Output / Timeframe	Office/s Responsible	Partner Agencies
			2023-2025	2026-2028	2029-2032		
All Hazards	Capacitated LGU Technical personnel	Training of PDNA	5 PDNA Technical personnel hired	Capacitated hired PDNA personnel	Additional hired personnel and trained for PDNA	CDRRMO	OCD, NEDA
All Hazards	Disaster Recovery and Rehabilitation Plan crafted	Formulation of Disaster Recovery and Rehabilitation Plan	Disaster Recovery and Rehabilitation Plan formulated		Disaster Recovery and Rehabilitation Plan revisited and updated	CDRRMO	NEDA, OCD, PHILVOLCS
All Hazards	Buffer seed stocks and storage facilities constructed	Establish buffer seed stocks and storage facilities	POW and FS prepared			CAO, CEO	Visayas State University
All Hazards	Buffer seed stocks and storage facilities constructed	Establish buffer seed stocks and storage facilities	Storage facilities constructed			CAO, CEO	
All Hazards	Buffer seed stocks and storage facilities constructed	Establish buffer seed stocks and storage facilities	Seeds procured and distributed			CAO, CEO	
All Hazards	Lot acquisition for housing	LGU funded housing program	Coordination with appropriate NGAs for lot acquisition thru MOA/MOU; paperwork's and legal processes made for the lot acquisition	provision of housing to underprivileged and target beneficiaries		CDRRMO, CPDO, CLO, OCHO	NHA, PAG-IBIG, SHFC
All Hazards	PDNA Training conducted to C/BDRRMC Members	Capacity building on PDNA	PDNA Training conducted to C/BDRRMC Members	PDNA Training conducted to C/BDRRMC Members	PDNA Training conducted to expanded DRRM Stakeholders and Barangay Officials	CDRRMO	OCD
All Hazards	MSME Acess to finance	MSME Loan Programs	Operational LGU managed loan program	Operational LGU managed loan program	Operational LGU managed loan program	BPLO	SB CORP, financial institutions
All Hazards	Solid Waste Management Program (post-disaster waste management)	Conduct clearing operation and clean-up Procurement of waste collection vehicle (dump truck with boom)	Conduct clearing operation and clean-up, Procurement of waste collection vehicle (dump truck with boom)	Solid Waste Management Program (post-disaster waste management)		ENRO	

CHAPTER 4: LOCAL DRRM FUND INVESTMENT PLAN / SUPPLEMENTAL INVESTMENT PROGRAM FOR THE SPECIAL TRUST FUND

LOCAL DISASTER RISK REDUCTION AND MANAGEMENT FUND INVESTMENT PLAN (LDRRMFIP)

As provided in the previous chapters, it has been established that the City of Ormoc is exposed to certain hazards and risks. Taking in this fact, the City of Ormoc aims to provide more DRRM PPAs that would strengthen their adaptive capacities which would consequently lower their vulnerability and risks to these hazards.

In compliance to the DRRM Act of 2010 which provides the guidance of providing funds for DRRM PPAs, the City of Ormoc has allocated funds for this purpose mainly to:

- Provides immediate support: where it can provide immediate support to communities affected by disasters. This can include emergency response, relief operations, and early recovery activities.
- Promote preparedness: the PPAs are to support preparedness activities such as risk assessments, contingency planning, and training. This can help communities better anticipate and respond to potential disasters.
- Enhance resilience: with the city's emphasis in materializing its goal of becoming a resilient city, it emphasizes strengthening infrastructure, improving early warning systems, and investing in disaster risk reduction measures where communities can better withstand and recover from disasters.
- Increase coordination: the plan provides PPAs that can help facilitate coordination between different government agencies, private organizations, and community groups. This can help ensure that resources are deployed effectively and efficiently during disasters.
- Enable sustainable development: Investing in disaster risk reduction and management can also support sustainable development. By reducing the risk of disasters, communities can better protect their assets, promote economic growth, and build a safer and more sustainable future

LDRRMFIP Budget Summary by Major Program Classification in 000,000 PhP

Table 25. LDRRMFIP Budget Summary by Major Program Classification (000,000 PhP)

MAJOR PROGRAM CLASSIFICATION	2023	2024	2025	ST SUB TOTAL	MT SUB TOTAL	LT SUB TOTAL	GRAND TOTAL	PERCENT TO TOTAL
Science-based	12	29	15	56	10	113	180	1%
Institutionalization	29	69	41	140	92	106	338	2%
Social Preparation	27	33	53	114	12	41	166	1%
Capacity Building	90	44	48	181	120	145	447	3%
Specialized Course	2	2	2	6	6	0	12	0%
Training Institute	2	2	2	7	5	1	13	0%
Technology Transfer	1	3	8	13	33	45	90	1%
Pre-construction	63	153	179	395	214	1,027	1,636	11%
Construction	440	479	511	1,430	1,695	8,523	11,648	80%
Post Construction	6	7	14	27	27	45	100	1%
Review and Updating	0	0	0	0	0	0	0	0%
TOTAL	**672**	**823**	**874**	**2,369**	**2,215**	**10,046**	**14,630**	**100%**

It is good to note that more than a majority (92%) of the funding requirement is for construction.

Infrastructure investment is critical for building resilience in the City of Ormoc. In order to be resilient, the city has to have the ability to withstand, adapt to, and recover from natural and human-made disasters. Investing in infrastructure can help the city prepare for and mitigate the impact of disasters, as well as promote sustainable development and economic growth.

Here is the list of I**NFRASTRUCTURE-RELATED PPAs** included in this plan:

- Update inventory of critical infrastructure
- Capacity Building on standards and guidelines on the redesign, retrofitting or operational modifications of infrastructures
- Establish innovations in redesigning housing units
- Design and development of fish port complex
- Toilet design study and implementation
- Installation of slope protection technology
- Tourist hubs development
- Installation of rainwater harvester
- Lot Acquisition for Various DRRM Development Programs
- Construction of Training facility to sustain continuous DRRM training activities
- Establish a digitalized inventory system
- MOA with construction firms on debris clearing operations
- Retrofitting of current evacuation centers (open covered courts are used
- Establish PWD-inclusive EWS
- Installation of solar panels
- Construction of fish attracting devices
- Construction & establishment of artificial habitats
- beach forest project
- Improvement of roads, sidewalks, and drainage system
- Comprehensive parks development
- Rehabilitation Irrigation Canals
- Solar powered (SPIS)
- Small Scale irrigation system (SSIP)
- Pump Irrigation system for open source (PISOS)
- Diversion Dam (DD)"
- Design and development of post-harvest and buffer stock facilities
- Solar Streetlightings
- Construction of additional water sources
- Procurement , establishment & installation of AWS
- Construct additional storage facilities
- Formulation on Drainage and Sewerage Master Plan
- Establish buffer seed stocks and storage facilities

LDRRMFIP Budget Summary by PPA Sector and its Outcome in 000,000 PhP

Table 26. LDRRMFIP Budget Summary by PPA Sector and its Outcomes (000,000 PHP)

MAJOR PROGRAM CLASSIFICATION	2023	2024	2025	ST SUB TOTAL	MT SUB TOTAL	LT SUB TOTAL	GRAND TOTAL	PERCENT TO TOTAL
Livelihood and Business Development: Income Security	7	34	20	60	40	45	145	1%
Fisheries: Food and Water	0	8	15	23	5	5	33	0%
Resilient Housing	25	30	50	106	0	20	126	1%
Protection	22	25	26	74	63	71	208	1%
Digital Governance	546	669	712	1,927	1,973	3,731	7,630	52%
All Sectors	72	57	51	180	134	6,174	6,487	44%
TOTAL	**672**	**823**	**874**	**2,369**	**2,215**	**10,046**	**14,630**	**100%**

A little over half (52%) of the funding requirement is for digital governance (infrastructure) and almost half (44%) of the funding requirement cuts across all sectors. This only reinforced the city's commitment to DRR where it is reflected in all aspects of governance. The City of Ormoc, has well reflected in all of its existing sectoral plans to have been provided with a DRR lens. Where the concerns and issues of DRRM are not isolated but cross cuts across all other sectors.

LDRRMFIP Budget Summary by PPA Timelines in 000,000 PhP

Table 27. LDRRMFIP Budget Summary by PPA Timelines (000,000 PhP)

MAJOR PROGRAM CLASSIFICATION	2023	2024	2025	ST SUB TOTAL	MT SUB TOTAL	LT SUB TOTAL	GRAND TOTAL	PERCENT TO TOTAL
Short-Term (1-3 Years)	70	63	45	179	55	76	310	2%
Medium-Term (4-6 Years)	145	142	124	124	91	141	643	4%
Long-Term (7-10 Years)	456	618	705	705	2,069	9,829	13,667	93%
TOTAL	**672**	**823**	**874**	**2,369**	**2,215**	**10,046**	**14,630**	**100%**

As provided in the table above, it can be seen that in order to materialize this plan, the City of Ormoc needs around 14 Billion Pesos. The allocation of this plan is heavily leaned on infrastructure which aligns to its vision of becoming a resilient city. For its first three years, it will focus more on strengthening capacities of its organization and community then eventually on the plans medium-term and long-term PPAs are where the infrastructure comes in.

BUDGET SUMMARY FOR THE FIRST TERM:

Table 28. Budget Summary for the First Term

DISASTER PREVENTION AND MITTIGATION							
Hazard	Target	Programs, Projects and Activities (PPAs)	Output / Timeframe	Output / Timeframe	Output / Timeframe	Office/s Responsible	Partner Agencies
			2023-2025	2026-2028	2029-2032		
All Hazards	Climate and Disaster Risk Information updated and integrated into plans and policies	Climate and Disaster Risk Information Database Management	CDRA database updated following the AR6 of DHSUD Adoption and Utilization of GeoRisk PH Platform	CDRA database updated following the AR6 of DHSUD Adoption and Utilization of GeoRisk PH Platform	CDRA database updated following the AR6 of DHSUD Adoption and Utilization of GeoRisk PH Platform	CPDO, CDRRMO	DHSUD, DILG, PHIVOLCS, PAGASA, DENR-MGB
All Hazards	Risk assessment for Geologic and other hazards created	Formulation of risk assessment for Geologic and other hazards	Risk Assessment for every identified hazard formulated and is used as bases in the update and formulation of DRR-Based plans (LCCAP, DRRMP, LDIP, CCET-AIP)		updated Risk Assessment for every identified hazard	CPDO, CDRRMO	PHIVOLCS, PAG-ASA, DENR-MGB
All Hazards	IEC Campaign on GeoRisk PH conducted to all barangays	Strengthened IEC campaign on GeoRisk PH platforms	Introduction and orientation on GeoRisk PH Platform to Ormoc City DRRM Stakeholders and BDRRMCs	Introduction and orientation on GeoRisk PH Platform to Ormoc City DRRM Stakeholders and BDRRMCs	institutionalize and constant update of DRR Data used in GeoRisk PH Platform	CDRRMO	PHIVOLCS
All Hazards	Four (4) personnel hired	Hiring of technical personnel/capacity building on risk assessment and mapping	Two (2) hired and trained personnel for risk assessment and mapping	Two (2) hired and trained personnel for risk assessment and mapping	hired personnel for risk assessment and mapping regularized and attended with constant and up-to-date relevant trainings	CDRRMO, HRMO	OCD, PHIVOLCS, DHSUD
All Hazards	centralized database management created	Updating of database	Establishing the Database Management Team and Database Management Plan	Establishing Database Management Facilities	database is up-to-date and maximize used of recent innovative technologies	CPDO, CDRRMO	DICT, DILG
All Hazards	One cloud-based information management system for internal systems and operations	Creation of cloud-based information management system	information Management System created	Sytem maintained and updated	Sytem maintained and updated	CPDO IT-Division	DICT, Cloud storage providers
All Hazards	Four (4) personnel hired	Hiring of technical personnel/capacity building activities on Information Management	Two (2) hired and trained personnel for Information Management	Two (2) hired and trained personnel for Information Management	hired personnel for Information Management regularized and attended with constant and up-to-date relevant trainings	CDRRMO, CPDO-IT Division, HRMO	
All Hazards	Public Service Continuity Plan formulated	Formulation of Public Service Continuity Plan	Public Service Continuity Plan Formulated and active	Public Service Continuity Plan updated	Public Service Continuity Plan constantly updated	CDRRMO, HRMO	OCD
All Hazards	DRRM plan and Contingency Plans updated	Updating of City DRRM Plan and Contingency Plans	DRRM Plans updated and contingency plans for every identified hazards are formulated	Contingency Plan updated	DRRM Plans is up-to-date and contingency plans is constantly updated	CDRRMO	OCD, DILG
All Hazards	DRRM-H plan updated	Updating of DRRM-H plan	DRRM-H Plan formulated and approved by the DOH	DRRM-H plan updated	DRRM-H plan updated	CHO, CDRRMO	DOH
All Hazards	inventory of critical infrastructure updated	Update inventory of critical infrastructure	Inventory of critical infrastructure created and updated; appropriate retrofitting and initiatives conducted to critical infrastructures;	30 experts; 6 trained as trainer	inventory updated and all critical infrastructures are disaster-resilient	CDRRMO, CEO, GSO	

DISASTER PREVENTION AND MITTIGATION							
Hazard	Target	Programs, Projects and Activities (PPAs)	Output / Timeframe 2023-2025	Output / Timeframe 2026-2028	Output / Timeframe 2029-2032	Office/s Responsible	Partner Agencies
All Hazards	Training on standards and guidelines on the redesign, retrofitting or operational modifications of infrastructures conducted	Capacity Building on standards and guidelines on the redesign, retrofitting or operational modifications of infrastructures	City Engineering Office, OCArch and CDRRMO Personnel trained on the redesign, retrofitting or operational modifications of infrastructures	100 experts ; 10 trained trainer	all critical infrastructures are disaster-resilient	CDRRMO, CEO	DPWH, OCD
All Hazards	Two (2) personnel hired	Hiring of technical personnel/capacity building on Infrastructure Audit, Structural Integrity Assessment, etc.	hired and trained personnel for Infrastructure Audit, Structural Integrity Assessment, etc.	Sustaining trained personnel	Sustaining trained personnel	CDRRMO, HRDO	
All Hazards	Collaboration with NGOs and/or Professional Organizations in resilient infrastructure designs	Establish Partnership with professional organizations (UAP, PICE, ASEP) in resilient infrastructure designs	MOA signed with NGOs for resilient infrastructure designs	50 experts; 10 trained trainer	Resilient Infrastructure designs reflected in policies and systems in Ormoc City	CEO, MO, SB	DILG
At least 2 Hazards	landslide and storm surge monitoring devices procured	Procurement of landslide and storm surge monitoring devices (but DOST PAGASA will install a Coastal Camera in Ormoc City)	Landslide and storm surge monitoring devices procured			CDRRMO	
All Hazards	preventive maintenance of EWS devices procured	Provision of preventive maintenance of EWS devices	preventive maintenance of EWS devices provided to hazard-specific target barangays	preventive maintenance of EWS devices provided to hazard-specific target barangays	preventive maintenance of EWS devices provided to all barangays	CDRRMO, GSO	DILG, OCD
All Hazards	EWS devices and DRR Equipment insured	Insure EWS devices and DRR Equipment	EWS devices and DRR Equipment insured	EWS devices and DRR Equipment insurance renewed and up-to-date	EWS devices and DRR Equipment insurance renewed and up-to-date	CGSO	GSIS, Insurance providers
All Hazards	capacity building activities/trainings on EWS for CDRRMO technical personnel	Capacity building of CDRRMO technical personnel on EWS	EWS training conducted to CDRRMO Personnel	EWS training conducted to CDRRMO Personnel	EWS training conducted to CDRRMO Personnel	CDRRMO	PAGASA PHIVOLCS OCD DILG
All Hazards	all barangays trained/capacitated on community-based EWS	Capacity-building activities (protocol development, training, and simulation exercise) on community-based EWS in barangays	capacity-building activities (protocol development, training, and simulation exercise) on community-based EWS to hazard-specific target barangays	capacity-building activities (protocol development, training, and simulation exercise) on community-based EWS to hazard-specific target barangays	capacity-building activities (protocol development, training, and simulation exercise) on community-based EWS to hazard-specific target barangays	CDRRMO, LNMB	PAGASA PHIVOLCS OCD DILG
All Hazards	SOP/guidelines on EWS formulated	Institutionalization of SOP/guidelines on EWS	SOP and guidelines on EWS Formulated	SOP and guidelines on EWS rolled-out to Barangays and CDRRMC member agencies	SOP and guidelines on EWS updated and rolled-out to Barangays and CDRRMC member agencies	CDRRMO, LNMB	PAGASA PHIVOLCS OCD DILG
All Hazards	PWD-inclusive EWS established	Establish PWD-inclusive EWS	Functional PWD-inclusive EWS	EWS for all vulnerable sectors established	EWS for all vulnerable sectors established	CDRRMO, CSWDO, PIO	
All Hazards	monitoring mechanism for protected areas institutionalized	Strict Monitoring of protected areas	monitoring mechanism for protected areas created	monitoring mechanism for protected areas strengthened	Mechanism for protected areas institutionalized and reflected to policies and systems	ENRO	DENR

DISASTER PREVENTION AND MITTIGATION							
Hazard	Target	Programs, Projects and Activities (PPAs)	Output / Timeframe 2023-2025	Output / Timeframe 2026-2028	Output / Timeframe 2029-2032	Office/s Responsible	Partner Agencies
All Hazards	alternative livelihood program provided for disaster victims	Alternative livelihood options for Disaster Victims	alternative livelihood options available for Disaster Victims	alternative livelihood options available for Disaster Victims	alternative livelihood options available and expanded disaster rehabilitation program for Disaster Victims	CSWDO, PESO	
All Hazards	Business stakeholders trained/capacitated on risk financing	Conduct of IEC on risk financing in the business sector	IEC on risk financing to target business sector conducted	IEC on risk financing to target business sector conducted	IEC on risk financing all business sector stakeholders conducted	BPLO, CDRRMO	
All Hazards	National funding provided for Local DRR PPAs	Access National funding for housing units	signed partnerships with NGAs for funds access intended for housing		provided housing and settlement for target beneficiaries	MO, SB, OCHO	DILG, CCC, DPWH, DBM
All Hazards	policy crafted and program implemented on redesigning house units	Establish innovations in redesigning housing units	Capacity building conducted in exploring and training on innovations in redesigning housing units	50 experts; 10 trained trainer	Disaster-resilient housing units installed and reflected to policies	CPDO, CEO	NHA, PAG-IBIG
All Hazards	solar panels installed	Installation of solar panels	solar panels installed to target facilities and infrastructures	solar panels installed to target facilities and infrastructures	solar panels installed to all critical facilities and infrastructures	CDRRMO, CGSO, ORWASA	DPWH
At least 2 Hazards	__ e-jeepneys procured	Procurement and deployment of e-jeepneys	E-jeepneys procured		full institutionalization of the use and deployment of e-jeepneys	CDRRMO, City Traffic Office	LTFRB, DOST
At least 3 Hazards	capability building activities conducted on waste to energy technology	Waste to energy technology deployment	training on waste to energy technology deployment conducted to specific personnel	training on waste to energy technology deployment conducted to specific personnel	introduction and institutionalization of waste to energy technology to all barangays	ENRO	DENR
At least 4 Hazards	farmers provided with crop insurance	Comprehensive enlistment of farmers to crop insurance	list of target farmer beneficiaries created; provision of crop insurance to affected farmers and fisherfolks	list of target farmer beneficiaries created; provision of crop insurance to affected farmers and fisherfolks	all farmers provided with crop insurance	CDRRMO, CAO	
All Hazards	fish attracting devices constructed	Construction of fish attracting devices	constructed 6 units fish attracting devices; and training on the use of device to concerned stakeholders conducted	constructed 18 units fish attracting devices; and training on the use of device to concerned stakeholders conducted	constructed additional fish attracting devices	CAD	BFAR 8
At least 3 Hazards	Artificial Habitat established	Construction & establishment of artificial habitats	artificial habitats constructed and installed		expanding areas provided with artificial reefs	CENROcad,	
All Hazards	fish port complex constructed	Design and development of fish port complex	fish port complex constructed	Constructed and maintained 1 Fish Port Complex	maintenance of fish port complex	CEO, CAO	
Tsunami	beach forest project implemented	Beach forest project	beach forest project initiated and necessary orientation and trainings conducted	Continuing beach forest project and mangrove growing	Beach forest project completed People's organizations trained on ecotourism management	CENRO, CPDO	DENR
All Hazards	capability building activities on toilet design study	Toilet design study and implementation	capability building activities on toilet design study conducted to concerned stake holders	30 experts trained; 10 trained trainers	toilet design study results implemented and institutionalized	CPDO, CEO	
All Hazards	Slope protection technology installed	Installation of slope protection technology	slope protection technology installed	5 barangays installed slope protection and maintained	15 additional slope protection technology installed	CEO, CDRRMO	
All Hazards	tourist hubs constructed	Tourist hubs development	tourist hubs identified with manpower complement and required trainings	tourist hubs constructed with manpower complement and required trainings	tourist hubs constructed	TOURISM OFFICE, CEO	DOT

DISASTER PREVENTION AND MITTIGATION							
Hazard	Target	Programs, Projects and Activities (PPAs)	Output / Timeframe 2023-2025	Output / Timeframe 2026-2028	Output / Timeframe 2029-2032	Office/s Responsible	Partner Agencies
All Hazards	100 rainwater harvester installed	Installation of rainwater harvester	100 rainwater harvester installed	100 rainwater harvester installed including water filtration system	Public Buildings, additional rainwater harvester installed	CDRRMO, CEO	
All Hazards	City and Barangay roads, sidewalks and drainage system	Improvement of roads, sidewalks, and drainage system	roads and sidewalks paved, repaired and improved, repairs and expansion for the drainage system conducted	10,000 linear meter on roads; 6,000 linear meter on sidewalks ; 10,000 linear meter on drainage	road expansions, new roads built and opened, sidewalks repaired and maintained, and improved drainage system	CEO	DPWH
Flood	water treatment facility installed	Installation of water treatment facility			Additional water treatment facility	ORWASA, CEO, CPDO	DPWH, National & International Agencies
At least 5 Hazards	acquisition and development of lot areas for park development	Comprehensive parks development	Acquistion and lot procurement on target areas for park development		establishment of park development areas	CAD, CENRO	BFAR 8, DENR 8
At least 2 Hazards	Rehabilitated / Constructed / Installed Irrigation System	• Rehabilitation Irrigation Canals • Solar powered (SPIS) • Small Scale irrigation system (SSIP) • Pump Irrigation system for open source (PISOS) • Diversion Dam (DD)	Rehabilitated irrigation canals Installed 3 SSIP Installed 15 PISOS	Constructed and installed 7 SPIS	Constructed and Installed 3 Diversion Dams	CAO, CEO	Department of Agriculture and Bureau of Soil and Water management
All Hazards	Buffer seed stocks storage facilities constructed	· Design and development of post-harvest and buffer stock facilities	Buffer seed stocks and post-harvest storage facilities constructed	construction of storage facility		CAO, CEO	
All Hazards	Business continuity plans of MSMEs crafted	Formulation of policy granting incentives to MSMEs with BCP	Policy granting incentives to MSMEs with BCP				
All Hazards	Transformed informal economy to formal economy	Formulation of policy granting incentives to transformed informal businesses	Policy granting incentives to transformed informal businesses				
At least 2 Hazards	installation of solar streetlighting	Solar Street lightings	Decrease electric consumption cost & carbon emission	Decrease electric consumption cost & carbon emission	Decrease electric consumption cost & carbon emission	CGSO	
All Hazards	LGU-Managed Loan Facility for MSMEs	Establishment of LGU-Managed Loan Facility	LGU-Managed Loan Facility for MSMEs				
All Hazards	Standard BCP template for MSMEs in Ormoc City	Institutionalize BCP template for the MSMEs in Ormoc City	Standard BCP template for MSMEs in Ormoc City				
All Hazards	areas without/insufficient water supply	Construction of additional water sources			Accessible, available, reliable, sufficient and disaster resilient water system in Ormoc City	ORWASA, CEO, CPDO	DPWH & other National Agencies
At least 2 Hazards	Established 6 Automated Weather Station (AWS)	Procurement , establishment & installation of AWS	Real time Weather information	Calibrated AWS	Replaced AWS unit	CAD	DRRM, PAG-ASA
All Hazards	Identification of suitable tree species	Forest resources and species suitability study	Forest resources and species suitability study			ENRO	DENR, EDC, VSU

DISASTER PREVENTION AND MITTIGATION							
Hazard	Target	Programs, Projects and Activities (PPAs)	Output / Timeframe 2023-2025	Output / Timeframe 2026-2028	Output / Timeframe 2029-2032	Office/s Responsible	Partner Agencies
All Hazards	Delineation and management of watershed	Watershed characterization study	Watershed characterization study			ENRO	DENR, EDC, VSU
Flood	10 percent of denuded area as of CY2023	Reforestation to denuded areas (CBFM, TREE GROWING, ARBOR DAY, NGP, FLUP)	3 percent of denuded area as of CY2023	8 percent of denuded area as of CY2023	10 percent of denuded area as of CY2023	ENRO	DENR, EDC, VSU
Flood	10 Pos organized/capacitated for CBFM project sites	Capacity Building on People's Organization (CBFM Project sites)	3 Pos organized/capacitated for CBFM project sites	8 Pos organized/capacitated for CBFM project sites	10 Pos organized/capacitated for CBFM project sites	ENRO	DENR, EDC, VSU
Flood	10 percent of priority riparian forests	Restoration of riparian and sub watershed areas (Malbasag River, Pagsanga-an River, Haubon River	3 percent of priority riparian forests	8 percent of priority riparian forests	10 percent of priority riparian forests	ENRO	DENR, EDC, VSU
All Hazards	Identification of suitable tree species	Coastal resource and species suitability study	Coastal resource and species suitability study			ENRO with Fishery, Coastal and Aquatic Resources Management Division	DENR, BFAR, VSU
All Hazards	Management of Coastal Resources and Zone	Coastal resource management plan formulation	Coastal resource management plan			ENRO with Fishery, Coastal and Aquatic Resources Management Division	DENR, BFAR, VSU
Flood	20 percent of the restored mangrove forests in priority areas	Mangrove restoration/ expansion and protection (Macabug, San Antonio, Linao, Naungan, San Juan, Lao and other Ormoc mangrove areas.	6 percent of the restored mangrove forests in priority areas	16 percent of the restored mangrove forests in priority areas	20 percent of the restored mangrove forests in priority areas	ENRO with Fishery, Coastal and Aquatic Resources Management Division	DENR, BFAR, VSU
All Hazards	Identification of critical waste management infrastructure	Structure assessment study of Solid Waste Management Infrastructure assets	Structure assessment study of Solid Waste Management Infrastructure assets			ENRO & CEO	DPWH
All Hazards	Disaster proof Solid Waste Infrastructures	Retrofitting of Sanitary Landfill, MRFs, Waste Pick-up points	Disaster proof Solid Waste Infrastructures	Disaster proof Solid Waste Infrastructures		ENRO & CEO	DPWH
All Hazards	Purchase and installation of EWS equipment	Establishment and support for Ormoc City DRRM Operations Center Integrated Multi-hazard Early Warning System	Functional CCTV monitoring systems and hazard monitoring device/equipment in-place			CDRRMO	DOST PAGASA, DOST PHIVOLCS, MGB
All Hazards	Lot acquisition to support DRRM and CCAM initiatives	Lot Acquisition for Various DRRM Development Programs	Identification of safe and suitable lot	Identification of safe and suitable lot	Lot acquisition	CPDO

CHAPTER 5: RESULTS-BASED MONITORING AND EVALUATION

MONITORING AND EVALUATION

The previous LDRRMP assumes physical and financial monitoring of the plan in addition to the presence and absence of statutory mandates. In addition, performance assessment of the City and the Local DRRM Office is done through national level assessment (e.g Gawad Kalasag, National Resilience Council). It does not provide for outcome- or impact-based monitoring and evaluation linked with sector outcomes to measure their resilience.

The LDRRMP 2022-2032 envisions the integration of the Ten Essentials for Making Cities Resilient (UNDRR) as the base for monitoring in measuring the city's resilience. This will be overlain with indicators from the updated NDRRMP 2020-2030 (NDRRMC) for programs, projects, and activities for alignment. As an additional layer, internal capacities of the LDRRM Office will be aligned with the capacity pillars to also monitor internal strengthening of the office. Finally, to ensure contribution with regional and sub-regional goals indicators are also adopted from Sendai Framework for Disaster Risk Reduction (UNDRR) and the Regional Development Plan (NEDA-RDC VIII).

Table 33. Integrated Criteria for Results-based Monitoring and Evaluation

BASE	OVERLAYS		INDICATORS	
10 Essentials for Making Cities Resilient (UNDRR)	NDRRMP 2020-2030 (NDRRMC)	Capacity development pillars (DILG-LGA)	Sendai Framework for Disaster Risk Reduction (UNDRR)	Regional Development Plan
Essential 1-10	*Outcomes 1-23 (lumped in three Key Result Areas)*	*Pillars 1-6*	*Target A-G*	*TBD*
1. Organize for Disaster Resilience 2. Identify, understand, and use Current and Future Risk Scenarios 3. Strengthen Financial Capacity for Resilience 4. Pursue Resilient Urban Development and Design 5. Safeguard Natural Buffers to enhance Ecosystems' Protective Functions 6. Strengthen Institutional Capacity for Resilience 7. Understand and Strengthen Societal Capacity for Resilience 8. Increase Infrastructure Resilience 9. Ensure Effective Disaster Response 10. Expedite Recovery and Build Back Better	1. Disaster Risk Reduction 2. Disaster Preparedness and Response 3. Build Back Better	1. Structure 2. Competency 3. Management systems 4. Enabling policies 5. Knowledge and learning 6. Leadership	A. Substantially reduce global disaster mortality by 2030, aiming to lower average per 100,000 global mortalities between 2020-2030 B. Substantially reduce the number of affected people globally by 2030, aiming to lower the average global figure per 100,000 between 2020-2030 compared with 2005-2015 C. Reduce direct disaster economic loss in relation to global gross domestic product (GDP) by 2030 D. Substantially reduce disaster damage to critical infrastructure and disruption of basic services, among them health and educational facilities, including through developing their resilience by 2030 E. Substantially increase the number of countries with national and local disaster risk reduction strategies by 2020 F. Substantially enhance international cooperation to developing countries through adequate and sustainable support to complement their national actions for implementation of this framework by 2030 G. Substantially increase the availability of and access to multi-hazard early warning systems and disaster risk information and assessments to the people by 2030	TBD

The monitoring and evaluation (M&E) reinforces the following principles:

1. Progress monitoring involves status of implementation of PPAs with respect to inputs, outputs and processes.
2. Outcome monitoring is selective for big ticket projects to determine whether the objectives and target outcomes across each sector of the local resilience framework are achieved.
3. M&E shall be based on the Local Resilience Framework which defines the over-all outcomes and output indicators.
4. Linked, inter-operable, and information sharing enabled web-based and/or offline (i.e. MS Excel) tracking tools are utilized with the minimum key features as follows:
    a. Simple, user-friendly, and cost-efficient
    b. Accessible for local offices, national and regional government agencies, and other stakeholders
    c. Captures information required for fiscal responsibility monitoring (i.e. DBM/COA/OCD forms)

The M&E process, as illustrated in the proceeding figure, takes-on a five-step cycle process.

1. **Gathering and consequent updating of baseline data.** Baseline information of the LDRRMP must be established based on existing socio-economic indicators available at the local, regional, and national levels. Initial scoping must be conducted. The baseline data will be cross-tabulated with the indicators required by Making Cities Resilient, NDRRMP 2020-2030, LGU CapDev Agenda, SFDRR, and the Region RDP. This will ensure alignment and attribution.

2. **Confirmation and vetting of indicators**. Existing indicators shall be vetted against the outcomes of the LDRRMP. Gaps will be determined and addressed such as the lack of local data. Proxy indicators can be developed and agreed by the LDRRMC/O in consultation with the appropriate local office.

3. **Actual data collection from planned outputs.** Responsible implementing local office/body shall conduct data collection of their respective program, project, and activity. They shall also be responsible for data inputs that are generated from the national and regional level if available. Issues and challenges in implementation should be highlighted. A problem-solving session must be conducted to address the documented issues and challenges.

4. **Assessment of program design, implementation, and result.** Based on the data collected, a multi stakeholder assessment (as much as possible) shall be facilitated. The program design and implementation strategies can be revised if necessary to achieve the desired targets within the timeframe planned. Assessment can also include the possibility of resource realignment.

5. **Impact assessment.** The conduct of impact assessment shall be after five years of plan implementation. The assessment shall describe the significant changes in knowledge, skill, behavior, or living conditions of Ormoc City's constituents.

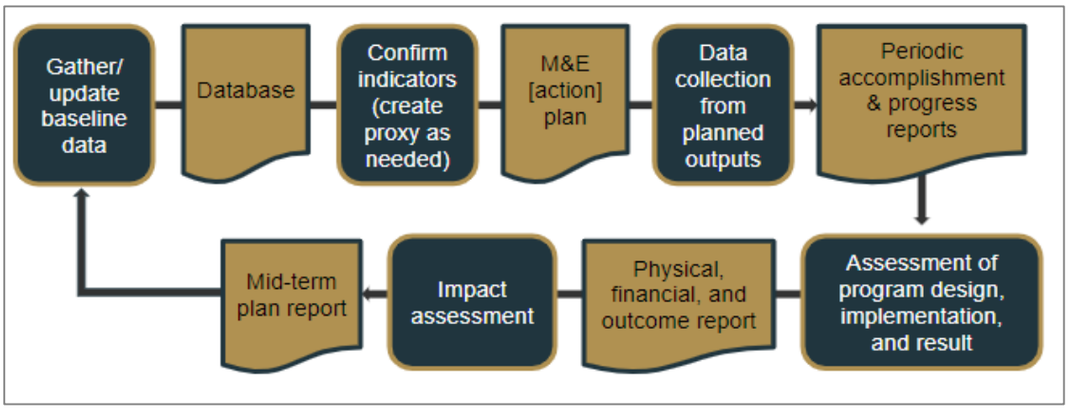

Figure 19. Monitoring and Evaluation Process

The M&E shall produce five (5) outputs with varying expected frequencies and schedules reflected in the preceding figure and summarized in the following table:

Table 34. Five Outputs from Monitoring and Evaluation

M&E Output	Frequency of output	Target schedule of output release
1. Database	Updating every three-years (term-based)	Short-term (in the next three years)
2. M&E [action] plan	Updating every three-years (term-based)	Short-term (year one of the LDRRMP)
3. Periodic accomplishment and progress report	Every year BUT can be progressive (i.e. quarterly or semester)	Every January of the proceeding year
4. Physical, financial, and outcome report	Every year	Every December of current year
5. Mid-term plan report	Every five (5) years	Year 2029

INSTITUTIONAL MECHANISM

M&E is only effective if there is a coordinated and concerted effort and commitment of local offices and bodies in regularly submitting accomplishment and progress reports to the LDRRMO. In turn, it is the task of the LDRRMO to integrate the reports and align the same with the outcomes of the LDRRMP and related DRR-CCA regional and national commitments. An RBME tool will be adopted for easier integration. The RBME report shall be presented to the LDRRMC and LDC for endorsement to oversight regional and national agencies as required by RA 10121.

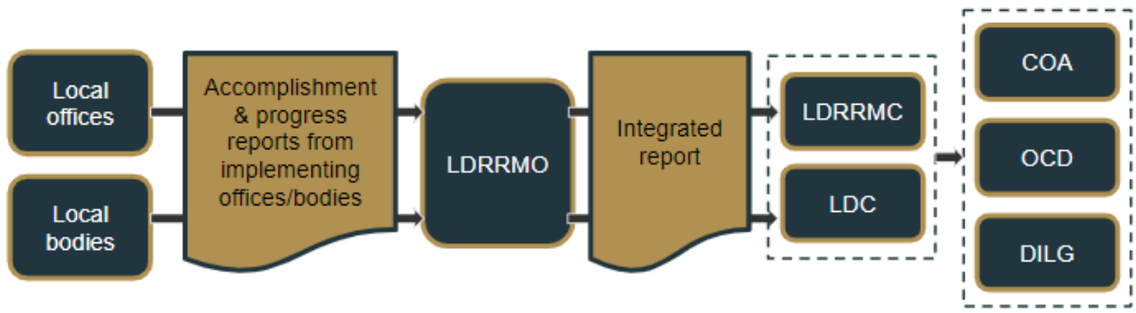

Figure 20. Monitoring & Evaluation Institutional Mechanism

MONITORING TOOL

The monitoring tool (Form 5 D) components are prescribed in the following table:

Table 35. Monitoring tools

[1]	[2]	[3]	[4]		[5]		[6]		
PPA	PPA Classification	Sector	Financial		Physical		Indicator		
			[4.1] Allocation	[4.2] Actual	[5.1] Timeframe	[5.2] Actual	[6.1] Baseline	[6.2] MOV	[6.3] Actual

[1] PPA refers to the identified programs, projects, and activities by the LDRRMC/O and the local offices/bodies. The responsible office can be indicated as well in this column.

[2] PPA Classification is the major classification that clusters the PPAs in the short-, medium-, and long-terms (e.g. science-based assessment, institutionalization, social preparation, capacity building, construction, etc.).

[3] Sector is the medium-term outcome and focus area in the Local Resilience Framework.

[4] Financial Accomplishment identifies the allocated budget *[4.1]* and the actual expense *[4.2]* in implementing the program. Note the over and underutilization of the budget as an issue in the assessment.

[5] Physical Accomplishment is the percentage of completion of the PPA *[5.2]* as of date of report (quarterly, semestral, or annual). The timeframe *[5.1]* is the schedule of implementation (e.g. start and end of implementation).

[6] Indicator refers to the agreed quantitative metric of the medium-term outcome and focus area in the Local Resilience Framework where the PPA contributes to (e.g. number of beneficiaries, number of days of business restoration after a disaster). This includes the baseline data *[6.1]* that shall be utilized for progress tracking (e.g. number of evacuation centers already constructed); the mode of verification *[6.2]* that serves as proof and reference for the achievement of the indicator (e.g. project completion report); and, the actual *[6.3]* accomplishment for the indicator (e.g. three evacuation centers centers constructed).
